

# ZED-F9T

## u-blox F9 high accuracy timing module

### Interface Description

#### Abstract

This document describes the interface (version 29.11) of the ZED-F9T, a multi-band GNSS module offering nanosecond-level timing accuracy.

## Document information

<b>Title</b>	<b>ZED-F9T</b>		
<b>Subtitle</b>	u-blox F9 high accuracy timing module		
<b>Document type</b>	Interface Description		
<b>Document number</b>	UBX-20033631		
<b>Revision and date</b>	R05		30-Jun-2021
<b>Document status</b>	Early Production Information		
<b>Disclosure restriction</b>	C1-Public		

This document applies to the following products:

<b>Product name</b>	<b>Type number</b>	<b>Firmware version</b>	<b>PCN reference</b>
ZED-F9T	ZED-F9T-10B-00	TIM 2.13	N/A

<b>1 General information.....</b>	<b>13</b>
1.1 Document overview.....	13
1.2 Firmware and protocol versions.....	13
1.3 Receiver configuration.....	15
1.4 Naming.....	15
1.5 GNSS, satellite and signal identifiers.....	16
1.5.1 Overview.....	16
1.5.2 GNSS identifiers.....	17
1.5.3 Satellite identifiers.....	17
1.5.4 Signal identifiers.....	18
1.6 Message types.....	19
<b>2 NMEA protocol.....</b>	<b>20</b>
2.1 NMEA frame structure.....	20
2.2 NMEA protocol configuration.....	20
2.3 NMEA-proprietary messages.....	21
2.4 NMEA multi-GNSS operation.....	22
2.5 NMEA data fields.....	22
2.5.1 NMEA Talker ID.....	22
2.5.2 NMEA extra fields.....	22
2.5.3 NMEA latitude and longitude format.....	23
2.5.4 NMEA GNSS, satellite and signal numbering.....	23
2.5.5 NMEA position fix flags.....	23
2.5.6 NMEA output of invalid or unknown data.....	24
2.6 NMEA messages overview.....	25
2.7 Standard messages.....	26
2.7.1 DTM.....	26
2.7.1.1 Datum reference.....	26
2.7.2 GAQ.....	26
2.7.2.1 Poll a standard message (Talker ID GA).....	26
2.7.3 GBQ.....	27
2.7.3.1 Poll a standard message (Talker ID GB).....	27
2.7.4 GBS.....	27
2.7.4.1 GNSS satellite fault detection.....	27
2.7.5 GGA.....	28
2.7.5.1 Global positioning system fix data.....	28
2.7.6 GLL.....	29
2.7.6.1 Latitude and longitude, with time of position fix and status.....	29
2.7.7 GLQ.....	29
2.7.7.1 Poll a standard message (Talker ID GL).....	30
2.7.8 GNQ.....	30
2.7.8.1 Poll a standard message (Talker ID GN).....	30
2.7.9 GNS.....	30
2.7.9.1 GNSS fix data.....	30
2.7.10 GPQ.....	31
2.7.10.1 Poll a standard message (Talker ID GP).....	31

2.7.11 GQQ.....	32
2.7.11.1 Poll a standard message (Talker ID GQ).....	32
2.7.12 GRS.....	32
2.7.12.1 GNSS range residuals.....	32
2.7.13 GSA.....	33
2.7.13.1 GNSS DOP and active satellites.....	33
2.7.14 GST.....	33
2.7.14.1 GNSS pseudorange error statistics.....	34
2.7.15 GSV.....	34
2.7.15.1 GNSS satellites in view.....	34
2.7.16 RLM.....	35
2.7.16.1 Return link message (RLM).....	35
2.7.17 RMC.....	36
2.7.17.1 Recommended minimum data.....	36

# 1 General information

## 1.1 Document overview

This document describes the interface of the u-blox F9 high accuracy timing module. The interface consists of the following parts:

- [NMEA protocol](#)
- [UBX protocol](#)
- [RTCM protocol](#)
- [Configuration interface](#)

See also [Related documents](#).

This document describes features that are common to many different u-blox GNSS and correction data receivers. Some of these features may not be available in ZED-F9T-10B, and some may require specific configurations to be enabled. See the [Data sheet](#) of your specific product for availability and the [Integration manual](#) for instructions for enabling the features.

Previous versions of u-blox receiver documentation combined general receiver description and interface specification. In the current documentation the receiver description is included in the [Integration manual](#).

## 1.2 Firmware and protocol versions

u-blox generation 9 receivers execute firmware from internal ROM or from internal code-RAM. If the firmware image is stored in a flash it is loaded into the code-RAM before execution. It is also possible to store the firmware image in the host system. The firmware is then loaded into the code-RAM from the host processor. (Loading the firmware from the host processor is not supported in all products.) If there is no external firmware image, then the firmware is executed from the ROM.

The location and the version of the boot loader and the currently running firmware can be found in the boot screen and in the [UBX-MON-VER](#) message. If the firmware has been loaded from a connected flash or from the host processor, it is indicated by text "EXT". When the receiver is started, the boot screen is output automatically in [UBX-INF-NOTICE](#) or [NMEA-Standard-TXT](#) messages if configured using [CFG-INFMSG](#). The [UBX-MON-VER](#) message can be polled using the [UBX polling mechanism](#).

The following u-center screenshots show an example of a u-blox receiver running firmware loaded from flash:

```

The following information is available (✓) from the boot screen (B) and the UBX-MON-VER message (M):

B	M	Example	Information
✓		u-blox AG - www.u-blox.com	Start of the boot screen.
✓		HW UBX 9 00190000	Hardware version of the u-blox receiver.
✓	✓	00190000	
✓	✓	EXT CORE 1.00 (61b2dd)	Base (CORE) firmware version and revision number, loaded from external memory (EXT).
		EXT LAP 1.00 (12a3bc)	Product firmware version and revision number, loaded from external memory (EXT). Available only in some firmware versions. See below for a list of product acronyms.
✓	✓	ROM BASE 0x118B2060	Revision number of the underlying boot loader firmware in ROM.
✓	✓	FWVER=HPG 1.12	Product firmware version number, where: <ul style="list-style-type: none"> <li>• SPG = Standard precision GNSS product</li> <li>• HPG = High precision GNSS product</li> <li>• ADR = Dead reckoning product</li> <li>• TIM = Time sync product</li> <li>• LAP = Lane accurate positioning product</li> <li>• HPS = High precision sensor fusion product</li> <li>• DBS = Dual band standard precision</li> </ul>
✓	✓	PROTVER=34.00	Supported protocol version.
✓	✓	MOD=ZED-F9P	Module name (if available).
✓	✓	GPS;GLO;GAL;BDS	List of supported major GNSS (see <a href="#">GNSS identifiers</a> ).
✓	✓	SBAS;QZSS	List of supported augmentation systems (see <a href="#">GNSS identifiers</a> ).
✓		ANTSUPERV=AC SD PDoS SR	Configuration of the antenna supervisor (if available), where: <ul style="list-style-type: none"> <li>• AC = Active antenna control enabled</li> <li>• SD = Short circuit detection enabled</li> <li>• OD = Open circuit detection enabled</li> <li>• PDoS = Short circuit power down logic enabled</li> <li>• SR = Automatic recovery from short state enabled</li> </ul>
✓		PF=FFF79	Product configuration.

The "FWVER" product firmware version indicates which firmware is currently running. This is referred to as "firmware version" in this and other documents.

-  The revision numbers should only be used to identify a known firmware version. They are not necessarily numeric nor are they guaranteed to increase with newer firmware versions.
-  Similarly, firmware version numbers can have additional non-numeric information appended, such as in "5.00B03".
-  Not every entry is output by all u-blox receivers. The availability of some of the information depends on the product, the firmware location and the firmware version.

The product firmware version and the base firmware version relate to the protocol version:

Product firmware version	Base firmware version	Protocol version
TIM 2.00	EXT CORE 1.00 (264600)	29.00
TIM 2.01	EXT CORE 1.00 (71b20c)	29.00
TIM 2.02B01	EXT CORE 1.00 (5481ba)	29.01
TIM 2.10B00	EXT CORE 1.00 (e8e1de)	29.10
TIM 2.10B01	EXT CORE 1.00 (092837)	29.10
TIM 2.11	EXT CORE 1.00 (08d8b4)	29.10
TIM 2.13	EXT CORE 1.00 (9db928)	29.11

## 1.3 Receiver configuration

u-blox positioning receivers are fully configurable with UBX protocol messages. The configuration used by the receiver during normal operation is called the "current configuration". The current configuration can be changed during normal operation by sending [UBX-CFG-VALSET](#) messages over any I/O port. The receiver will change its current configuration immediately after receiving a configuration message. The receiver will always use the current configuration only.

The current configuration is loaded from permanent configuration hard-coded in the receiver firmware (the defaults) and from non-volatile memory (user configuration) on startup of the receiver. Changes made to the current configuration at run-time will be lost when there is a power cycle, a hardware reset or a (complete) controlled software reset (see [Configuration reset behavior](#)).

See [Configuration interface](#) for a detailed description of the receiver configuration system, the explanation of the configuration concept and its principles and interfaces.

-  The configuration interface has changed from earlier u-blox positioning receivers. There is some backwards compatibility provided in UBX-CFG configuration messages. Users are strongly advised to only use the [Configuration interface](#). See also [Legacy UBX message fields reference](#).
-  See the [Integration manual](#) for a basic receiver configuration most commonly used.

## 1.4 Naming

Message names are written in full with the parts of the name separated by hyphens ("-"). The full message name consists of the protocol name (e.g., *UBX*), the class name (e.g. *NAV*) and the message name (e.g. *PVT*). For example the receiver software version information message is referred to as *UBX-MON-VER*. Similarly, the *NMEA-Standard-GGA* is the NMEA standard message (sentence) with the global positioning fix data.

References to fields of the message add the field name separated by a dot ("."), e.g. *UBX-MON-VER.swVersion*.

Some messages use a fourth level of naming, called the message version. One example is the *UBX-MGA-GPS* message for GPS assistance data, which exists in versions for ephemerides (*UBX-MGA-GPS-EPH*) and almanacs (*UBX-MGA-GPS-ALM*).

Names of configuration items are of the form *CFG-GROUP-ITEM*. For example, *CFG-NAVSPG-DYNMODEL* refers to the navigation dynamic platform model the receiver uses. Constants add a fourth level to the item name, such as *CFG-NAVSPG-DYNMODEL-AUTOMOT* for the automotive platform model. In the context of describing an item's value, only the last part of the constant name can be used (e.g. "set *CFG-NAVSPG-DYNMODEL* to *PORT* for portable applications").

## 1.5 GNSS, satellite and signal identifiers

### 1.5.1 Overview

The [UBX protocol](#) messages use two different numbering schemes. Some messages use a one-byte (type U1) field for the satellite identifier (normally named *svId*). This uses numbering similar to the "extended" NMEA scheme and is merely an extension of the scheme in use for previous generations of u-blox receivers.

With the ever increasing numbers of GNSS satellites, this scheme has been phased out in recent u-blox positioning receivers (as numbers greater than 255 would have become necessary). Consequently, newer messages use a more sophisticated, flexible and future-proof approach. This involves having a separate *gnssId* field to identify which GNSS the satellite is part of and a simple *svId* (SV for space vehicle) field that indicates which number the satellite is in that system. In nearly all cases, this means that the *svId* is the natural number associated with the satellite. For example the GLONASS SV4 is identified as *gnssId 6*, *svId 4*, while the GPS SV4 is *gnssId 0*, *svId 4*.

Signal identifiers are used where different signals from a GNSS satellite need to be distinguished (e.g. in the [UBX-NAV-SIG](#) message). A separate *sigId* field is used. These identifiers are only valid when combined with a GNSS identifier (*gnssId* field).

The [NMEA protocol](#) (version 4.10 and later) identifies GNSS satellites with a one-digit system ID and a two-digit satellite number. u-blox receivers support this method in their NMEA output when "strict" SV numbering is selected. In most cases this is the default setting, but it can be checked or changed using the [Configuration interface](#) (see also [NMEA GNSS, satellite and signal numbering](#)).

In order to support some GNSS (e.g. BeiDou, Galileo, QZSS), which are not supported by some or all NMEA protocol versions, an "extended" SV numbering scheme can be enabled. This uses the NMEA-defined numbers where possible but adds other number ranges to support other GNSS. Note however that these non-standard extensions require 3-digit numbers, which may not be supported by some NMEA parsing software. For example, QZSS satellites use numbers in the range 193 to 202.

The NMEA standard defines signal identifiers to distinguish different signals sent by a single GNSS satellite (e.g. L2 CL and CM). u-blox positioning receivers use those identifiers for signal identification, as far as the corresponding standard is supported in a particular product.

Note that the following sections are a generic overview for different u-blox positioning receivers. A particular product may not support all of the described GNSS identifiers, satellite numbers, signal identifiers or combinations thereof.

### 1.5.2 GNSS identifiers

The following table lists each GNSS along with the GNSS identifiers ([UBX protocol](#)), the system IDs ([NMEA protocol](#)), and abbreviations used in this document:

GNSS	Abbreviations		UBX gnssId	NMEA system ID		
				2.3 - 4.0	4.10	4.11
GPS	GPS	G	0	1	1	1
SBAS	SBAS	S	1	1	1	1
Galileo	GAL	E	2	n/a	3	3
BeiDou	BDS	B	3	n/a	(4) <sup>1</sup>	4
IMES	IMES	I	4	n/a	n/a	n/a
QZSS	QZSS	Q	5	n/a	(1) <sup>1</sup>	5
GLONASS	GLO	R	6	2	2	2
NavIC	NavIC	N	7	n/a	n/a	6

Other values will be added when support for other GNSS types will be enabled in u-blox receivers.

See also [NMEA Talker ID](#).

### 1.5.3 Satellite identifiers

A summary of all the satellite numbering schemes used in the [NMEA protocol](#) and the [UBX protocol](#) is provided in the following table.

GNSS	SV Range	UBX Protocol		NMEA Protocol 2.3 - 4.0		NMEA Protocol 4.10		NMEA Protocol 4.11	
		gnssId:svId	single svId	(strict)	(extended)	(strict)	(extended)	(strict)	(extended)
GPS	G1-G32	0:1-32	1-32	1-32	1-32	1-32	1-32	1-32	1-32
SBAS	S120-S158	1:120-158	120-158	33-64	33-64, 152-158	33-64	33-64, 152-158	33-64	33-64, 152-158
Galileo	E1-E36	2:1-36	211-246	-	301-336	1-36	1-36	1-36	1-36
BeiDou	B1-B5	3:1-5	159-163	-	401-405	1-5	1-5	1-5	1-5
	B6-B37	3:6-37	33-64	-	406-437	6-37	6-37	6-37	6-37
	B38-B63	3:38-63	n/a	-	438-463	38-63	38-63	38-63	38-63
IMES	I1-I10	4:1-10	173-182	n/a	173-182	n/a	173-182	n/a	173-182
QZSS	Q1-Q10	5:1-10	193-202	n/a	193-202	n/a	193-202	1-10	1-10
GLONASS	R1-R32, R?	6:1-32, 6:255	65-96, 255	65-96, null	65-96, null	65-96, null	65-96, null	65-96, null	65-96, null
NavIC	N1-N7	7:1-7	247-253	n/a	n/a	n/a	n/a	n/a	n/a

Note that GLONASS satellites can be tracked before they have been identified. In UBX messages such unknown satellites will be reported with svId 255. In NMEA messages they will be null (empty)

<sup>1</sup> While not defined by NMEA 4.10, u-blox receivers in this mode will use system ID 4 for BeiDou and, if extended satellite numbering is enabled, system ID 1 for QZSS.

fields. Product-related documentation and u-center will use R? to label unidentified GLONASS satellites.

### 1.5.4 Signal identifiers

A summary of all the signal identification schemes used in the [NMEA protocol](#) and the [UBX protocol](#) is provided in the following table. (Only a subset of the signals is supported by each product.)

Signal	UBX Protocol		NMEA Protocol 4.10 <sup>5</sup>		NMEA Protocol 4.11 <sup>5</sup>	
	gnssId	sigId	System ID	Signal ID	System ID	Signal ID
GPS L1C/A <sup>2</sup>	0	0	1	1	1	1
GPS L2 CL	0	3	1	6	1	6

<sup>2</sup> UBX messages that do not have an explicit `sigId` field contain information about the subset of signals marked.

<sup>3</sup> While not defined by NMEA 4.10, u-blox receivers in this mode will use system ID 4 for BeiDou and, if extended satellite numbering is enabled, system ID 1 for QZSS.

<sup>4</sup> BeiDou and QZSS signal ID are not defined in the NMEA protocol version 4.10. Values shown in the table are only valid for u-blox products and, for QZSS signal ID, if extended satellite numbering is enabled.

<sup>5</sup> NMEA System ID and Signal ID are in hexadecimal format.

## 1.6 Message types

The following message types are defined:

Message type	Description
Input	Messages that are input to the receiver and never output. E.g. <a href="#">UBX-MGA-GPS-EPH</a> .
Output	Messages that are output by the receiver in no particular interval and never input. E.g. <a href="#">UBX-ACK-ACK</a> .
Input/output	Messages that can be output by or input to the receiver. E.g. <a href="#">UBX-MGA-DBD-DATA0</a> .
Periodic	Messages that are output in regular intervals but cannot be polled. E.g. <a href="#">UBX-NAV-EOE</a> .
Periodic/pollable	Messages that are output in regular intervals and can be polled. E.g. <a href="#">UBX-NAV-PVT</a> .
Command	Messages that are a command to the receiver. Similar to type <i>Input</i> these are input-only. E.g. <a href="#">UBX-CFG-RST</a> .
Get	Output-only configuration or command messages. E.g. <a href="#">UBX-CFG-DAT</a> .
Set	Input-only configuration or command messages. E.g. <a href="#">UBX-CFG-VALDEL</a> .
Get/set	Input/output configuration or command messages. E.g. <a href="#">UBX-CFG-NAVX5</a> .
Polled	Non-periodic messages that can only be polled. E.g. <a href="#">UBX-MON-VER</a> .
Poll request	Poll request. E.g. <a href="#">UBX-MGA-DBD-POLL</a> .

## 2 NMEA protocol

The following sections give an overview of the NMEA messages used by u-blox positioning receivers.

By default, the NMEA messages sent by u-blox positioning receivers are based on the NMEA 0183 version 4.11 standard. For further information on the NMEA standard, refer to the *NMEA 0183 Standard for Interfacing Marine Electronic Devices*, Version 4.11, November 2018, which is available on <http://www.nmea.org/>.

### 2.1 NMEA frame structure

The following figure shows the structure of a NMEA protocol message (called "sentences" in the standard).

#### Example

\$	GP	ZDA	,141644.00,22,03,2002,00,00	*67	\r\n
----	----	-----	-----------------------------	-----	------

### 2.2 NMEA protocol configuration

The [NMEA protocol](#) on u-blox receivers can be configured for customer applications by using the [Configuration interface](#) (CFG-NMEA-\* items).

Several NMEA standard versions are supported. Version 4.11 (not in all products), 4.10, 4.00, 2.3, or 2.1 can be configured. See [Configuration defaults](#) for the default version. See [CFG-NMEA-PROTVER](#) to configure the version. See [NMEA multi-GNSS operation](#) and [NMEA data fields](#) for details on how this affects the output.

The following filtering flags can be used to configure the output of some NMEA message fields:

Filter	Configuration Item	Description
Position filtering	<a href="#">CFG-NMEA-OUT_INVFIX</a>	Enable to permit positions from failed or invalid fixes to be reported (with the "V" status flag to indicate that the data is not valid).
Valid position filtering	<a href="#">CFG-NMEA-OUT_MSKFIX</a>	Enable to permit positions from invalid fixes to be reported (with the "V" status flag to indicate that the data is not valid).
Time filtering	<a href="#">CFG-NMEA-OUT_INVTIME</a>	Enable to permit the receiver's best knowledge of time to be output, even though it might be wrong.

Filter	Configuration Item	Description
Date filtering	<a href="#">CFG-NMEA-OUT_INVDATE</a>	Enable to permit the receiver's best knowledge of date to be output, even though it might be wrong.
GPS-only filtering	<a href="#">CFG-NMEA-OUT_ONLYGPS</a>	Enable to restrict output to only report GPS satellites.
Track filtering	<a href="#">CFG-NMEA-OUT_FROZENCOD</a>	Enable to permit course over ground (COG) to be reported even when it would otherwise be frozen.

The following filtering flags can be used to configure the output of some NMEA message flags:

Mode	Configuration Item	Description
Compatibility mode	<a href="#">CFG-NMEA-COMPAT</a>	Some older NMEA applications expect the NMEA output to be formatted in a specific way, for example, they will only work if the latitude and longitude have exactly four digits behind the decimal point. u-blox receivers offer a compatibility mode to support these legacy applications.
Consideration mode	<a href="#">CFG-NMEA-CONSIDER</a>	u-blox receivers use a sophisticated signal quality detection scheme, in order to produce the best possible position output. This algorithm considers all SV measurements, and may eventually decide to only use a subset thereof, if it improves the overall position accuracy. If consideration mode is enabled, all satellites, which were considered for navigation, are communicated as being used for the position determination. If consideration mode is disabled, only those satellites which after the consideration step remained in the position output are marked as being used.
Limit length mode	<a href="#">CFG-NMEA-LIMIT82</a>	Enabling this mode will limit the NMEA sentence length to a maximum of 82 characters.
High precision mode	<a href="#">CFG-NMEA-HIGHPREC</a>	Enabling this mode increases precision of the position output. Latitude and longitude then have seven digits after the decimal point, and altitude has three digits after the decimal point. Note: The high precision mode cannot be set in conjunction with either compatibility mode or Limit82 mode.

The following extended configuration options are available:

Option	Configuration Item(s)	Description
GNSS to filter	<a href="#">CFG-NMEA-FILT_GPS</a> etc.	Filters satellites based on the GNSS they belong to.
Satellite numbering	<a href="#">CFG-NMEA-SVNUMBERING</a>	This field configures the display of satellites that do not have an NMEA-defined value. Note: this does not apply to satellites with an unknown ID. See also <a href="#">Satellite identifiers</a> .
Main Talker ID	<a href="#">CFG-NMEA-MAINTALKERID</a>	By default the main Talker ID (i.e. the Talker ID used for all messages other than GSV) is determined by the GNSS assignment of the receiver's channels (see configuration items <a href="#">CFG-SIGNAL*</a> ). This field enables the main Talker ID to be overridden. See also <a href="#">NMEA Talker ID</a> .
GSV Talker ID	<a href="#">CFG-NMEA-GSVTALKERID</a>	By default the Talker ID for GSV messages is GNSS-specific (as defined by NMEA). This field enables the GSV Talker ID to be overridden.
BDS Talker ID	<a href="#">CFG-NMEA-BDSTALKERID</a>	By default the Talker ID for BeiDou is "GB". This field enables the BeiDou Talker ID to be overridden.

## 2.3 NMEA-proprietary messages

The NMEA standard allows for proprietary, manufacturer-specific messages to be added. These shall be marked with a manufacturer mnemonic. The mnemonic assigned to u-blox is UBX and is used for all non-standard messages. These proprietary NMEA messages therefore have the address field set to PUBX. The first data field in a PUBX message identifies the message number with two digits.

## 2.4 NMEA multi-GNSS operation

Many applications that process NMEA messages assume that only a single GNSS is active. However, when multiple GNSS are configured, the NMEA specification requires the output to change in the following ways:

**Main Talker ID** The main [NMEA Talker ID](#) will be "GN" (e.g. instead of "GP" for a GPS-only receiver).

**GSV Talker IDs** The [GSV](#) message reports the signal strength of the visible satellites. However, the Talker ID it uses is specific to the GNSS it is reporting information for, so for a multi-GNSS receiver it will not be the same as the main Talker ID. While other messages use the "GN" Talker ID, the GSV message will use GNSS-specific Talker IDs. See also [NMEA protocol configuration](#).

**Multiple GSA and GRS messages** Multiple [GSA](#) and [GRS](#) messages are output for each fix, one for each GNSS. This may confuse applications that assume they are output only once per position fix (as is the case for a single GNSS receiver).

**GGA Talker IDs** The NMEA specification indicates that the GGA message is GPS-specific. However, u-blox receivers support the output of a GGA message for each of the Talker IDs.

**BeiDou and Galileo** Only NMEA version 4.10 and later have support for these systems.

**QZSS** Only NMEA version 4.11 and later have support for this system.

**Extended satellite numbering** In order to support some GNSS (e.g. BeiDou, Galileo, QZSS) that are not supported by some or all NMEA protocol versions, an "extended" SV numbering scheme can be enabled. This uses the NMEA-defined numbers where possible, but adds other number ranges to support other GNSS. Note however that these non-standard extensions require 3-digit numbers, which may not be supported by some NMEA parsing software. For example, QZSS satellites use numbers in the range 193 to 202. See [NMEA protocol configuration](#) and [Satellite identifiers](#).

## 2.5 NMEA data fields

Various data fields in NMEA messages depend on [NMEA protocol configuration](#) or require a definition for their interpretation.

### 2.5.1 NMEA Talker ID

One of the ways the NMEA standard differs depending on the GNSS is by using a two-letter message identifier, the "Talker ID". The specific Talker ID used by a u-blox receiver will depend on the product and its configuration. The table below shows the Talker ID that will be used for various GNSS configurations by default.

GNSS	Talker ID	Comments
GPS, SBAS	GP	NMEA 2.3+
GLONASS	GL	NMEA 2.3+
Galileo	GA	NMEA 4.10+
BeiDou	GB	NMEA 4.10+ (official NMEA only since 4.11)
NavIC	GI	NMEA 4.11+
QZSS	GQ	NMEA 4.11+ (GP for NMEA 2.3 - 4.10)
Any combination of GNSS	GN	

### 2.5.2 NMEA extra fields

The following extra fields are available in NMEA 4.10 and later.

Message	Extra fields
NMEA-Standard-GBS	systemId and signalId
NMEA-Standard-GNS	navStatus
NMEA-Standard-GRS	systemId and signalId
NMEA-Standard-GSA	systemId
NMEA-Standard-GSV	signalId
NMEA-Standard-RMC	navStatus

### 2.5.3 NMEA latitude and longitude format

According to the NMEA standard, latitude and longitude are output in the format *degrees, minutes and (decimal) fractions of minutes*. To convert to *degrees and fractions of degrees*, or *degrees, minutes, seconds and fractions of seconds*, the *minutes* and *fractional minutes* parts need to be converted. For example:

Format	Latitude	Longitude
Receiver output	\$GNRMC,014230.00,A,4722.80340,N,00831.68218,E,0.000,,120477,,,A,V*14	
(d)ddmm.mmmmm	4722.80340 North	00831.68218 East
Degrees and minutes	47 degrees, 22.80340 minutes	8 degrees, 31.68218 minutes
Degrees	47.38005667 degrees	8.52803633 degrees
Degrees, minutes and seconds	47 degrees, 22 minutes, 48.2040 seconds	8 degrees, 31 minutes, 40.9308 seconds

### 2.5.4 NMEA GNSS, satellite and signal numbering

See [GNSS, satellite and signal identifiers](#) for details on how GNSS, satellites and signals are numbered in the NMEA protocol.

NMEA defines satellite numbering systems for some, but not all GNSS. The exact behavior depends on the configured NMEA protocol version and ("extended" or "strict") mode. See [NMEA protocol configuration](#) for details.

### 2.5.5 NMEA position fix flags

This section shows how u-blox positioning receivers implement the NMEA protocol and the conditions determining how flags are set.

The following flags are used in NMEA 4.10 and later.

NMEA Message	GLL, RMC	GGA	GLL, VTG	RMC, GNS
Field	status <sup>6</sup>	quality <sup>7</sup>	posMode <sup>8</sup>	posMode <sup>8</sup>
No position fix (at power-up, after losing satellite lock)	V	0	N	N
GNSS fix, but user limits exceeded	V	0	N	N
Dead reckoning fix, but user limits exceeded	V	6	E	E
Dead reckoning fix	A	6	E	E
RTK float	A	5	D	F
RTK fixed	A	4	D	R

<sup>6</sup> Possible *status* values: V = data invalid, A = data valid

<sup>7</sup> Possible values for *quality*: 0 = No fix, 1 = autonomous GNSS fix, 2 = differential GNSS fix, 4 = RTK fixed, 5 = RTK float, 6 = estimated/dead reckoning fix

<sup>8</sup> Possible values for *posMode*: N = No fix, E = estimated/dead reckoning fix, A = autonomous GNSS fix, D = differential GNSS fix, F = RTK float, R = RTK fixed

NMEA Message	GLL, RMC	GGA	GLL, VTG	RMC, GNS
Field	status <sup>6</sup>	quality <sup>7</sup>	posMode <sup>8</sup>	posMode <sup>8</sup>
2D GNSS fix	A	1 / 2	A / D	A / D
3D GNSS fix	A	1 / 2	A / D	A / D
Combined GNSS/dead reckoning fix	A	1 / 2	A / D	A / D

In high precision GNSS (HPG) products it is recommended to select NMEA version 4.10 or above. Earlier versions do not support the float RTK (F) and real time kinematic (R) mode indicator flags in all messages.

The following flags are used in NMEA 2.3 - 4.0.

NMEA Message	GLL, RMC	GGA	GSA	GLL, VTG, RMC, GNS
Field	status <sup>9</sup>	quality <sup>10</sup>	navMode <sup>11</sup>	posMode <sup>12</sup>
No position fix (at power-up, after losing satellite lock)	V	0	1	N
GNSS fix, but user limits exceeded	V	0	1	N
Dead reckoning fix, but user limits exceeded	V	6	2	E
Dead reckoning fix	A	6	2	E
2D GNSS fix	A	1 / 2	2	A / D
3D GNSS fix	A	1 / 2	3	A / D
Combined GNSS/dead reckoning fix	A	1 / 2	3	A / D

The flags in NMEA 2.1 and earlier are the same as NMEA 2.3 but with the following differences:

- The *posMode* field is not output for GLL, RMC and VTG messages (each message has one field less).
- The GGA *quality* field is set to 1 (instead of 6) for both types of dead reckoning fix.

## 2.5.6 NMEA output of invalid or unknown data

By default the receiver will not output invalid data. In such cases, it will output empty fields. See [NMEA protocol configuration](#) for options to adjust this behavior.

A valid position fix is reported as follows:

```
$GPGLL,4717.11634,N,00833.91297,E,124923.00,A,A*6E
```

An invalid position fix (but valid time) is reported as follows:

```
$GPGLL,,,,,124924.00,V,N*42
```

If the time is unknown (e.g. during a cold start):

```
$GPGLL,,,,,,V,N*64
```

Unlike the NMEA standard behavior to invalid data, dead reckoning products always report a position. It is marked as invalid (V) when the user limits are exceeded or valid (A) if the user limits are met.

<sup>9</sup> Possible values for *status*: V = data invalid, A = data valid

<sup>10</sup> Possible values for *quality*: 0 = no fix, 1 = autonomous GNSS fix, 2 = differential GNSS fix, 4 = RTK fixed, 5 = RTK float, 6 = estimated/dead reckoning fix

<sup>11</sup> Possible values for *navMode*: 1 = No fix, 2 = 2D fix, 3 = 3D fix

<sup>12</sup> Possible values for *posMode*: N = No fix, E = estimated/dead reckoning fix, A = autonomous GNSS fix, D = differential GNSS fix

## 2.6 NMEA messages overview

<b>Message</b>	<b>Class/ID</b>	<b>Description (Type)</b>
<b>NMEA-Standard – Standard NMEA messages</b>		
NMEA-Standard-DTM	0xf0 0x0a	• Datum reference (Output)
NMEA-Standard-GAQ	0xf0 0x45	• Poll a standard message (Talker ID GA) (Poll request)
NMEA-Standard-GBQ	0xf0 0x44	• Poll a standard message (Talker ID GB) (Poll request)
NMEA-Standard-GBS	0xf0 0x09	• GNSS satellite fault detection (Output)
NMEA-Standard-GGA	0xf0 0x00	• Global positioning system fix data (Output)
NMEA-Standard-GLL	0xf0 0x01	• Latitude and longitude, with time of position fix and status (Output)
NMEA-Standard-GLQ	0xf0 0x43	• Poll a standard message (Talker ID GL) (Poll request)
NMEA-Standard-GNQ	0xf0 0x42	• Poll a standard message (Talker ID GN) (Poll request)
NMEA-Standard-GNS	0xf0 0x0d	• GNSS fix data (Output)
NMEA-Standard-GPQ	0xf0 0x40	• Poll a standard message (Talker ID GP) (Poll request)
NMEA-Standard-GQQ	0xf0 0x47	• Poll a standard message (Talker ID GQ) (Poll request)
NMEA-Standard-GRS	0xf0 0x06	• GNSS range residuals (Output)
NMEA-Standard-GSA	0xf0 0x02	• GNSS DOP and active satellites (Output)
NMEA-Standard-GST	0xf0 0x07	• GNSS pseudorange error statistics (Output)
NMEA-Standard-GSV	0xf0 0x03	• GNSS satellites in view (Output)
NMEA-Standard-RLM	0xf0 0x0b	• Return link message (RLM) (Output)
NMEA-Standard-RMC	0xf0 0x04	• Recommended minimum data (Output)
NMEA-Standard-TXT	0xf0 0x41	• Text transmission (Output)
NMEA-Standard-VLW	0xf0 0x0f	• Dual ground/water distance (Output)
NMEA-Standard-VTG	0xf0 0x05	• Course over ground and ground speed (Output)
NMEA-Standard-ZDA	0xf0 0x08	• Time and date (Output)
<b>NMEA-NAV2 – Secondary output NMEA messages</b>		
NMEA-NAV2-GGA	0xf7 0x00	• Global positioning system fix data (Output)
NMEA-NAV2-GLL	0xf7 0x01	• Latitude and longitude, with time of position fix and status. (Output)
NMEA-NAV2-GNS	0xf7 0x0d	• GNSS fix data (Output)
NMEA-NAV2-GSA	0xf7 0x02	• GNSS DOP and active satellites (Output)
NMEA-NAV2-RMC	0xf7 0x04	• Recommended minimum data (Output)
NMEA-NAV2-VTG	0xf7 0x05	• Course over ground and ground speed (Output)
NMEA-NAV2-ZDA	0xf7 0x08	• Time and date (Output)
<b>NMEA-PUBX – u-blox proprietary NMEA messages</b>		
NMEA-PUBX-CONFIG	0xf1 0x41	• Set protocols and baud rate (Set)
NMEA-PUBX-POSITION	0xf1 0x00	• Poll a PUBX,00 message (Poll request) • Lat/Long position data (Output)
NMEA-PUBX-RATE	0xf1 0x40	• Set NMEA message output rate (Set)
NMEA-PUBX-SVSTATUS	0xf1 0x03	• Poll a PUBX,03 message (Poll request) • Satellite status (Output)
NMEA-PUBX-TIME	0xf1 0x04	• Poll a PUBX,04 message (Poll request) • Time of day and clock information (Output)

## 2.7 Standard messages

Standard NMEA messages as defined by the NMEA 0183 standard. See [NMEA protocol](#) for details.

### 2.7.1 DTM

#### 2.7.1.1 Datum reference

Message	NMEA-Standard-DTM Datum reference				
Type	Output				
Comment	This message gives the difference between the current datum and the reference datum. The current datum is set to WGS84 by default. The reference datum cannot be changed and is always set to WGS84.				
Information	Class/ID: 0xF0 0x0a		Number of fields: 11		
Structure	\$xxDTM, datum, subDatum, lat, NS, lon, EW, alt, refDatum*cs\r\n				
Examples	\$GPDTM, W84, , 0.0, N, 0.0, E, 0.0, W84*6F\r\n \$GPDTM, 999, , 0.08, N, 0.07, E, -47.7, W84*1C\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxDTM	string	-	\$GPDTM	DTM Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	datum	string	-	W84	Local datum code: W84 = WGS84, P90 = PZ90, 999 = user-defined
2	subDatum	string	-	-	A null field (or a string describing the currently selected datum for protocol versions less than 14.00)
3	lat	numeric	min	0.08	Offset in Latitude
4	NS	character	-	S	North/South indicator
5	lon	numeric	min	0.07	Offset in Longitude
6	EW	character	-	E	East/West indicator
7	alt	numeric	m	-2.8	Offset in altitude
8	refDatum	string	-	W84	Reference datum code: W84 (WGS 84, fixed field)
9	cs	hexadecimal	-	*67	Checksum
10	CRLF	character	-	-	Carriage return and line feed

### 2.7.2 GAQ

#### 2.7.2.1 Poll a standard message (Talker ID GA)

Message	NMEA-Standard-GAQ Poll a standard message (Talker ID GA)				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GA.				
Information	Class/ID: 0xF0 0x45		Number of fields: 4		
Structure	\$xxGAQ, msgId*cs\r\n				
Example	\$EIGAQ, RMC*2B\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description

0	xxGAQ	string	-	\$EIGAQ	GAQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*2B	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.3 GBQ

### 2.7.3.1 Poll a standard message (Talker ID GB)

<b>Message</b>	<b>NMEA-Standard-GBQ</b> <b>Poll a standard message (Talker ID GB)</b>				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GB				
Information	Class/ID: 0xf0 0x44		Number of fields: 4		
Structure	\$xxGBQ,msgId*cs\r\n				
Example	\$EIGBQ,RMC*28\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGBQ	string	-	\$EIGBQ	GBQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*28	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.4 GBS

### 2.7.4.1 GNSS satellite fault detection

<b>Message</b>	<b>NMEA-Standard-GBS</b> <b>GNSS satellite fault detection</b>				
Type	Output				
Comment	This message outputs the results of the Receiver Autonomous Integrity Monitoring Algorithm (RAIM). <ul style="list-style-type: none"> <li>The fields <b>errLat</b>, <b>errLon</b> and <b>errAlt</b> output the standard deviation of the position calculation, using all satellites that pass the RAIM test successfully.</li> <li>The fields <b>errLat</b>, <b>errLon</b> and <b>errAlt</b> are only output if the RAIM process passed successfully (i.e. no or successful edits happened). These fields are never output if 4 or fewer satellites are used for the navigation calculation (because, in such cases, integrity cannot be determined by the receiver autonomously).</li> <li>The fields <b>prob</b>, <b>bias</b> and <b>stdev</b> are only output if at least one satellite failed in the RAIM test.</li> </ul> If more than one satellites fail the RAIM test, only the information for the worst satellite is output in this message.				
Information	Class/ID: 0xf0 0x09		Number of fields: 13		
Structure	\$xxGBS,time,errLat,errLon,errAlt,svid,prob,bias, stddev,systemId,signalId*cs\r\n				
Examples	\$GPGBS,235503.00,1.6,1.4,3.2,,,,,*40\r\n \$GPGBS,235458.00,1.4,1.3,3.1,03,,,-21.4,3.8,1,0*5B\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGBS	string	-	\$GPGBS	GBS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )

1	time	hhmmss.ss	-	235503.00	UTC time to which this RAIM sentence belongs. See the section UTC representation in the <a href="#">Integration manual</a> for details.
2	errLat	numeric	m	1.6	Expected error in latitude
3	errLon	numeric	m	1.4	Expected error in longitude
4	errAlt	numeric	m	3.2	Expected error in altitude
5	svid	numeric	-	03	Satellite ID of most likely failed satellite
6	prob	numeric	-	-	Probability of missed detection: null (not supported, fixed field)
7	bias	numeric	m	-21.4	Estimated bias of most likely failed satellite (a priori residual)
8	stddev	numeric	m	3.8	Standard deviation of estimated bias
9	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
10	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
11	cs	hexadecimal	-	*5B	Checksum
12	CRLF	character	-	-	Carriage return and line feed

## 2.7.5 GGA

### 2.7.5.1 Global positioning system fix data

<b>Message</b>	<b>NMEA-Standard-GGA</b> <b>Global positioning system fix data</b>				
<b>Type</b>	Output				
<b>Comment</b>	Time and position, together with GPS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.).  ⓘ The output of this message is dependent on the currently selected datum (default: WGS84). The NMEA specification indicates that the GGA message is GPS-specific. However, when the receiver is configured for multi-GNSS, the GGA message contents will be generated from the multi-GNSS solution. For multi-GNSS use, it is recommended that the <a href="#">NMEA-GNS</a> message is used instead.				
<b>Information</b>	Class/ID: 0xF0 0x00		Number of fields: 17		
<b>Structure</b>	\$xxGGA,time,lat,NS,lon,EW,quality,numSV,HDOP,alt,altUnit,sep,sepUnit,diffAge,diffStation*cs\r\n				
<b>Example</b>	\$GPGGA,092725.00,4717.11399,N,00833.91590,E,1,08,1.01,499.6,M,48.0,M,,*5B\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxGGA	string	-	\$GPGGA	GGA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	092725.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
2	lat	ddmm.mmmmm	-	4717.11399	Latitude (degrees and minutes), see <a href="#">format description</a>
3	NS	character	-	N	North/South indicator
4	lon	dddmm.mmmmm	-	00833.91590	Longitude (degrees and minutes), see <a href="#">format description</a>
5	EW	character	-	E	East/West indicator
6	quality	digit	-	1	Quality indicator for position fix, see <a href="#">position fix flags description</a>

7	numSV	numeric	-	08	Number of satellites used (range: 0-12)
8	HDOP	numeric	-	1.01	Horizontal Dilution of Precision
9	alt	numeric	m	499.6	Altitude above mean sea level
10	altUnit	character	-	M	Altitude units: M (meters, fixed field)
11	sep	numeric	m	48.0	Geoid separation: difference between ellipsoid and mean sea level
12	sepUnit	character	-	M	Geoid separation units: M (meters, fixed field)
13	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
14	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
15	cs	hexadecimal	-	*5B	Checksum
16	CRLF	character	-	-	Carriage return and line feed

## 2.7.6 GLL

### 2.7.6.1 Latitude and longitude, with time of position fix and status

<b>Message</b>	<b>NMEA-Standard-GLL</b> <b>Latitude and longitude, with time of position fix and status</b>				
<b>Type</b>	Output				
<b>Comment</b>	 The output of this message is dependent on the currently selected datum (default: WGS84)				
<b>Information</b>	Class/ID: 0xF0 0x01		Number of fields: 10		
<b>Structure</b>	\$xxGLL, lat, NS, lon, EW, time, status, posMode*cs\r\n				
<b>Example</b>	\$GPGLL, 4717.11364, N, 00833.91565, E, 092321.00, A, A*60\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxGLL	string	-	\$GPGLL	GLL Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	lat	ddmm. mmmm	-	4717.11364	Latitude (degrees and minutes), see <a href="#">format description</a>
2	NS	character	-	N	North/South indicator
3	lon	dddmm. mmmm	-	00833.91565	Longitude (degrees and minutes), see <a href="#">format description</a>
4	EW	character	-	E	East/West indicator
5	time	hhmmss.ss	-	092321.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
6	status	character	-	A	Data validity status, see <a href="#">position fix flags description</a>
7	posMode	character	-	A	Positioning mode, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
8	cs	hexadecimal	-	*60	Checksum
9	CRLF	character	-	-	Carriage return and line feed

## 2.7.7 GLQ

### 2.7.7.1 Poll a standard message (Talker ID GL)

<b>Message</b>	<b>NMEA-Standard-GLQ</b> <b>Poll a standard message (Talker ID GL)</b>				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GL				
Information	Class/ID: 0xf0 0x43		Number of fields: 4		
Structure	\$xxGLQ,msgId*cs\r\n				
Example	\$EIGLQ,RMC*3A\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGLQ	string	-	\$EIGLQ	GLQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*3A	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.8 GNQ

### 2.7.8.1 Poll a standard message (Talker ID GN)

<b>Message</b>	<b>NMEA-Standard-GNQ</b> <b>Poll a standard message (Talker ID GN)</b>				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GN				
Information	Class/ID: 0xf0 0x42		Number of fields: 4		
Structure	\$xxGNQ,msgId*cs\r\n				
Example	\$EIGNQ,RMC*3A\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGNQ	string	-	\$EIGNQ	GNQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*3A	Checksum
3	CRLF	character	-	-	Carriage return and line feed

## 2.7.9 GNS

### 2.7.9.1 GNSS fix data

<b>Message</b>	<b>NMEA-Standard-GNS</b> <b>GNSS fix data</b>				
Type	Output				
Comment	Time and position, together with GNSS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.). <a href="#">🔗</a> The output of this message is dependent on the currently selected datum (default: WGS84)				
Information	Class/ID: 0xf0 0x0d		Number of fields: 16		
Structure	\$xxGNS,time,lat,NS,lon,EW,posMode,numSV,HDOP,alt,sep,diffAge,diffStation,navStatus*cs\r\n				

**Examples** \$GNGNS,103600.01,5114.51176,N,00012.29380,W,ANNN,07,1.18,111.5,45.6,,,V\*00\r\n  
 \$GNGNS,122310.2,3722.425671,N,12258.856215,W,DAAA,14,0.9,1005.543,6.5,,,V\*0E\r\n  
 \$GPGNS,122310.2,,,,,07,,,,5.2,23,V\*02\r\n

**Payload:**

Field	Name	Format	Unit	Example	Description
0	xxGNS	string	-	\$GPGNS	GNS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	091547.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
2	lat	ddmm. mmmm	-	5114.50897	Latitude (degrees and minutes), see <a href="#">format description</a>
3	NS	character	-	N	North/South indicator
4	lon	dddmm. mmmm	-	00012.28663	Longitude (degrees and minutes), see <a href="#">format description</a>
5	EW	character	-	E	East/West indicator
6	posMode	character	-	AAAA	Positioning mode, see <a href="#">position fix flags description</a> . First character for GPS, second character for GLONASS, third character for Galileo, fourth character for BeiDou
7	numSV	numeric	-	10	Number of satellites used (range: 0-99)
8	HDOP	numeric	-	0.83	Horizontal Dilution of Precision
9	alt	numeric	m	111.1	Altitude above mean sea level
10	sep	numeric	m	45.6	Geoid separation: difference between ellipsoid and mean sea level
11	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
12	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
13	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
14	cs	hexadecimal	-	*71	Checksum
15	CRLF	character	-	-	Carriage return and line feed

## 2.7.10 GPQ

### 2.7.10.1 Poll a standard message (Talker ID GP)

Message	NMEA-Standard-GPQ Poll a standard message (Talker ID GP)				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GP				
Information	Class/ID: 0xf0 0x40	Number of fields: 4			
Structure	\$xxGPQ,msgId*cs\r\n				
Example	\$EIGPQ,RMC*3A\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	xxGPQ	string	-	\$EIGPQ	GPQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled

2	cs	hexadecimal -	*3A	Checksum
3	CRLF	character -	-	Carriage return and line feed

## 2.7.11 GQQ

### 2.7.11.1 Poll a standard message (Talker ID GQ)

<b>Message</b>		<b>NMEA-Standard-GQQ</b>			
		<b>Poll a standard message (Talker ID GQ)</b>			
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GQ				
Information	Class/ID: 0xf0 0x47		Number of fields: 4		
Structure	\$xxGQQ,msgId*cs\r\n				
Example	\$EIGQQ,RMC*3A\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGQQ	string	-	\$EIGQQ	GQQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal -		*3A	Checksum
3	CRLF	character -		-	Carriage return and line feed

## 2.7.12 GRS

### 2.7.12.1 GNSS range residuals

<b>Message</b>		<b>NMEA-Standard-GRS</b>			
		<b>GNSS range residuals</b>			
Type	Output				
Comment	If less than 12 SVs are available, the remaining fields are output empty. If more than 12 SVs are used, only the residuals of the first 12 SVs are output, in order to remain consistent with the NMEA standard. <b>In a multi-GNSS system this message will be output multiple times, once for each GNSS.</b> ⓘ This message relates to associated <a href="#">GGA</a> and <a href="#">GSA</a> messages.				
Information	Class/ID: 0xf0 0x06		Number of fields: 19		
Structure	\$xxGRS,time,mode{,residual},systemId,signalId*cs\r\n				
Examples	\$GNGRS,104148.00,1,2.6,2.2,-1.6,-1.1,-1.7,-1.5,5.8,1.7,,,,,1,1*52\r\n \$GNGRS,104148.00,1,,0.0,2.5,0.0,,2.8,,,,,,1,5*52\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxGRS	string	-	\$GPGRS	GRS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	082632.00	UTC time of associated position fix. See the section UTC representation in the <a href="#">Integration manual</a> for details.
2	mode	digit	-	1	Computation method used: <ul style="list-style-type: none"> <li>1 = Residuals were recomputed after the <a href="#">GGA</a> position was computed (fixed)</li> </ul>
<i>Start of repeated group (12 times)</i>					
3 + n	residual	numeric	m	0.54	Range residuals for SVs used in navigation. The SV order matches the order from the <a href="#">GSA</a> sentence

End of repeated group (12 times)

15	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
16	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
17	cs	hexadecimal	-	*70	Checksum
18	CRLF	character	-	-	Carriage return and line feed

## 2.7.13 GSA

### 2.7.13.1 GNSS DOP and active satellites

<b>Message</b>	<b>NMEA-Standard-GSA GNSS DOP and active satellites</b>				
<b>Type</b>	Output				
<b>Comment</b>	The GNSS receiver operating mode, satellites used for navigation, and DOP values. <ul style="list-style-type: none"> <li>If less than 12 SVs are used for navigation, the remaining fields are left empty. If more than 12 SVs are used for navigation, only the IDs of the first 12 are output.</li> <li>The SV numbers (fields 'svid') are in the range of 1 to 32 for GPS satellites, and 33 to 64 for SBAS satellites (33 = SBAS PRN 120, 34 = SBAS PRN 121, and so on)</li> </ul> <b>In a multi-GNSS system this message will be output multiple times, once for each GNSS.</b>				
<b>Information</b>	Class/ID: 0xf0 0x02		Number of fields: 21		
<b>Structure</b>	\$xxGSA, opMode, navMode{, svid}, PDOP, HDOP, VDOP, systemId*cs\r\n				
<b>Example</b>	\$GPGSA, A, 3, 23, 29, 07, 08, 09, 18, 26, 28, , , , , 1.94, 1.18, 1.54, 1*0D\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxGSA	string	-	\$GPGSA	GSA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	opMode	character	-	A	Operation mode: <ul style="list-style-type: none"> <li>M = Manually set to operate in 2D or 3D mode</li> <li>A = Automatically switching between 2D or 3D mode</li> </ul>
2	navMode	digit	-	3	Navigation mode, see <a href="#">position fix flags description</a>
<b>Start of repeated group (12 times)</b>					
3 + n	svid	numeric	-	29	Satellite number
<b>End of repeated group (12 times)</b>					
15	PDOP	numeric	-	1.94	Position dilution of precision
16	HDOP	numeric	-	1.18	Horizontal dilution of precision
17	VDOP	numeric	-	1.54	Vertical dilution of precision
18	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
19	cs	hexadecimal	-	*0D	Checksum
20	CRLF	character	-	-	Carriage return and line feed

## 2.7.14 GST

### 2.7.14.1 GNSS pseudorange error statistics

<b>Message</b>		<b>NMEA-Standard-GST</b>			
		<b>GNSS pseudorange error statistics</b>			
<b>Type</b>	Output				
<b>Comment</b>	This message reports statistical information on the quality of the position solution.				
<b>Information</b>	Class/ID: 0xF0 0x07		Number of fields: 11		
<b>Structure</b>	\$xxGST,time,rangeRms,stdMajor,stdMinor,orient,stdLat,stdLong,stdAlt*cs\r\n				
<b>Example</b>	\$GPGST,082356.00,1.8,,,,,1.7,1.3,2.2*7E\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	xxGST	string	-	\$GPGST	GST Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	082356.00	UTC time of associated position fix. See the section UTC representation in the <a href="#">Integration manual</a> for details.
2	rangeRms	numeric	m	1.8	RMS value of the standard deviation of the ranges
3	stdMajor	numeric	m	-	Standard deviation of semi-major axis
4	stdMinor	numeric	m	-	Standard deviation of semi-minor axis
5	orient	numeric	deg	-	Orientation of semi-major axis
6	stdLat	numeric	m	1.7	Standard deviation of latitude error
7	stdLong	numeric	m	1.3	Standard deviation of longitude error
8	stdAlt	numeric	m	2.2	Standard deviation of altitude error
9	cs	hexadecimal	-	*7E	Checksum
10	CRLF	character	-	-	Carriage return and line feed

## 2.7.15 GSV

### 2.7.15.1 GNSS satellites in view

<b>Message</b>		<b>NMEA-Standard-GSV</b>			
		<b>GNSS satellites in view</b>			
<b>Type</b>	Output				
<b>Comment</b>	The number of satellites in view, together with each SV ID, elevation azimuth, and signal strength (C/No) value. Only four satellite details are transmitted in one message. <b>In a multi-GNSS system sets of GSV messages will be output multiple times, one set for each GNSS.</b>				
<b>Information</b>	Class/ID: 0xF0 0x03		Number of fields: 7 + [1..4]*4		
<b>Structure</b>	\$xxGSV,numMsg,msgNum,numSV{,svid,elv,az,cno},signalId*cs\r\n				
<b>Examples</b>	\$GPGSV,3,1,09,09,,,17,10,,,40,12,,,49,13,,,35,1*6F\r\n \$GPGSV,3,2,09,15,,,44,17,,,45,19,,,44,24,,,50,1*64\r\n \$GPGSV,3,3,09,25,,,40,1*6E\r\n \$GPGSV,1,1,03,12,,,42,24,,,47,32,,,37,5*66\r\n \$GAGSV,1,1,00,2*76\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	xxGSV	string	-	\$GPGSV	GSV Message ID (xx = GSV Talker ID, see <a href="#">NMEA Talker IDs table</a> ). Talker ID GN shall not be used.
1	numMsg	digit	-	3	Number of messages, total number of GSV messages being output (range: 1-9)
2	msgNum	digit	-	1	Number of this message (range: 1-numMsg)

3	numSV	numeric	-	10	Number of known satellites in view regarding both the talker ID and the signalId
<i>Start of repeated group (1...4 times)</i>					
4 + n·4	svid	numeric	-	23	Satellite ID
5 + n·4	elv	numeric	deg	38	Elevation (<= 90)
6 + n·4	az	numeric	deg	230	Azimuth (range: 0-359)
7 + n·4	cno	numeric	dBHz	44	Signal strength (C/NO, range: 0-99), null when not tracking
<i>End of repeated group (1...4 times)</i>					
4 + N·4	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
5 + N·4	cs	hexadecimal	-	*7F	Checksum
6 + N·4	CRLF	character	-	-	Carriage return and line feed

## 2.7.16 RLM

### 2.7.16.1 Return link message (RLM)

<b>Message</b>	<b>NMEA-Standard-RLM Return link message (RLM)</b>				
<b>Type</b>	Output				
<b>Comment</b>	<p>The RLM sentence is used to transfer a Return link message from a Cospas-Sarsat recognized Return link service provider (RLSP).</p> <p>The RLM sentence supports communications to an emitting beacon once a distress alert has been detected, located and confirmed. The communications may include acknowledgement of the alert to the emitting beacon as well as optional text messages, and may also include remote beacon configuration and testing.</p>				
<b>Information</b>	Class/ID: 0xf0 0x0b		Number of fields: 7		
<b>Structure</b>	\$xxRLM, beacon, time, code, body*cs\r\n				
<b>Examples</b>	<pre>\$GARLM, 00000078A9FBAD5, 083559.00, 3, C45B*57\r\n \$GARLM, F7129D41BC6A78C, 034433.02, 3, B63CA732AFD419D2*57\r\n</pre>				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxRLM	string	-	\$GARLM	RLM message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	beacon	hexadecimal	-	00000078A9FBAD5	Beacon ID, identifies beacon intended to receive this message (fixed length 15 hexadecimal character field)
2	time	hhmmss.ss	-	083559.00	Time of reception field to indicate RLM timestamp in UTC. See the section UTC representation in the <a href="#">Integration manual</a> for details.
3	code	character	-	3	Message code field to identify type of RLM Message Service: <ul style="list-style-type: none"> <li>• 0 = Reserved for future RLM services</li> <li>• 1 = Acknowledgement service RLM</li> <li>• 2 = Command service RLM</li> <li>• 3 = Message service RLM</li> <li>• 4-E = Reserved for future RLM services</li> <li>• F = Test service RLM (currently used only by the Galileo program)</li> </ul>
4	body	hexadecimal	-	C45B	Message body encapsulates the data parameters provided by the RLSP into hexadecimal format.
5	cs	hexadecimal	-	*57	Checksum

6	CRLF	character	-	-	Carriage return and line feed
---	------	-----------	---	---	-------------------------------

## 2.7.17 RMC

### 2.7.17.1 Recommended minimum data

Message	NMEA-Standard-RMC Recommended minimum data				
Type	Output				
Comment	The recommended minimum sentence defined by NMEA for GNSS system data. <a href="#">🔗</a> The output of this message is dependent on the currently selected datum (default: WGS84)				
Information	Class/ID: 0xf0 0x04		Number of fields: 16		
Structure	\$xxRMC,time,status,lat,NS,lon,EW,spd,cog,date,mv,mvEW,posMode,navStatus*cs\r\n				
Example	\$GPRMC,083559.00,A,4717.11437,N,00833.91522,E,0.004,77.52,091202,,A,V*57\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	xxRMC	string	-	\$GPRMC	RMC Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	083559.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
2	status	character	-	A	Data validity status, see <a href="#">position fix flags description</a>
3	lat	ddmm. mmmm	-	4717.11437	Latitude (degrees and minutes), see <a href="#">format description</a>
4	NS	character	-	N	North/South indicator
5	lon	dddmm. mmmm	-	00833.91522	Longitude (degrees and minutes), see <a href="#">format description</a>
6	EW	character	-	E	East/West indicator
7	spd	numeric	knots	0.004	Speed over ground
8	cog	numeric	deg	77.52	Course over ground
9	date	ddmmyy	-	091202	Date in day, month, year format. See the section UTC representation in the <a href="#">Integration manual</a> for details.
10	mv	numeric	deg	-	Magnetic variation value
11	mvEW	character	-	-	Magnetic variation E/W indicator
12	posMode	character	-	A	Mode Indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
13	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
14	cs	hexadecimal	-	*57	Checksum
15	CRLF	character	-	-	Carriage return and line feed

## 2.7.18 TXT

### 2.7.18.1 Text transmission

Message	NMEA-Standard-TXT Text transmission				
Type	Output				

<b>Comment</b>	This message outputs various information on the receiver, such as power-up screen, software version etc. This message can be configured using the <a href="#">CFG-INFMSG</a> configuration group.				
<b>Information</b>	Class/ID: 0xf0 0x41		Number of fields: 7		
<b>Structure</b>	\$xxTXT, numMsg, msgNum, msgType, text*cs\r\n				
<b>Examples</b>	\$GPTXT, 01, 01, 02, u-blox ag - www.u-blox.com*50\r\n \$GPTXT, 01, 01, 02, ANTARIS ATR0620 HW 00000040*67\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	xxTXT	string	-	\$GPTXT	TXT Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	numMsg	numeric	-	01	Total number of messages in this transmission (range: 1-99)
2	msgNum	numeric	-	01	Message number in this transmission (range: 1-numMsg)
3	msgType	numeric	-	02	Text identifier (u-blox receivers specify the type of the message with this number): <ul style="list-style-type: none"> <li>• 00 = Error</li> <li>• 01 = Warning</li> <li>• 02 = Notice</li> <li>• 07 = User</li> </ul>
4	text	string	-	www.u-blox.com	Any ASCII text
5	cs	hexadecimal	-	*67	Checksum
6	CRLF	character	-	-	Carriage return and line feed

## 2.7.19 VLW

### 2.7.19.1 Dual ground/water distance

<b>Message</b>	<b>NMEA-Standard-VLW</b> <b>Dual ground/water distance</b>				
<b>Type</b>	Output				
<b>Comment</b>	The distance traveled, relative to the water and over the ground. This message relates to the odometer feature detailed in the <a href="#">Integration manual</a> .				
<b>Information</b>	Class/ID: 0xf0 0x0f		Number of fields: 11		
<b>Structure</b>	\$xxVLW, twd, twdUnit, wd, wdUnit, tgd, tgdUnit, gd, gdUnit*cs\r\n				
<b>Example</b>	\$GPVLW, , N, , N, 15.8, N, 1.2, N*06\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	xxVLW	string	-	\$GPVLW	VLW Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	twd	numeric	nmi	-	Total cumulative water distance: null (fixed field)
2	twdUnit	character	-	N	Total cumulative water distance units: N (nautical miles, fixed field)
3	wd	numeric	nmi	-	Water distance since reset: null (fixed field)
4	wdUnit	character	-	N	Water distance since reset units: N (nautical miles, fixed field)
5	tgd	numeric	nmi	15.8	Total cumulative ground distance (only available in NMEA 4.00 and later)

6	tgdUnit	character	-	N	Total cumulative ground distance units: N (nautical miles, fixed field, only available in NMEA 4.00 and later)
7	gd	numeric	nmi	1.2	Ground distance since reset (only available in NMEA 4.00 and later)
8	gdUnit	character	-	N	Ground distance since reset units: N (nautical miles, fixed field, only available in NMEA 4.00 and later)
9	cs	hexadecimal	-	*06	Checksum
10	CRLF	character	-	-	Carriage return and line feed

## 2.7.20 VTG

### 2.7.20.1 Course over ground and ground speed

<b>Message</b>	<b>NMEA-Standard-VTG</b>				
	<b>Course over ground and ground speed</b>				
<b>Type</b>	Output				
<b>Comment</b>	Velocity is given as course over ground (COG) and speed over ground (SOG).				
<b>Information</b>	Class/ID: 0xf0 0x05		Number of fields: 12		
<b>Structure</b>	\$xxVTG, cogt, cogtUnit, cogm, cogmUnit, sogn, sognUnit, sogk, sogkUnit, posMode*cs\r\n				
<b>Example</b>	\$GPVTG, 77.52, T, , M, 0.004, N, 0.008, K, A*06\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	xxVTG	string	-	\$GPVTG	VTG Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	cogt	numeric	degrees	77.52	Course over ground (true)
2	cogtUnit	character	-	T	Course over ground units: T (degrees true, fixed field)
3	cogm	numeric	degrees	-	Course over ground (magnetic)
4	cogmUnit	character	-	M	Course over ground units: M (degrees magnetic, fixed field)
5	sogn	numeric	knots	0.004	Speed over ground
6	sognUnit	character	-	N	Speed over ground units: N (knots, fixed field)
7	sogk	numeric	km/h	0.008	Speed over ground
8	sogkUnit	character	-	K	Speed over ground units: K (kilometers per hour, fixed field)
9	posMode	character	-	A	Mode indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
10	cs	hexadecimal	-	*06	Checksum
11	CRLF	character	-	-	Carriage return and line feed

## 2.7.21 ZDA

### 2.7.21.1 Time and date

<b>Message</b>	<b>NMEA-Standard-ZDA</b>				
	<b>Time and date</b>				
<b>Type</b>	Output				
<b>Comment</b>	UTC, day, month, year and local time zone.				
<b>Information</b>	Class/ID: 0xf0 0x08		Number of fields: 9		

**Structure**    \$xxZDA,time,day,month,year,ltzh,ltzn\*cs\r\n

**Example**    \$GPZDA,082710.00,16,09,2002,00,00\*64\r\n

**Payload:**

Field	Name	Format	Unit	Example	Description
0	xxZDA	string	-	\$GPZDA	ZDA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
1	time	hhmmss.ss	-	082710.00	UTC Time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
2	day	dd	day	16	UTC day (range: 1-31)
3	month	mm	month	09	UTC month (range: 1-12)
4	year	yyyy	year	2002	UTC year
5	ltzh	xx	-	00	Local time zone hours (fixed field, always 00)
6	ltzn	zz	-	00	Local time zone minutes (fixed field, always 00)
7	cs	hexadecimal	-	*64	Checksum
8	CRLF	character	-	-	Carriage return and line feed

## 2.8 Secondary output messages

Secondary output NMEA messages. These are NMEA messages prepended with an NMEA TAG block as defined by the NMEA 0183 standard. See [NMEA protocol](#) for details.

### 2.8.1 GGA

#### 2.8.1.1 Global positioning system fix data

Message	NMEA-NAV2-GGA Global positioning system fix data				
Type	Output				
Comment	Time and position, together with GPS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.).  To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.  ⓘ The output of this message is dependent on the currently selected datum (default: WGS84). The NMEA specification indicates that the GGA message is GPS-specific. However, when the receiver is configured for multi-GNSS, the GGA message contents will be generated from the multi-GNSS solution. For multi-GNSS use, it is recommended that the <a href="#">NMEA-GNS</a> message is used instead.				
Information	Class/ID: 0xf7 0x00	Number of fields: 21			
Structure	\s:1*78\ \$xxGGA,time,lat,NS,lon,EW,quality,numSV,HDOP,alt,altUnit,sep,sepUnit,diffAge ↵,diffStation*cs\r\n				
Example	\s:1*78\ \$GPGGA,092725.00,4717.11399,N,00833.91590,E,1,08,1.01,499.6,M,48.0,M,,*5B\r\n ↵				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxGGA	string	-	\$GPGGA	GGA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )

5	time	hhmmss.ss	-	092725.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
6	lat	ddmm. mmmm	-	4717.11399	Latitude (degrees and minutes), see <a href="#">format description</a>
7	NS	character	-	N	North/South indicator
8	lon	dddmm. mmmm	-	00833.91590	Longitude (degrees and minutes), see <a href="#">format description</a>
9	EW	character	-	E	East/West indicator
10	quality	digit	-	1	Quality indicator for position fix, see <a href="#">position fix flags description</a>
11	numSV	numeric	-	08	Number of satellites used (range: 0-12)
12	HDOP	numeric	-	1.01	Horizontal Dilution of Precision
13	alt	numeric	m	499.6	Altitude above mean sea level
14	altUnit	character	-	M	Altitude units: M (meters, fixed field)
15	sep	numeric	m	48.0	Geoid separation: difference between ellipsoid and mean sea level
16	sepUnit	character	-	M	Geoid separation units: M (meters, fixed field)
17	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
18	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
19	cs	hexadecimal	-	*5B	Checksum
20	CRLF	character	-	-	Carriage return and line feed

## 2.8.2 GLL

### 2.8.2.1 Latitude and longitude, with time of position fix and status.

<b>Message</b>	<b>NMEA-NAV2-GLL</b> <b>Latitude and longitude, with time of position fix and status.</b>				
<b>Type</b>	Output				
<b>Comment</b>	Geographic Position - Latitude/Longitude. To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.  The output of this message is dependent on the currently selected datum (default: WGS84)				
<b>Information</b>	Class/ID: 0xf7 0x01		Number of fields: 14		
<b>Structure</b>	\s:1*78\\${xx}GLL, lat, NS, lon, EW, time, status, posMode*cs\r\n				
<b>Example</b>	\s:1*78\\${GPGLL}, 4717.11364, N, 00833.91565, E, 092321.00, A, A*60\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxGLL	string	-	\\$GPGLL	GLL Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )

5	lat	ddmm. mmmm	-	4717.11364	Latitude (degrees and minutes), see <a href="#">format description</a>
6	NS	character	-	N	North/South indicator
7	lon	dddmm. mmmm	-	00833.91565	Longitude (degrees and minutes), see <a href="#">format description</a>
8	EW	character	-	E	East/West indicator
9	time	hhmmss.ss	-	092321.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
10	status	character	-	A	Data validity status, see <a href="#">position fix flags description</a>
11	posMode	character	-	A	Positioning mode, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
12	cs	hexadecimal	-	*60	Checksum
13	CRLF	character	-	-	Carriage return and line feed

## 2.8.3 GNS

### 2.8.3.1 GNSS fix data

Message	NMEA-NAV2-GNS GNSS fix data				
Type	Output				
Comment	Time and position, together with GNSS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.). To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard. 🔄 The output of this message is dependent on the currently selected datum (default: WGS84)				
Information	Class/ID: 0xf7 0x0d	Number of fields: 20			
Structure	<code>\s:1*78\\${xx}GNS,time,lat,NS,lon,EW,posMode,numSV,HDOP,alt,sep,diffAge,diffStation,nav ↵                      Status*cs\r\n</code>				
Examples	<code>\s:1*78\\${G}GNS,103600.01,5114.51176,N,00012.29380,W,ANNN,07,1.18,111.5,45.6,,,V*00\r ↵                      \n                      \s:1*78\\${G}GNS,122310.2,3722.425671,N,12258.856215,W,DAAA,14,0.9,1005.543,6.5,,,V*0E ↵                      \r\n                      \s:1*78\\${G}PGNS,122310.2,,,,,,07,,,,,5.2,23,V*02\r\n</code>				
Payload:					
Field	Name	Format	Unit	Example	Description
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxGNS	string	-	\\$GPGNS	GNS Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	time	hhmmss.ss	-	091547.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
6	lat	ddmm. mmmm	-	5114.50897	Latitude (degrees and minutes), see <a href="#">format description</a>
7	NS	character	-	N	North/South indicator
8	lon	dddmm. mmmm	-	00012.28663	Longitude (degrees and minutes), see <a href="#">format description</a>
9	EW	character	-	E	East/West indicator

10	posMode	character	-	AAAA	Positioning mode, see <a href="#">position fix flags description</a> . First character for GPS, second character for GLONASS, third character for Galileo, fourth character for BeiDou
11	numSV	numeric	-	10	Number of satellites used (range: 0-99)
12	HDOP	numeric	-	0.83	Horizontal Dilution of Precision
13	alt	numeric	m	111.1	Altitude above mean sea level
14	sep	numeric	m	45.6	Geoid separation: difference between ellipsoid and mean sea level
15	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
16	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
17	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
18	cs	hexadecimal	-	*71	Checksum
19	CRLF	character	-	-	Carriage return and line feed

## 2.8.4 GSA

### 2.8.4.1 GNSS DOP and active satellites

<b>Message</b>	<b>NMEA-NAV2-GSA</b> <b>GNSS DOP and active satellites</b>				
<b>Type</b>	Output				
<b>Comment</b>	The GNSS receiver operating mode, satellites used for navigation, and DOP values. <ul style="list-style-type: none"> <li>If less than 12 SVs are used for navigation, the remaining fields are left empty. If more than 12 SVs are used for navigation, only the IDs of the first 12 are output.</li> <li>The SV numbers (fields 'svid') are in the range of 1 to 32 for GPS satellites, and 33 to 64 for SBAS satellites (33 = SBAS PRN 120, 34 = SBAS PRN 121, and so on)</li> </ul> <p><b>In a multi-GNSS system this message will be output multiple times, once for each GNSS.</b></p> To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.				
<b>Information</b>	Class/ID: 0xf7 0x02		Number of fields: 25		
<b>Structure</b>	\s:1*78\ \$xxGSA, opMode, navMode{, svid}, PDOP, HDOP, VDOP, systemId*cs\r\n				
<b>Example</b>	\s:1*78\ \$GPGSA, A, 3, 23, 29, 07, 08, 09, 18, 26, 28, , , , , 1.94, 1.18, 1.54, 1*0D\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxGSA	string	-	\$GPGSA	GSA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	opMode	character	-	A	Operation mode: <ul style="list-style-type: none"> <li>M = Manually set to operate in 2D or 3D mode</li> <li>A = Automatically switching between 2D or 3D mode</li> </ul>
6	navMode	digit	-	3	Navigation mode, see <a href="#">position fix flags description</a>

Start of repeated group (12 times)

7 + n	svid	numeric	-	29	Satellite number
-------	------	---------	---	----	------------------

End of repeated group (12 times)

19	PDOP	numeric	-	1.94	Position dilution of precision
20	HDOP	numeric	-	1.18	Horizontal dilution of precision
21	VDOP	numeric	-	1.54	Vertical dilution of precision
22	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see <a href="#">Signal Identifiers table</a> (only available in NMEA 4.10 and later)
23	cs	hexadecimal	-	*0D	Checksum
24	CRLF	character	-	-	Carriage return and line feed

## 2.8.5 RMC

### 2.8.5.1 Recommended minimum data

<b>Message</b>	<b>NMEA-NAV2-RMC</b>				
	<b>Recommended minimum data</b>				
<b>Type</b>	Output				
<b>Comment</b>	The recommended minimum sentence defined by NMEA for GNSS system data. To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard. 🔄 The output of this message is dependent on the currently selected datum (default: WGS84)				
<b>Information</b>	Class/ID: 0xf7 0x04		Number of fields: 20		
<b>Structure</b>	\s:1*78\\$\\$xxRMC,time,status,lat,NS,lon,EW,spd,cog,date,mv,mvEW,posMode,navStatus*cs\r\n				
<b>Example</b>	\s:1*78\\$\\$GPRMC,083559.00,A,4717.11437,N,00833.91522,E,0.004,77.52,091202,,A,V*57\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxRMC	string	-	\$GPRMC	RMC Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	time	hhmmss.ss	-	083559.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
6	status	character	-	A	Data validity status, see <a href="#">position fix flags description</a>
7	lat	ddmm. mmmm	-	4717.11437	Latitude (degrees and minutes), see <a href="#">format description</a>
8	NS	character	-	N	North/South indicator
9	lon	dddmm. mmmm	-	00833.91522	Longitude (degrees and minutes), see <a href="#">format description</a>
10	EW	character	-	E	East/West indicator
11	spd	numeric	knots	0.004	Speed over ground
12	cog	numeric	deg	77.52	Course over ground

13	date	ddmmyy	-	091202	Date in day, month, year format. See the section UTC representation in the <a href="#">Integration manual</a> for details.
14	mv	numeric	deg	-	Magnetic variation value
15	mvEW	character	-	-	Magnetic variation E/W indicator
16	posMode	character	-	A	Mode Indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
17	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
18	cs	hexadecimal	-	*57	Checksum
19	CRLF	character	-	-	Carriage return and line feed

## 2.8.6 VTG

### 2.8.6.1 Course over ground and ground speed

<b>Message</b>	<b>NMEA-NAV2-VTG</b> <b>Course over ground and ground speed</b>				
<b>Type</b>	Output				
<b>Comment</b>	Velocity is given as course over ground (COG) and speed over ground (SOG). To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.				
<b>Information</b>	Class/ID: 0xf7 0x05		Number of fields: 16		
<b>Structure</b>	\s:1*78\\$\xxVTG, cogt, cogtUnit, cogm, cogmUnit, sogn, sognUnit, sogk, sogkUnit, posMode*cs\r\ \n				
<b>Example</b>	\s:1*78\\$\\$GPVTG, 77.52, T, , M, 0.004, N, 0.008, K, A*06\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxVTG	string	-	\$GPVTG	VTG Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	cogt	numeric	degrees	77.52	Course over ground (true)
6	cogtUnit	character	-	T	Course over ground units: T (degrees true, fixed field)
7	cogm	numeric	degrees	-	Course over ground (magnetic)
8	cogmUnit	character	-	M	Course over ground units: M (degrees magnetic, fixed field)
9	sogn	numeric	knots	0.004	Speed over ground
10	sognUnit	character	-	N	Speed over ground units: N (knots, fixed field)
11	sogk	numeric	km/h	0.008	Speed over ground
12	sogkUnit	character	-	K	Speed over ground units: K (kilometers per hour, fixed field)
13	posMode	character	-	A	Mode indicator, see <a href="#">position fix flags description</a> (only available in NMEA 2.3 and later)
14	cs	hexadecimal	-	*06	Checksum

15	CRLF	character	-	-	Carriage return and line feed
----	------	-----------	---	---	-------------------------------

## 2.8.7 ZDA

### 2.8.7.1 Time and date

<b>Message</b>	<b>NMEA-NAV2-ZDA</b>				
	<b>Time and date</b>				
<b>Type</b>	Output				
<b>Comment</b>	UTC, day, month, year and local time zone. To identify the navigation data source for NMEA Secondary filter output, the alphanumeric string source-identification (s:) parameter is used in a TAG Block, in respect to NMEA 0183 Standard.				
<b>Information</b>	Class/ID: 0xf7 0x08		Number of fields: 13		
<b>Structure</b>	\s:1*78\\$(GPZDA,time,day,month,year,ltzh,ltzn)*cs\r\n				
<b>Example</b>	\s:1*78\\$\xxZDA,082710.00,16,09,2002,00,00*64\r\n				
<b>Payload:</b>					
<b>Field</b>	<b>Name</b>	<b>Format</b>	<b>Unit</b>	<b>Example</b>	<b>Description</b>
0	tagStart	string	-	\s:	NMEA TAG block start and parameter
1	source	numeric	-	1	NMEA TAG block source value (1 for secondary output messages)
2	tagCs	hexadecimal	-	*78	NMEA TAG checksum
3	tagEnd	string	-	\	NMEA TAG block end character
4	xxZDA	string	-	\$GPZDA	ZDA Message ID (xx = current Talker ID, see <a href="#">NMEA Talker IDs table</a> )
5	time	hhmmss.ss	-	082710.00	UTC Time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
6	day	dd	day	16	UTC day (range: 1-31)
7	month	mm	month	09	UTC month (range: 1-12)
8	year	yyyy	year	2002	UTC year
9	ltzh	xx	-	00	Local time zone hours (fixed field, always 00)
10	ltzn	zz	-	00	Local time zone minutes (fixed field, always 00)
11	cs	hexadecimal	-	*64	Checksum
12	CRLF	character	-	-	Carriage return and line feed

## 2.9 PUBX messages

Proprietary NMEA messages for u-blox positioning receivers. See also [NMEA-proprietary messages](#).

### 2.9.1 CONFIG (PUBX,41)

#### 2.9.1.1 Set protocols and baud rate

<b>Message</b>	<b>NMEA-PUBX-CONFIG</b>				
	<b>Set protocols and baud rate</b>				
<b>Type</b>	Set				
<b>Comment</b>					
<b>Information</b>	Class/ID: 0xf1 0x41		Number of fields: 9		
<b>Structure</b>	\$(PUBX,41,portId,inProto,outProto,baudrate,autobauding)*cs\r\n				

*Example*     \$PUBX,41,1,0007,0003,19200,0\*25\r\n

*Payload:*

Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	41	Proprietary message identifier
2	portId	numeric	-	1	ID of communication port. See the section Communication ports in the <a href="#">Integration manual</a> for details.
3	inProto	hexadecimal	-	0007	Input protocol mask. Bitmask, specifying which protocols(s) are allowed for input. See the section Communication ports in the <a href="#">Integration manual</a> for details.
4	outProto	hexadecimal	-	0003	Output protocol mask. Bitmask, specifying which protocols(s) are allowed for input. See the section Communication ports in the <a href="#">Integration manual</a> for details.
5	baudrate	numeric	bits/s	19200	Baud rate
6	autobauding	numeric	-	-	Autobauding: 1=enable, 0=disable (not supported on u-blox 5, set to 0)
7	cs	hexadecimal	-	*25	Checksum
8	CRLF	character	-	-	Carriage return and line feed

## 2.9.2 POSITION (PUBX,00)

### 2.9.2.1 Poll a PUBX,00 message

Message	NMEA-PUBX-POSITION Poll a PUBX,00 message				
Type	Poll request				
Comment	A PUBX,00 message is polled by sending the PUBX,00 message without any data fields.				
Information	Class/ID: 0xf1 0x00	Number of fields: 4			
Structure	\$PUBX,00*33\r\n				
Example	\$PUBX,00*33\r\n				
<i>Payload:</i>					
Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	00	Set to 00 to poll a PUBX,00 message
2	cs	hexadecimal	-	*33	Checksum
3	CRLF	character	-	-	Carriage return and line feed

### 2.9.2.2 Lat/Long position data

Message	NMEA-PUBX-POSITION Lat/Long position data				
Type	Output				
Comment	This message contains position solution data. The datum selection may be changed using the message <a href="#">UBX-CFG-DAT</a> .  The output of this message is dependent on the currently selected datum (default: WGS84).				
Information	Class/ID: 0xf1 0x00	Number of fields: 23			

**Structure**    \$PUBX,00,time,lat,NS,long,EW,altRef,navStat,hAcc,vAcc,SOG,COG,vVel,diffAge,HDOP,VDOP ↵  
 ,TDOP,numSvs,reserved,DR,\*cs\r\n

**Example**    \$PUBX,00,081350.00,4717.113210,N,00833.915187,E,546.589,G3,2.1,2.0,0.007,77.52,0.007 ↵  
 ,,0.92,1.19,0.77,9,0,0\*5F\r\n

**Payload:**

Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	00	Proprietary message identifier: 00
2	time	hhmmss.ss	-	081350.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
3	lat	ddmm. mmmm	-	4717.113210	Latitude (degrees and minutes), see <a href="#">format description</a>
4	NS	character	-	N	North/South Indicator
5	long	dddmm. mmmm	-	00833.915187	Longitude (degrees and minutes), see <a href="#">format description</a>
6	EW	character	-	E	East/West indicator
7	altRef	numeric	m	546.589	Altitude above user datum ellipsoid
8	navStat	string	-	G3	Navigation Status: <ul style="list-style-type: none"> <li>• NF = No Fix</li> <li>• DR = Dead reckoning only solution</li> <li>• G2 = Stand alone 2D solution</li> <li>• G3 = Stand alone 3D solution</li> <li>• D2 = Differential 2D solution</li> <li>• D3 = Differential 3D solution</li> <li>• RK = Combined GPS + dead reckoning solution</li> <li>• TT = Time only solution</li> </ul>
9	hAcc	numeric	m	2.1	Horizontal accuracy estimate
10	vAcc	numeric	m	2.0	Vertical accuracy estimate
11	SOG	numeric	km/h	0.007	Speed over ground
12	COG	numeric	deg	77.52	Course over ground
13	vVel	numeric	m/s	0.007	Vertical velocity (positive downwards)
14	diffAge	numeric	s	-	Age of differential corrections (blank when DGPS is not used)
15	HDOP	numeric	-	0.92	HDOP, Horizontal Dilution of Precision
16	VDOP	numeric	-	1.19	VDOP, Vertical Dilution of Precision
17	TDOP	numeric	-	0.77	TDOP, Time Dilution of Precision
18	numSvs	numeric	-	9	Number of satellites used in the navigation solution
19	reserved	numeric	-	-	Reserved, always set to 0
20	DR	numeric	-	-	DR used
21	cs	hexadecimal	-	*5B	Checksum
22	CRLF	character	-	-	Carriage return and line feed

## 2.9.3 RATE (PUBX,40)

### 2.9.3.1 Set NMEA message output rate

Message	NMEA-PUBX-RATE Set NMEA message output rate
Type	Set

<b>Comment</b>	Set/Get message rate configuration (s) to/from the receiver.				
	<ul style="list-style-type: none"> <li>Send rate is relative to the event a message is registered on. For example, if the rate of a navigation message is set to 2, the message is sent every second navigation solution.</li> </ul>				
<b>Information</b>	Class/ID: 0xf1 0x40		Number of fields: 11		
<b>Structure</b>	\$PUBX, 40, msgId, rddc, rus1, rus2, rusb, rspi, reserved*cs\r\n				
<b>Example</b>	\$PUBX, 40, GLL, 1, 0, 0, 0, 0, 0*5D\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	ID	numeric	-	40	Proprietary message identifier
2	msgId	string	-	GLL	NMEA message identifier
3	rddc	numeric	cycles	1	output rate on DDC <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
4	rus1	numeric	cycles	1	output rate on USART 1 <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
5	rus2	numeric	cycles	1	output rate on USART 2 <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
6	rusb	numeric	cycles	1	output rate on USB <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
7	rspi	numeric	cycles	1	output rate on SPI <ul style="list-style-type: none"> <li>0 disables that message from being output on this port</li> <li>1 means that this message is output every epoch</li> </ul>
8	reserved	numeric	-	-	Reserved: always fill with 0
9	cs	hexadecimal	-	*5D	Checksum
10	CRLF	character	-	-	Carriage return and line feed

## 2.9.4 SVSTATUS (PUBX,03)

### 2.9.4.1 Poll a PUBX,03 message

<b>Message</b>	<b>NMEA-PUBX-SVSTATUS</b>				
	<b>Poll a PUBX,03 message</b>				
<b>Type</b>	Poll request				
<b>Comment</b>	A PUBX,03 message is polled by sending the PUBX,03 message without any data fields.				
<b>Information</b>	Class/ID: 0xf1 0x03		Number of fields: 4		
<b>Structure</b>	\$PUBX, 03*30\r\n				
<b>Example</b>	\$PUBX, 03*30\r\n				
<b>Payload:</b>					
Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence

1	msgId	numeric	-	03	Set to 03 to poll a PUBX,03 message
2	cs	hexadecimal	-	*30	Checksum
3	CRLF	character	-	-	Carriage return and line feed

### 2.9.4.2 Satellite status

Message	NMEA-PUBX-SVSTATUS Satellite status				
Type	Output				
Comment	The PUBX,03 message contains satellite status information.				
Information	Class/ID: 0xf1 0x03		Number of fields: 5 + n-6		
Structure	\$PUBX,03,GT{,sv,s,az,el,cno,lck},*cs\r\n				
Example	\$PUBX,03,11,23,-,,45,010,29,-,,46,013,07,-,,42,015,08,U,067,31,42,025,10,U,195,33, ,46,026,18,U,326,08,39,026,17,-,,32,015,26,U,306,66,48,025,27,U,073,10,36,026,28,U, 089,61,46,024,15,-,,39,014*0D\r\n				
Payload:					
Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	03	Proprietary message identifier: 03
2	n	numeric	-	11	Number of GNSS satellites tracked
<i>Start of repeated group (n times)</i>					
3 + n-6	sv	numeric	-	23	Satellite ID according to UBX svId mapping (see <a href="#">Satellite Numbering</a> )
4 + n-6	s	character	-	-	Satellite status: <ul style="list-style-type: none"> <li>- = Not used</li> <li>U = Used in solution</li> <li>e = Ephemeris available, but not used for navigation</li> </ul>
5 + n-6	az	numeric	deg	-	Satellite azimuth (range: 0-359)
6 + n-6	el	numeric	deg	-	Satellite elevation (<= 90)
7 + n-6	cno	numeric	dBHz	45	Signal strength (C/N0, range 0-99), blank when not tracking
8 + n-6	lck	numeric	s	010	Satellite carrier lock time (range: 0-64) <ul style="list-style-type: none"> <li>0 = code lock only</li> <li>64 = lock for 64 seconds or more</li> </ul>
<i>End of repeated group (n times)</i>					
3 + n-6	cs	hexadecimal	-	*0D	Checksum
4 + n-6	CRLF	character	-	-	Carriage return and line feed

### 2.9.5 TIME (PUBX,04)

#### 2.9.5.1 Poll a PUBX,04 message

Message	NMEA-PUBX-TIME Poll a PUBX,04 message				
Type	Poll request				
Comment	A PUBX,04 message is polled by sending the PUBX,04 message without any data fields.				
Information	Class/ID: 0xf1 0x04		Number of fields: 4		
Structure	\$PUBX,04*37\r\n				

**Example**     \$PUBX,04\*37\r\n

**Payload:**

Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	04	Set to 04 to poll a PUBX,04 message
2	cs	hexadecimal	-	*37	Checksum
3	CRLF	character	-	-	Carriage return and line feed

### 2.9.5.2 Time of day and clock information

**Message**     **NMEA-PUBX-TIME**

**Time of day and clock information**

**Type**        Output

**Comment**

**Information**   Class/ID: 0xf1 0x04        Number of fields: 12

**Structure**    \$PUBX,04,time,date,utcTow,utcWk,leapSec,clkBias,clkDrift,tpGran,\*cs\r\n

**Example**     \$PUBX,04,073731.00,091202,113851.00,1196,15D,1930035,-2660.664,43,\*3C\r\n

**Payload:**

Field	Name	Format	Unit	Example	Description
0	PUBX	string	-	\$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	04	Proprietary message identifier: 04
2	time	hhmmss.ss	-	073731.00	UTC time. See the section UTC representation in the <a href="#">Integration manual</a> for details.
3	date	ddmmyy	-	091202	UTC date, day, month, year. See the section UTC representation in the <a href="#">Integration manual</a> for details.
4	utcTow	numeric	s	113851.00	UTC time of week
5	utcWk	numeric	-	1196	UTC week number, continues beyond 1023
6	leapSec	numeric/ text	s	15D	Leap seconds (not supported for protocol versions less than 13.01)  The number is marked with a <i>D</i> if the value is the firmware default value. If the value is not marked it has been received from a satellite.
7	clkBias	numeric	ns	1930035	Receiver clock bias
8	clkDrift	numeric	ns/s	-2660.664	Receiver clock drift
9	tpGran	numeric	ns	43	Time pulse granularity, the quantization error of the TIMEPULSE pin
10	cs	hexadecimal	-	*3C	Checksum
11	CRLF	character	-	-	Carriage return and line feed

## 3 UBX protocol

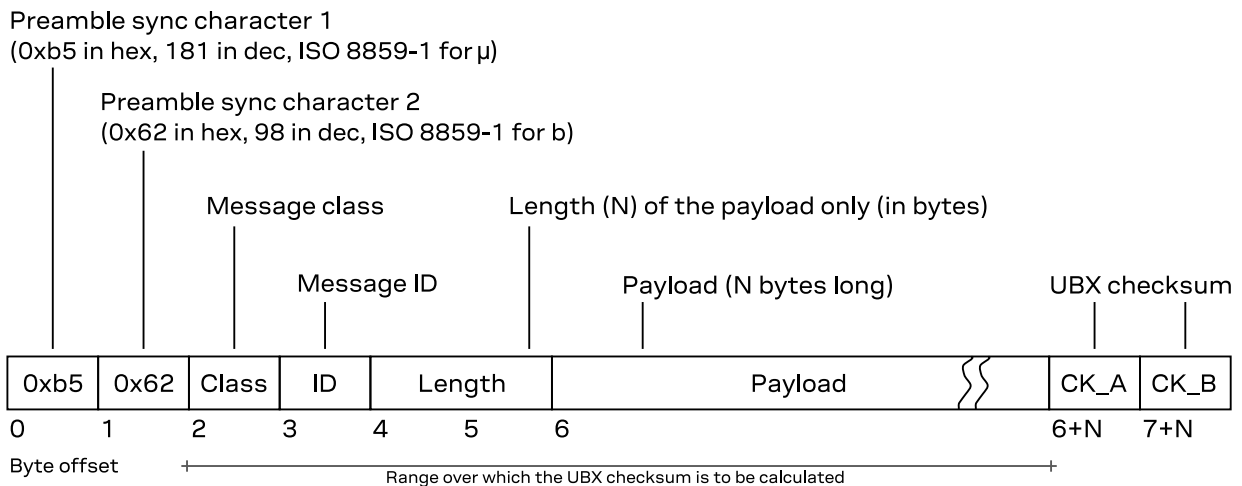

### 3.1 UBX protocol key features

u-blox receivers support a u-blox-proprietary protocol to communicate with a host computer. This protocol has the following key features:

- Compact – uses 8-bit binary data
- Checksum protected – uses a low-overhead checksum algorithm
- Modular – uses a two-stage message identifier (Class and Message ID)

### 3.2 UBX frame structure

The structure of a basic UBX frame is shown in the following diagram.

- Every *frame* starts with a 2-byte *preamble* consisting of two synchronization characters: 0xb5 and 0x62.
- A 1-byte *message class* field follows. A class is a group of messages that are related to each other.
- A 1-byte *message ID* field defines the message that is to follow.
- A 2-byte *length* field follows. The length is defined as being that of the payload only. It does not include the preamble, message class, message ID, length, or [UBX checksum](#) fields. The number format of the length field is an unsigned little-endian 16-bit integer (a "U2" in [UBX data types](#)).
- The *payload* field contains a variable number (= *length*) of bytes.
- The two 1-byte *CK\_A* and *CK\_B* fields hold a 16-bit checksum whose calculation is defined in [UBX checksum](#) section. This concludes the frame.

### 3.3 UBX payload definition rules

This section contains the rules and guidelines for UBX message payloads. See also [UBX message example](#).

#### 3.3.1 UBX structure packing

Values are placed in such an order that structure packing is not a problem. This means that two-byte values shall start on offsets that are a multiple of two; four-byte values shall start at a multiple of four; and so on.

#### 3.3.2 UBX reserved elements

Some messages contain reserved fields or bits to allow for future expansion. The contents of these elements should be ignored in output messages and must be set to zero in input messages. Where a message is output and subsequently returned to the receiver as an input message, reserved elements can either be explicitly set to zero or left with whatever value they were output with.

For fields in a bitfield the same rules apply. Note that bits not described are automatically reserved and are not explicitly stated (see [UBX message example](#)).

#### 3.3.3 UBX undefined values

The description of some fields provide specific meanings for specific values. For example, the field `gnssId` appears in many UBX messages and uses 0 to indicate GPS, 1 for SBAS and so on (see [GNSS identifiers](#) for details); however it is usually stored in a byte with far more possible values than the handful currently defined. All such undefined values are reserved for future expansion and therefore should not be used.

#### 3.3.4 UBX conditional values

Some UBX messages use validity flag fields to indicate whether the values of some value fields are valid. For example the `UBX-NAV-PVT` message has the `validDate` and `validTime` fields that indicate whether the date (`year`, `month` and `day` fields), and, respectively, the time (`hour`, `min` and `sec` fields) are valid. This means that these value fields will only contain meaningful data if the corresponding flag field is set (has the value 1).

#### 3.3.5 UBX data types

The following data types (number formats) are defined.

Name	Type	Size (Bytes)	Range	Resolution
U1	unsigned 8-bit integer	1	$0 \dots 2^8 - 1$	1
I1	signed 8-bit integer, two's complement	1	$-2^7 \dots 2^7 - 1$	1
X1	8-bit bitfield	1	n/a	n/a
U2	unsigned little-endian 16-bit integer	2	$0 \dots 2^{16} - 1$	1
I2	signed little-endian 16-bit integer, two's complement	2	$-2^{15} \dots 2^{15} - 1$	1
X2	16-bit little-endian bitfield	2	n/a	n/a
U4	unsigned little-endian 32-bit integer	4	$0 \dots 2^{32} - 1$	1
I4	signed little-endian 32-bit integer, two's complement	4	$-2^{31} \dots 2^{31} - 1$	1
X4	32-bit little-endian bitfield	4	n/a	n/a

Name	Type	Size (Bytes)	Range	Resolution
R4	IEEE 754 single (32-bit) precision	4	$-2^{127} \dots 2^{127}$	$\sim \text{value} \cdot 2^{-24}$
R8	IEEE 754 double (64-bit) precision	8	$-2^{1023} \dots 2^{1023}$	$\sim \text{value} \cdot 2^{-53}$
CH	ASCII / ISO 8859-1 char (8-bit)	1	n/a	n/a
U <sub>.n</sub>	unsigned bitfield value of <i>n</i> bits width	var.	variable	variable
I <sub>.n</sub>	signed (two's complement) bitfield value of <i>n</i> bits width	var.	variable	variable
S <sub>.n</sub>	signed bitfield value of <i>n</i> bits width, in sign (most significant bit) and magnitude (remaining bits) notation	var.	variable	variable

### 3.3.6 UBX fields scale and unit

Fields in UBX messages can have a unit defined. Whenever possible, SI units and symbols are used (e.g. "m" for meters, "s" for seconds). For civil (UTC) time representation units of years (y), months (month), days (d), hours (h), minutes (min) and seconds (s) are used.

Fields in UBX messages can have a scale factor defined. Unity (factor 1) is assumed if no scale is specified. For integer type fields this is often combined with a unit. When a scale is combined with a unit, the scale represents the smallest storage unit. For example, if meters (m) are expressed (stored) in centimeters the scale would be 0.01 (or 1e-2). This is equivalent of specifying a unit of centimeters (cm) and no scale.

### 3.3.7 UBX repeated fields

There are two types of repetitions in UBX messages. The first type specifies that a single field is repeated a constant number of times. This repetition is defined in the type of the field. For example, the [UBX message example](#) can specify a field `data` of type `U1[5]`. In this case the `data` field should be interpreted as an array of five U1 values.

The second type of repetition in messages is referred to as *repeated groups*, which groups one or more fields into a block of payload data. There are several types of repetition:

- The number of repetitions of *variable-by-field group* is indicated by another, earlier field in the same message. The number of repetitions can be zero or more, depending on the value of the referenced field.
- A *constant group* has a constant number of repetitions.
- An *optional group* is repeated zero or one times, depending on the available payload data. That is, the fields are present in the message only if the payload of the message is large enough to cover the whole group of fields.
- The number of repetitions of a *variable-by-size group* is given by the available payload size. The group will repeat until there is not enough payload data left to cover the whole group of fields another time.

Note that only some combinations of repeated groups of fields are possible in a single message. See also [UBX payload decoding](#).

### 3.3.8 UBX payload decoding

UBX message payloads are designed so that the data (fields) can be extracted by a single pass through the payload from start to end. Fixed-size messages are the trivial case where the offset of all fields is unambiguously defined. Variable-size messages have variable number of repetitions of one or multiple groups of fields. For groups where the number of repetitions is given by the value of another field, that field can always be found at a fixed offset in the message payload before the respective group of fields. Groups whose number of repetitions depend on the payload size can only

be the last group of fields in a message and only one such group may exist in a message. See also [UBX repeated fields](#).

### 3.4 UBX checksum

The checksum is calculated over the message, starting and including the class field up until, but excluding, the checksum fields (see the figure [UBX frame structure](#)).

The checksum algorithm used is the 8-bit Fletcher algorithm, which is used in the TCP standard [RFC 1145](#)). This algorithm works as follows:

- `Buffer[N]` is an array of bytes that contains the data over which the checksum is to be calculated.
- The two `CK_A` and `CK_B` values are 8-bit unsigned integers, only! If implementing with larger-sized integer values, make sure to mask both `CK_A` and `CK_B` with the value `0xff` after both operations in the loop.
- After the loop, the two `UI` values contain the checksum, transmitted after the message payload, which concludes the frame.

```
1 CK_A = 0, CK_B = 0
2 For (I = 0; I < N; I++)
3 {
4     CK_A = CK_A + Buffer[I]
5     CK_B = CK_B + CK_A
6 }
```

### 3.5 UBX message flow

There are certain features associated with the messages being sent back and forth:

#### 3.5.1 UBX acknowledgement

When messages from the class CFG are sent to the receiver, the receiver will send an "acknowledge" ([UBX-ACK-ACK](#)) or a "not acknowledge" ([UBX-ACK-NAK](#)) message back to the sender, depending on whether or not the message was processed correctly.

Some messages from other classes also use the same acknowledgement mechanism.

#### 3.5.2 UBX polling mechanism

All messages that are output by the receiver in a periodic manner (i.e. messages in classes UBX-MON, UBX-NAV and UBX-RXM) and Get/Set type messages, such as the configuration messages in the UBX-CFG class, can also be polled.

The UBX protocol is designed so that messages can be polled by sending the message required to the receiver but without a payload (or with just a single parameter that identifies the poll request). The receiver then responds with the same message with the payload populated.

### 3.6 GNSS, satellite and signal numbering

See [GNSS, satellite and signal identifiers](#) for details on how GNSS, satellites and signals are numbered in the UBX protocol.

### 3.7 UBX message example

This is an example of the definition of UBX messages as shown in the following sections.

<b>Message</b>	<b>UBX-DEMO-EXAMPLE</b>				
①	<b>Example demo message</b>				
<b>Type</b> ②	Periodic/pollled				
<b>Comment</b>	This is a comment that describes the use of the demo example message.				
③	There can be references to other sections in the documentation (such as: <a href="#">UBX protocol</a> ). ↪ Note that there can be important remarks here.				
<b>Message</b> ④	<i>Header</i>	<i>Class ID</i>	<i>Length (bytes)</i>	<i>Payload</i>	<i>Checksum</i>
<b>Structure</b>	0xb5 0x62 0x01 0x07		16 + numRepeat*4	see below	CK_A CK_B
<b>Payload description:</b> ⑤					
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>
0	U4	aField	-	-	a field that contains an unsigned integer with no particular scale or unit
4	I4	anotherField	1e-2	m	a field that contains a length in meters (m) with a scale of 1e-2 (= 0.01), i.e. a length in centimeters
8	X2	bitfield ⑥	-	-	this field contains flags or values smaller than one byte, whose definition follows below (bits not described are <a href="#">reserved</a> )
	bit 0 U:1	aFieldValid	-	-	the first bit in bitfield indicates whether the aField is valid or not (see <a href="#">UBX conditional values</a> )
	bit 1 U:1	someFlag	-	-	the second bit is a flag (1 = true, 0 = false)
	bits 5...2 U:4	aBitFieldValue	-	-	a 4-bits value (range: 0...15)
10	U1[5] ⑦	reserved0	-	-	a <a href="#">reserved</a> field, whose value shall be ignored (in output messages) or set to 0 (in input messages)
15	U1	numRepeat	-	-	number of repetitions in the group of fields below
<b>Start of repeated group (numRepeat times)</b> ⑧					
16 + n*4	I2	someValue	-	-	a signed value in a repeated group of fields
18 + n*4	U2	anotherValue	-	-	another value in a repeated group of fields
<b>End of repeated group (numRepeat times)</b>					

① The first line shows the message name (see [Naming](#)). The second line shows a short description of the message.

② The message type (see [Message types](#)).

③ This section contains comments that describe the message. Often links to other related sections in the documentation or other related messages are found here.

④ The message structure gives the parameters for the [UBX frame structure](#), notably the message class and message ID values and the payload length. For many messages the payload length is a fixed number (of bytes). Messages that contain repeated blocks of information (fields) have a variable payload (see [UBX repeated fields](#)).

⑤ The message payload definition is given as a list of fields and their parameters. Each field starts at a specified offset (in bytes) in the payload (see also [UBX structure packing](#)), is of a specific type

(see [UBX data types](#)), has a unique name (within the message), and a description. Optionally, fields can have a scale and/or a unit (see [UBX fields scale and unit](#)).

6 Bitfields ("X" types) are broken down into smaller parts. Each part can be one or more bits wide. Values that are two or more bits wide can be unsigned or one of two signed value representation (see [UBX data types](#)). Note that the ten unused bits 15...6 are not explicitly stated as [UBX reserved elements](#).

7 Fields can be arrays of values of the same type (see [UBX repeated fields](#)).

8 Groups of fields can be repeated in the payload. The number of repetitions can be given by another field in the message (this example), a constant number, zero or one times (known as "optional group"), or derived from the remaining payload size (labeled as "repeated N times"). See also [UBX repeated fields](#) and [UBX payload decoding](#).

### 3.8 UBX messages overview

<b>Message</b>	<b>Class/ID</b>	<b>Description (Type)</b>
<b>UBX-ACK – Acknowledgement and negative acknowledgement messages</b>		
<a href="#">UBX-ACK-ACK</a>	0x05 0x01	• Message acknowledged (Output)
<a href="#">UBX-ACK-NAK</a>	0x05 0x00	• Message not acknowledged (Output)
<b>UBX-CFG – Configuration and command messages</b>		
<a href="#">UBX-CFG-ANT</a>	0x06 0x13	• Antenna control settings (Get/set)
<a href="#">UBX-CFG-CFG</a>	0x06 0x09	• Clear, save and load configurations (Command)
<a href="#">UBX-CFG-DAT</a>	0x06 0x06	• Set user-defined datum (Set) • Get currently defined datum (Get)
<a href="#">UBX-CFG-GEOFENCE</a>	0x06 0x69	• Geofencing configuration (Get/set)
<a href="#">UBX-CFG-GNSS</a>	0x06 0x3e	• GNSS system configuration (Get/set)
<a href="#">UBX-CFG-INF</a>	0x06 0x02	• Poll configuration for one protocol (Poll request) • Information message configuration (Get/set)
<a href="#">UBX-CFG-ITFM</a>	0x06 0x39	• Jamming/interference monitor configuration (Get/set)
<a href="#">UBX-CFG-LOGFILTER</a>	0x06 0x47	• Data logger configuration (Get/set)
<a href="#">UBX-CFG-MSG</a>	0x06 0x01	• Poll a message configuration (Poll request) • Set message rate(s) (Get/set) • Set message rate (Get/set)
<a href="#">UBX-CFG-NAV5</a>	0x06 0x24	• Navigation engine settings (Get/set)
<a href="#">UBX-CFG-NAVX5</a>	0x06 0x23	• Navigation engine expert settings (Get/set)
<a href="#">UBX-CFG-NMEA</a>	0x06 0x17	• Extended NMEA protocol configuration V1 (Get/set)
<a href="#">UBX-CFG-ODO</a>	0x06 0x1e	• Odometer, low-speed COG engine settings (Get/set)
<a href="#">UBX-CFG-PRT</a>	0x06 0x00	• Polls the configuration for one I/O port (Poll request) • Port configuration for UART ports (Get/set) • Port configuration for USB port (Get/set) • Port configuration for SPI port (Get/set) • Port configuration for I2C (DDC) port (Get/set)
<a href="#">UBX-CFG-PWR</a>	0x06 0x57	• Put receiver in a defined power state (Set)
<a href="#">UBX-CFG-RATE</a>	0x06 0x08	• Navigation/measurement rate settings (Get/set)
<a href="#">UBX-CFG-RINV</a>	0x06 0x34	• Contents of remote inventory (Get/set)
<a href="#">UBX-CFG-RST</a>	0x06 0x04	• Reset receiver / Clear backup data structures (Command)
<a href="#">UBX-CFG-SBAS</a>	0x06 0x16	• SBAS configuration (Get/set)
<a href="#">UBX-CFG-TMODE2</a>	0x06 0x3d	• Time mode settings 2 (Get/set)

<b>Message</b>	<b>Class/ID</b>	<b>Description (Type)</b>
UBX-CFG-TP5	0x06 0x31	• Time pulse parameters (Get/set)
UBX-CFG-USB	0x06 0x1b	• USB configuration (Get/set)
UBX-CFG-VALDEL	0x06 0x8c	• Delete configuration item values (Set) • Delete configuration item values (with transaction) (Set)
UBX-CFG-VALGET	0x06 0x8b	• Get configuration items (Poll request) • Configuration items (Polled)
UBX-CFG-VALSET	0x06 0x8a	• Set configuration item values (Set) • Set configuration item values (with transaction) (Set)
<b>UBX-INF – Information messages</b>		
UBX-INF-DEBUG	0x04 0x04	• ASCII output with debug contents (Output)
UBX-INF-ERROR	0x04 0x00	• ASCII output with error contents (Output)
UBX-INF-NOTICE	0x04 0x02	• ASCII output with informational contents (Output)
UBX-INF-TEST	0x04 0x03	• ASCII output with test contents (Output)
UBX-INF-WARNING	0x04 0x01	• ASCII output with warning contents (Output)
<b>UBX-LOG – Logging messages</b>		
UBX-LOG-CREATE	0x21 0x07	• Create log file (Command)
UBX-LOG-ERASE	0x21 0x03	• Erase logged data (Command)
UBX-LOG-FINDTIME	0x21 0x0e	• Find index of a log entry based on a given time (Input) • Response to FINDTIME request (Output)
UBX-LOG-INFO	0x21 0x08	• Poll for log information (Poll request) • Log information (Output)
UBX-LOG-RETRIEVE	0x21 0x09	• Request log data (Command)
UBX-LOG-RETRIEVEPOS	0x21 0x0b	• Position fix log entry (Output)
UBX-LOG-RETRIEVEPOSEXTRA	0x21 0x0f	• Odometer log entry (Output)
UBX-LOG-RETRIEVESTRING	0x21 0x0d	• Byte string log entry (Output)
UBX-LOG-STRING	0x21 0x04	• Store arbitrary string in on-board flash (Command)
<b>UBX-MGA – GNSS assistance (A-GNSS) messages</b>		
UBX-MGA-ACK	0x13 0x60	• Multiple GNSS acknowledge message (Output)
UBX-MGA-BDS	0x13 0x03	• BeiDou ephemeris assistance (Input) • BeiDou almanac assistance (Input) • BeiDou health assistance (Input) • BeiDou UTC assistance (Input) • BeiDou ionosphere assistance (Input)
UBX-MGA-DBD	0x13 0x80	• Poll the navigation database (Poll request) • Navigation database dump entry (Input/output)
UBX-MGA-GAL	0x13 0x02	• Galileo ephemeris assistance (Input) • Galileo almanac assistance (Input) • Galileo GPS time offset assistance (Input) • Galileo UTC assistance (Input)
UBX-MGA-GLO	0x13 0x06	• GLONASS ephemeris assistance (Input) • GLONASS almanac assistance (Input) • GLONASS auxiliary time offset assistance (Input)
UBX-MGA-GPS	0x13 0x00	• GPS ephemeris assistance (Input) • GPS almanac assistance (Input) • GPS health assistance (Input) • GPS UTC assistance (Input) • GPS ionosphere assistance (Input)
UBX-MGA-INI	0x13 0x40	• Initial position assistance (Input)

Message	Class/ID	Description (Type)
		<ul style="list-style-type: none"> <li>Initial time assistance (Input)</li> <li>Initial clock drift assistance (Input)</li> <li>Initial frequency assistance (Input)</li> </ul>
UBX-MGA-QZSS	0x13 0x05	<ul style="list-style-type: none"> <li>QZSS ephemeris assistance (Input)</li> <li>QZSS almanac assistance (Input)</li> <li>QZSS health assistance (Input)</li> </ul>
<b>UBX-MON – Monitoring messages</b>		
UBX-MON-COMMS	0x0a 0x36	<ul style="list-style-type: none"> <li>Communication port information (Periodic/polled)</li> </ul>
UBX-MON-GNSS	0x0a 0x28	<ul style="list-style-type: none"> <li>Information message major GNSS selection (Polled)</li> </ul>

<b>UBX-UPD – Firmware update messages</b>		
UBX-UPD-SOS	0x09 0x14	• Poll backup restore status (Poll request) • Create backup in flash (Command)

Message	Class/ID	Description (Type)
		<ul style="list-style-type: none"> <li>Clear backup in flash (Command)</li> <li>Backup creation acknowledged (Output)</li> <li>System restored from backup (Output)</li> </ul>

## 3.9 UBX-ACK (0x05)

The messages in the UBX-ACK class are used to indicate acknowledgement or rejection (i.e. negative acknowledgement) of input messages, such as UBX-CFG messages.

### 3.9.1 UBX-ACK-ACK (0x05 0x01)

#### 3.9.1.1 Message acknowledged

Message	UBX-ACK-ACK					
	Message acknowledged					
Type	Output					
Comment	Output upon processing of an input message. A UBX-ACK-ACK is sent as soon as possible but at least within one second.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x05	0x01	2	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	clsID	-	-	Class ID of the Acknowledged Message	
1	U1	msgID	-	-	Message ID of the Acknowledged Message	

### 3.9.2 UBX-ACK-NAK (0x05 0x00)

#### 3.9.2.1 Message not acknowledged

Message	UBX-ACK-NAK					
	Message not acknowledged					
Type	Output					
Comment	Output upon processing of an input message. A UBX-ACK-NAK is sent as soon as possible but at least within one second.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x05	0x00	2	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	clsID	-	-	Class ID of the Not-Acknowledged Message	
1	U1	msgID	-	-	Message ID of the Not-Acknowledged Message	

## 3.10 UBX-CFG (0x06)

The messages in the UBX-CFG class are used to configure the receiver and poll current configuration values as well as for sending commands to the receiver. Unless stated otherwise, any message in this class sent to the receiver is either acknowledged (by a [UBX-ACK-ACK](#) message) if processed successfully or rejected (with a [UBX-ACK-NAK](#) message) if processed unsuccessfully.

### 3.10.1 UBX-CFG-ANT (0x06 0x13)

### 3.10.1.1 Antenna control settings

<b>Message</b>	<b>UBX-CFG-ANT</b>					
	<b>Antenna control settings</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p> <p>This message allows the user to configure the antenna supervisor.</p> <p>The antenna supervisor can be used to detect the status of an active antenna and control it. It can be used to turn off the supply to the antenna in the event of a short circuit (for example) or to manage power consumption in power save mode.</p> <p>Refer to antenna supervisor configuration in the Integration manual for more information regarding the behavior of the antenna supervisor.</p> <p>Refer to <a href="#">UBX-MON-RF</a> for a description of the fields in the message used to obtain the status of the antenna.</p> <p>Note that not all pins can be used for antenna supervisor operation, it is recommended that you use the default pins, consult the <a href="#">Integration manual</a> if you need to use other pins.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x13	4	see below	CK_A CK_B
<b>Payload description:</b>						
<b>Byte offset</b>	<b>Type</b>	<b>Name</b>	<b>Scale</b>	<b>Unit</b>	<b>Description</b>	
0	X2	flags	-	-	Antenna flag mask	
bit 0	U:1	svcs	-	-	Enable antenna supply voltage control signal	
bit 1	U:1	scd	-	-	Enable short circuit detection	
bit 2	U:1	ocd	-	-	Enable open circuit detection	
bit 3	U:1	pdwnOnSCD	-	-	Power down antenna supply if short circuit is detected. (only in combination with bit 1)	
bit 4	U:1	recovery	-	-	Enable automatic recovery from short state	
2	X2	pins	-	-	Antenna pin configuration	
bits 4...0	U:5	pinSwitch	-	-	PIO-pin used for switching antenna supply	
bits 9...5	U:5	pinSCD	-	-	PIO-pin used for detecting a short in the antenna supply	
bits 14...10	U:5	pinOCD	-	-	PIO-pin used for detecting open/not connected antenna	
bit 15	U:1	reconfig	-	-	if set to one, and this command is sent to the receiver, the receiver will reconfigure the pins as specified.	

### 3.10.2 UBX-CFG-CFG (0x06 0x09)

#### 3.10.2.1 Clear, save and load configurations

<b>Message</b>	<b>UBX-CFG-CFG</b>					
	<b>Clear, save and load configurations</b>					
<b>Type</b>	Command					
<b>Comment</b>	<p>See <a href="#">Receiver configuration</a> for a detailed description on how receiver configuration should be used. The behavior of this message has changed for protocol versions greater than 23.01. Use UBX-CFG-VALSET and UBX-CFG-VALDEL with the appropriate layers instead. These new messages support selective saving and clearing to retain the behavior removed from this message. The three masks which were used to clear, save and load a subsection of configuration have lost their meaning. It is no longer possible to save or clear a subsection of the configuration using this message. The behavior of the masks is now:</p> <ul style="list-style-type: none"> <li>if any bit is set in the clearMask: all configuration in the selected non-volatile memory is deleted</li> <li>if any bit is set in the saveMask: all current configuration is stored (copied) to the selected layers</li> </ul>					

- if any bit is set in the loadMask: The current configuration is discarded and rebuilt from all the lower layers

Note that commands can be combined. The sequence of execution is clear, save, then load.

🔗 This message is deprecated in protocol versions greater than 23.01. Use [UBX-CFG-VALSET](#), [UBX-CFG-VALGET](#), [UBX-CFG-VALDEL](#) instead.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x09	12 + [0,1]	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	X4	clearMask	-	-	Mask for configuration to clear
bits 31...0	U:32	clearAll	-	-	Clear all saved configuration from the selected non-volatile memory if any bit is set
4	X4	saveMask	-	-	Mask for configuration to save
bits 31...0	U:32	saveAll	-	-	Save all current configuration to the selected non-volatile memory if any bit is set
8	X4	loadMask	-	-	Mask for configuration to load
bits 31...0	U:32	loadAll	-	-	Discard current configuration and rebuilt it from lower non-volatile memory layers if any bit is set

Start of optional group

12	X1	deviceMask	-	-	Mask which selects the memory devices for saving and/or clearing operation Note that if a deviceMask is not provided, the receiver defaults the operation requested to battery-backed RAM (BBR) and Flash (if available)
bit 0	U:1	devBBR	-	-	Battery-backed RAM
bit 1	U:1	devFlash	-	-	Flash
bit 2	U:1	devEEPROM	-	-	EEPROM (only supported for protocol versions less than 14.00)
bit 4	U:1	devSpiFlash	-	-	SPI Flash (only supported for protocol versions less than 14.00)

End of optional group

### 3.10.3 UBX-CFG-DAT (0x06 0x06)

#### 3.10.3.1 Set user-defined datum

<b>Message</b>	<b>UBX-CFG-DAT</b> <b>Set user-defined datum</b>
----------------	---

Type Set

Comment **This message is deprecated in protocol versions greater than 23.01. Use [UBX-CFG-VALSET](#), [UBX-CFG-VALGET](#), [UBX-CFG-VALDEL](#) instead.**

See the [Legacy UBX Message Fields Reference](#) for the corresponding configuration item.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x06	44	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	R8	majA	-	m	Semi-major axis ( accepted range = 6,300,000.0 to 6,500,000.0 meters ).
8	R8	flat	-	-	1.0 / flattening ( accepted range is 0.0 to 500.0 ).

16	R4	dX	-	m	X axis shift at the origin ( accepted range is +/- 5000.0 meters ).
20	R4	dY	-	m	Y axis shift at the origin ( accepted range is +/- 5000.0 meters ).
24	R4	dZ	-	m	Z axis shift at the origin ( accepted range is +/- 5000.0 meters ).
28	R4	rotX	-	s	Rotation about the X axis ( accepted range is +/- 20.0 milli-arc seconds ).
32	R4	rotY	-	s	Rotation about the Y axis ( accepted range is +/- 20.0 milli-arc seconds ).
36	R4	rotZ	-	s	Rotation about the Z axis ( accepted range is +/- 20.0 milli-arc seconds ).
40	R4	scale	-	ppm	Scale change ( accepted range is 0.0 to 50.0 parts per million ).

### 3.10.3.2 Get currently defined datum

<b>Message</b>	<b>UBX-CFG-DAT</b>					
	<b>Get currently defined datum</b>					
Type	Get					
Comment	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p> <p>Returns the parameters of the currently defined datum. If no user-defined datum has been set, this will default to WGS84.</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x06	52	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U2	datumNum	-	-	Datum number: 0 = WGS84, 0xFFFF = user-defined (extra values are defined for protocol versions less than 13.00)	
2	CH[6]	datumName	-	-	ASCII string: WGS84 or USER (extra values are defined for protocol versions less than 13.00)	
8	R8	majA	-	m	Semi-major axis ( accepted range = 6,300,000.0 to 6,500,000.0 meters ).	
16	R8	flat	-	-	1.0 / flattening ( accepted range is 0.0 to 500.0 ).	
24	R4	dX	-	m	X axis shift at the origin ( accepted range is +/- 5000.0 meters ).	
28	R4	dY	-	m	Y axis shift at the origin ( accepted range is +/- 5000.0 meters ).	
32	R4	dZ	-	m	Z axis shift at the origin ( accepted range is +/- 5000.0 meters ).	
36	R4	rotX	-	s	Rotation about the X axis ( accepted range is +/- 20.0 milli-arc seconds ).	
40	R4	rotY	-	s	Rotation about the Y axis ( accepted range is +/- 20.0 milli-arc seconds ).	
44	R4	rotZ	-	s	Rotation about the Z axis ( accepted range is +/- 20.0 milli-arc seconds ).	

48	R4	scale	-	ppm	Scale change ( accepted range is 0.0 to 50.0 parts per million ).

### 3.10.4 UBX-CFG-GEOFENCE (0x06 0x69)

#### 3.10.4.1 Geofencing configuration

<b>Message</b>	<b>UBX-CFG-GEOFENCE</b> <b>Geofencing configuration</b>
----------------	--

<b>Type</b>	Get/set
-------------	---------

**Comment** This message is deprecated in protocol versions greater than 23.01. Use [UBX-CFG-VALSET](#), [UBX-CFG-VALGET](#), [UBX-CFG-VALDEL](#) instead.

See the [Legacy UBX Message Fields Reference](#) for the corresponding configuration item.

Gets or sets the geofencing configuration.

If the receiver is sent a valid new configuration, it will respond with a [UBX-ACK-ACK](#) message and immediately change to the new configuration. Otherwise the receiver will reject the request, by issuing a [UBX-ACK-NAK](#) and continuing operation with the previous configuration.

Note that the acknowledge message does not indicate whether the PIO configuration has been successfully applied (pin assigned), it only indicates the successful configuration of the feature. The configured PIO must be previously unoccupied for successful assignment.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x69	8 + numFences·12	see below	CK_A CK_B

*Payload description:*

Byte offset	Type	Name	Scale	Unit	Description
0	U1	version	-	-	Message version (0x00 for this version)
1	U1	numFences	-	-	Number of geofences contained in this message. Note that the receiver can only store a limited number of geofences (currently 4).
2	U1	confLvl	-	-	Required confidence level for state evaluation. This value times the position's standard deviation (sigma) defines the confidence band. <ul style="list-style-type: none"> <li>• 0 = no confidence required</li> <li>• 1 = 68%</li> <li>• 2 = 95%</li> <li>• 3 = 99.7%</li> <li>• 4 = 99.99%</li> </ul>
3	U1	reserved0	-	-	<a href="#">Reserved</a>
4	U1	pioEnabled	-	-	1 = Enable PIO combined fence state output, 0 = disable
5	U1	pinPolarity	-	-	PIO pin polarity. 0 = Low means inside, 1 = Low means outside. Unknown state is always high.
6	U1	pin	-	-	PIO pin number
7	U1	reserved1	-	-	<a href="#">Reserved</a>

*Start of repeated group (numFences times)*

8 + n·12	I4	lat	1e-7	deg	Latitude of the geofence circle center
12 + n·12	I4	lon	1e-7	deg	Longitude of the geofence circle center
16 + n·12	U4	radius	1e-2	m	Radius of the geofence circle

*End of repeated group (numFences times)*

### 3.10.5 UBX-CFG-GNSS (0x06 0x3e)

### 3.10.5.1 GNSS system configuration

<b>Message</b>	<b>UBX-CFG-GNSS</b>					
	<b>GNSS system configuration</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p> <p>Gets or sets the GNSS system channel sharing configuration.</p> <p>If the receiver is sent a valid new configuration, it will respond with a <a href="#">UBX-ACK-ACK</a> message and immediately change to the new configuration. Otherwise the receiver will reject the request, by issuing a <a href="#">UBX-ACK-NAK</a> and continuing operation with the previous configuration.</p> <p>Configuration requirements:</p> <ul style="list-style-type: none"> <li>It is necessary for at least one major GNSS to be enabled, after applying the new configuration to the current one.</li> <li>It is also required that at least 4 tracking channels are available to each enabled major GNSS, i.e. <code>maxTrkCh</code> must have a minimum value of 4 for each enabled major GNSS.</li> <li>The number of tracking channels in use must not exceed the number of tracking channels available in hardware, and the sum of all reserved tracking channels needs to be less than or equal to the number of tracking channels in use.</li> </ul> <p>Notes:</p> <ul style="list-style-type: none"> <li>To avoid cross-correlation issues, it is recommended that GPS and QZSS are always both enabled or both disabled.</li> <li>Polling this message returns the configuration of all supported GNSS, whether enabled or not; it may also include GNSS unsupported by the particular product, but in such cases the enable flag will always be unset.</li> <li>See section <a href="#">Satellite Numbering</a> for a description of the GNSS IDs available.</li> <li>Configuration specific to the GNSS system can be done via other messages (e.g. <a href="#">UBX-CFG-SBAS</a>).</li> </ul>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x3e	4 + numConfigBlocks*8	see below	CK_A CK_B

<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
<i>Start of repeated group (N times)</i>						
0 + n·10	U1	protocolID	-	-	Protocol identifier, identifying for which protocol the configuration is set/get. The following are valid protocol identifiers: <ul style="list-style-type: none"> <li>0: UBX protocol</li> <li>1: NMEA protocol</li> <li>2-255: Reserved</li> </ul>	
1 + n·10	U1[3]	reserved0	-	-	Reserved	
4 + n·10	X1[6]	infMsgMask	-	-	A bit mask, saying which information messages are enabled on each I/O port	
bit 0	U:1	ERROR	-	-	enable ERROR	
bit 1	U:1	WARNING	-	-	enable WARNING	
bit 2	U:1	NOTICE	-	-	enable NOTICE	
bit 3	U:1	TEST	-	-	enable TEST	
bit 4	U:1	DEBUG	-	-	enable DEBUG	
<i>End of repeated group (N times)</i>						

### 3.10.7 UBX-CFG-ITFM (0x06 0x39)

#### 3.10.7.1 Jamming/interference monitor configuration

<b>Message</b>	<b>UBX-CFG-ITFM</b>					
	<b>Jamming/interference monitor configuration</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x39	8	see below	CK_A CK_B
<i>Payload description:</i>						

Byte offset	Type	Name	Scale	Unit	Description
0	X4	config	-	-	Interference config word
bits 3...0	U:4	bbThreshold	-	-	Broadband jamming detection threshold
bits 8...4	U:5	cwThreshold	-	-	CW jamming detection threshold
bits 30...9	U:22	algorithmBits	-	-	Reserved algorithm settings - should be set to 0x16B156 in hex for correct settings
bit 31	U:1	enable	-	-	Enable interference detection
4	X4	config2	-	-	Extra settings for jamming/interference monitor
bits 11...0	U:12	generalBits	-	-	General settings - should be set to 0x31E in hex for correct setting
bits 13...12	U:2	antSetting	-	-	Antenna setting, 0=unknown, 1=passive, 2=active
bit 14	U:1	enable2	-	-	Set to 1 to scan auxiliary bands (u-blox 8 / u-blox M8 only, otherwise ignored)

### 3.10.8 UBX-CFG-LOGFILTER (0x06 0x47)

#### 3.10.8.1 Data logger configuration

Message	UBX-CFG-LOGFILTER Data logger configuration					
Type	Get/set					
Comment	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p> <p>This message can be used to configure the data logger, i.e. to enable/disable the log recording and to get/set the position entry filter settings.</p> <p>Position entries can be filtered based on time difference, position difference or current speed thresholds. Position and speed filtering also have a minimum time interval. A position is logged if any of the thresholds are exceeded. If a threshold is set to zero it is ignored. The maximum rate of position logging is 1 Hz.</p> <p>The filter settings will be configured to the provided values only if the 'applyAllFilterSettings' flag is set. This allows the recording to be enabled/disabled independently of configuring the filter settings.</p> <p>Configuring the data logger in the absence of a logging file is supported. By doing so, once the logging file is created, the data logger configuration will take effect immediately and logging recording and filtering will activate according to the configuration.</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x47	12	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	version	-	-	Message version (0x01 for this version)
1	X1	flags	-	-	Flags
bit 0	U:1	recordEnabled	-	-	1 = enable recording, 0 = disable recording
bit 1	U:1	psmOncePerWakeupEnabled	-	-	1 = enable recording only one single position per PSM on/off mode wake-up period, 0 = disable once per wake-up
bit 2	U:1	applyAllFilterSettings	-	-	1 = apply all filter settings, 0 = only apply recordEnabled

2	U2	minInterval	-	s	Minimum time interval between logged positions (0 = not set). <b>This is only applied in combination with the speed and/or position thresholds.</b> If both minInterval and timeThreshold are set, minInterval must be less than or equal to timeThreshold.
4	U2	timeThreshold	-	s	If the time difference is greater than the threshold, then the position is logged (0 = not set).
6	U2	speedThreshold	-	m/s	If the current speed is greater than the threshold, then the position is logged (0 = not set). minInterval also applies.
8	U4	position Threshold	-	m	If the 3D position difference is greater than the threshold, then the position is logged (0 = not set). minInterval also applies.

### 3.10.9 UBX-CFG-MSG (0x06 0x01)

28	U1[2]	reserved6	-	-	Reserved
30	U2	aopOrbMaxErr	-	m	Maximum acceptable (modeled) AssistNow Autonomous orbit error (valid range = 5..1000, or 0 = reset to firmware default)
32	U1[4]	reserved7	-	-	Reserved
36	U1[3]	reserved8	-	-	Reserved
39	U1	useAdr	-	-	Only supported on certain products

### 3.10.12 UBX-CFG-NMEA (0x06 0x17)

#### 3.10.12.1 Extended NMEA protocol configuration V1

<b>Message</b>	<b>UBX-CFG-NMEA</b>					
	<b>Extended NMEA protocol configuration V1</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>Get/set the <a href="#">NMEA protocol</a> configuration. See section <a href="#">NMEA Protocol Configuration</a> for a detailed description of the configuration effects on NMEA output.</p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x17	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	X1	filter	-	-	filter flags	
	bit 0 U <sub>:1</sub>	posFilt	-	-	Enable position output for failed or invalid fixes	
	bit 1 U <sub>:1</sub>	mskPosFilt	-	-	Enable position output for invalid fixes	
	bit 2 U <sub>:1</sub>	timeFilt	-	-	Enable time output for invalid times	
	bit 3 U <sub>:1</sub>	dateFilt	-	-	Enable date output for invalid dates	
	bit 4 U <sub>:1</sub>	gpsOnlyFilter	-	-	Restrict output to GPS satellites only	
	bit 5 U <sub>:1</sub>	trackFilt	-	-	Enable COG output even if COG is frozen	
1	U1	nmeaVersion	-	-	<ul style="list-style-type: none"> <li>0x4b = NMEA version 4.11 (not available in all products)</li> <li>0x41 = NMEA version 4.10 (not available in all products)</li> <li>0x40 = NMEA version 4.0 (not available in all products)</li> <li>0x23 = NMEA version 2.3</li> <li>0x21 = NMEA version 2.1</li> </ul>	

2	U1	numSV	-	-	Maximum number of SVs to report per TalkerId. <ul style="list-style-type: none"> <li>• 0 = unlimited</li> <li>• 8 = 8 SVs</li> <li>• 12 = 12 SVs</li> <li>• 16 = 16 SVs</li> </ul>	
3	X1	flags	-	-	flags	
	bit 0	U:1	compat	-	-	enable compatibility mode. This might be needed for certain applications when customer's NMEA parser expects a fixed number of digits in position coordinates.
	bit 1	U:1	consider	-	-	enable considering mode.
	bit 2	U:1	limit82	-	-	enable strict limit to 82 characters maximum.
	bit 3	U:1	highPrec	-	-	enable high precision mode. This flag cannot be set in conjunction with either compatibility mode or Limit82 mode (not supported for protocol versions less than 20.01).
4	X4	gnssToFilter	-	-	Filters out satellites based on their GNSS. If a bitfield is enabled, the corresponding satellites will be not output.	
	bit 0	U:1	gps	-	-	Disable reporting of GPS satellites
	bit 1	U:1	sbas	-	-	Disable reporting of SBAS satellites
	bit 2	U:1	galileo	-	-	Disable reporting of Galileo satellites
	bit 4	U:1	qzss	-	-	Disable reporting of QZSS satellites
	bit 5	U:1	glonass	-	-	Disable reporting of GLONASS satellites
	bit 6	U:1	beidou	-	-	Disable reporting of BeiDou satellites
8	U1	svNumbering	-	-	Configures the display of satellites that do not have an NMEA-defined value. Note: this does not apply to satellites with an unknown ID. <ul style="list-style-type: none"> <li>• 0 = Strict - Satellites are not output</li> <li>• 1 = Extended - Use proprietary numbering (see <a href="#">Satellite Numbering</a>)</li> </ul>	
9	U1	mainTalkerId	-	-	By default the main Talker ID (i.e. the Talker ID used for all messages other than GSV) is determined by the GNSS assignment of the receiver's channels (see <a href="#">UBX-CFG-GNSS</a> ). This field enables the main Talker ID to be overridden. <ul style="list-style-type: none"> <li>• 0 = Main Talker ID is not overridden</li> <li>• 1 = Set main Talker ID to 'GP'</li> <li>• 2 = Set main Talker ID to 'GL'</li> <li>• 3 = Set main Talker ID to 'GN'</li> <li>• 4 = Set main Talker ID to 'GA' (not supported for protocol versions less than 15.00)</li> <li>• 5 = Set main Talker ID to 'GB' (not supported for protocol versions less than 15.00)</li> <li>• 6 = Set main Talker ID to 'GQ' (available in NMEA 4.11 and later)</li> </ul>	
10	U1	gsvTalkerId	-	-	By default the Talker ID for GSV messages is GNSS-specific (as defined by NMEA). This field enables the GSV Talker ID to be overridden. <ul style="list-style-type: none"> <li>• 0 = Use GNSS-specific Talker ID (as defined by NMEA)</li> <li>• 1 = Use the main Talker ID</li> </ul>	

11	U1	version	-	-	Message version (0x01 for this version)
12	CH[2]	bdsTalkerId	-	-	Sets the two characters that should be used for the BeiDou Talker ID. If these are set to zero, then the default BeiDou Talker ID will be used.
14	U1[6]	reserved0	-	-	Reserved

### 3.10.13 UBX-CFG-ODO (0x06 0x1e)

#### 3.10.13.1 Odometer, low-speed COG engine settings

18	U1[2]	reserved3	-	-	Reserved	

### 3.10.14 UBX-CFG-PRT (0x06 0x00)

### 3.10.14.1 Polls the configuration for one I/O port

<b>Message</b>	<b>UBX-CFG-PRT</b>					
	<b>Polls the configuration for one I/O port</b>					
<b>Type</b>	Poll request					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p> <p>Sending this message with a port ID as payload results in having the receiver return the configuration for the specified port.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x00	1	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	portID	-	-	Port identifier number (see the other versions of CFG-PRT for valid values)	

### 3.10.14.2 Port configuration for UART ports

<b>Message</b>	<b>UBX-CFG-PRT</b>					
	<b>Port configuration for UART ports</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p> <p>Several configurations can be concatenated to one input message. In this case the payload length can be a multiple of the normal length (see the other versions of CFG-PRT). Output messages from the module contain only one configuration unit.</p> <p>Note that this message can affect baud rate and other transmission parameters. Because there may be messages queued for transmission there may be uncertainty about which protocol applies to such messages. In addition a message currently in transmission may be corrupted by a protocol change. Host data reception parameters may have to be changed to be able to receive future messages, including the acknowledge message resulting from the CFG-PRT message.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

### 3.10.16 UBX-CFG-RATE (0x06 0x08)

#### 3.10.16.1 Navigation/measurement rate settings

<b>Message</b>	<b>UBX-CFG-RATE</b>					
	<b>Navigation/measurement rate settings</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b></p> <p>See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.</p> <p>This message allows the user to alter the rate at which navigation solutions (and the measurements that they depend on) are generated by the receiver. The calculation of the navigation solution will always be aligned to the top of a second zero (first second of the week) of the configured reference time system.</p> <p>(Navigation period is an integer multiple of the measurement period for protocol versions greater than 17.00).</p> <ul style="list-style-type: none"> <li>• Each measurement triggers the measurements generation and, if available, raw data output.</li> <li>• The navRate value defines that every nth measurement triggers a navigation epoch.</li> <li>• The update rate has a direct influence on the power consumption. The more fixes that are required, the more CPU power and communication resources are required.</li> <li>• For most applications a 1 Hz update rate would be sufficient.</li> <li>• When using power save mode, measurement and navigation rate can differ from the values configured here.</li> </ul>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x06	0x08	6	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U2	measRate	-	ms	The elapsed time between GNSS measurements, which defines the rate, e.g. 100 ms => 10 Hz, 1000 ms => 1 Hz, 10000 ms => 0.1 Hz. Measurement rate should be greater than or equal to 25 ms. (Measurement rate should be greater than or equal to 50 ms for protocol versions less than 24.00).	
2	U2	navRate	-	cycles	The ratio between the number of measurements and the number of navigation solutions, e.g. 5 means five measurements for every navigation solution. Maximum value is 127. (This parameter is ignored and the navRate is fixed to 1 for protocol versions less than 18.00).	
4	U2	timeRef	-	-	The time system to which measurements are aligned: <ul style="list-style-type: none"> <li>• 0 = UTC time</li> <li>• 1 = GPS time</li> <li>• 2 = GLONASS time (not supported for protocol versions less than 18.00)</li> <li>• 3 = BeiDou time (not supported for protocol versions less than 18.00)</li> <li>• 4 = Galileo time (not supported for protocol versions less than 18.00)</li> </ul>	

### 3.10.17 UBX-CFG-RINV (0x06 0x34)

### 3.10.17.1 Contents of remote inventory

<b>Message</b>	<b>UBX-CFG-RINV</b>					
	<b>Contents of remote inventory</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<p><b>This message is deprecated in protocol versions greater than 23.01. 1	U1	reserved0	-	-	<a href="#">Reserved</a>	
2	X2	flags	-	-	Time mode flags	
	bit 0 U:1	lla	-	-	Position is given in LAT/LON/ALT (default is ECEF)	
	bit 1 U:1	altInv	-	-	Altitude is not valid, in case lla was set	
4	I4	ecefXOrLat	-	cm_or_deg*1e-7	WGS84 ECEF X coordinate or latitude, depending on flags above	
8	I4	ecefYOrLon	-	cm_or_deg*1e-7	WGS84 ECEF Y coordinate or longitude, depending on flags above	
12	I4	ecefZOrAlt	-	cm	WGS84 ECEF Z coordinate or altitude, depending on flags above	
16	U4	fixedPosAcc	-	mm	Fixed position 3D accuracy	
20	U4	svinMinDur	-	s	Survey-in minimum duration	
24	U4	svinAccLimit	-	mm	Survey-in position accuracy limit	

### 3.10.21 UBX-CFG-TP5 (0x06 0x31)

#### 3.10.21.1 Time pulse parameters

<b>Message</b>	<b>UBX-CFG-TP5</b>					
	<b>Time pulse parameters</b>					
<b>Type</b>	Get/set					
<b>Comment</b>	<b>This message is deprecated in protocol versions greater than 27. Use <a href="#">UBX-CFG-VALSET</a>, <a href="#">UBX-CFG-VALGET</a>, <a href="#">UBX-CFG-VALDEL</a> instead.</b> See the <a href="#">Legacy UBX Message Fields Reference</a> for the corresponding configuration item.					

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x06	0x31	32	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	tpIdx	-	-	Time pulse selection (0 = TIMEPULSE, 1 = TIMEPULSE2)	
1	U1	version	-	-	Message version (0x01 for this version)	
2	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
4	I2	antCableDelay	-	ns	Antenna cable delay	
6	I2	rfGroupDelay	-	ns	RF group delay	
8	U4	freqPeriod	-	Hz_or_us	Frequency or period time, depending on setting of bit 'isFreq'	
12	U4	freqPeriodLock	-	Hz_or_us	Frequency or period time when locked to GNSS time, only used if 'lockedOtherSet' is set	
16	U4	pulseLenRatio	-	us_or_2 <sup>-32</sup>	Pulse length or duty cycle, depending on 'isLength'	
20	U4	pulseLenRatioLock	-	us_or_2 <sup>-32</sup>	Pulse length or duty cycle when locked to GNSS time, only used if 'lockedOtherSet' is set	
24	I4	userConfigDelay	-	ns	User-configurable time pulse delay	
28	X4	flags	-	-	Configuration flags	
bit 0	U:1	active	-	-	If set enable time pulse; if pin assigned to another function, other function takes precedence. Must be set for FTS variant.	
bit 1	U:1	lockGnssFreq	-	-	If set, synchronize time pulse to GNSS as soon as GNSS time is valid. If not set, or before GNSS time is valid, use local clock.  This flag is ignored by the FTS product variant; in this case the receiver always locks to the best available time/frequency reference (which is not necessarily GNSS).  This flag can be unset only in Timing product variants.	
bit 2	U:1	lockedOtherSet	-	-	If set the receiver switches between the timepulse settings given by 'freqPeriodLocked' & 'pulseLenLocked' and those given by 'freqPeriod' & 'pulseLen'. The 'Locked' settings are used where the receiver has an accurate sense of time. For non-FTS products, this occurs when GNSS solution with a reliable time is available, but for FTS products the setting syncMode field governs behavior. In all cases, the receiver only uses 'freqPeriod' & 'pulseLen' when the flag is unset.	
bit 3	U:1	isFreq	-	-	If set 'freqPeriodLock' and 'freqPeriod' are interpreted as frequency, otherwise interpreted as period.	
bit 4	U:1	isLength	-	-	If set 'pulseLenRatioLock' and 'pulseLenRatio' interpreted as pulse length, otherwise interpreted as duty cycle.	
bit 5	U:1	alignToTow	-	-	Align pulse to top of second (period time must be integer fraction of 1s). Also set 'lockGnssFreq' to use this feature.  This flag is ignored by the FTS product variant; it is assumed to be always set (as is lockGnssFreq). Set	

					maxSlewRate and maxPhaseCorrRate fields of <b>UBX-CFG-SMGR</b> to 0 to disable alignment.
bit 6	U:1	polarity	-	-	Pulse polarity: <ul style="list-style-type: none"> <li>0 = falling edge at top of second</li> <li>1 = rising edge at top of second</li> </ul>
bits 10...7	U:4	gridUtcGnss	-	-	Timegrid to use: <ul style="list-style-type: none"> <li>0 = UTC</li> <li>1 = GPS</li> <li>2 = GLONASS</li> <li>3 = BeiDou</li> <li>4 = Galileo (not supported for protocol versions less than 18.00)</li> </ul> This flag is only relevant if 'lockGnssFreq' and 'alignToTow' are set. Note that configured GNSS time is estimated by the receiver if locked to any GNSS system. If the receiver has a valid GNSS fix it will attempt to steer the TP to the specified time grid even if the specified time is not based on information from the constellation's satellites. To ensure timing based purely on a given GNSS, restrict the supported constellations in <a href="#">UBX-CFG-GNSS</a> .
bits 13...11	U:3	syncMode	-	-	Sync Manager lock mode to use: <ul style="list-style-type: none"> <li>0 = switch to 'freqPeriodLock' and 'pulseLenRatioLock' as soon as Sync Manager has an accurate time, never switch back to 'freqPeriod' and 'pulseLenRatio'</li> <li>1 = switch to 'freqPeriodLock' and 'pulseLenRatioLock' as soon as Sync Manager has an accurate time, and switch back to 'freqPeriod' and 'pulseLenRatio' as soon as time gets inaccurate</li> </ul> This field is only relevant for the FTS product variant. This field is only relevant if the flag 'lockedOtherSet' is set.

### 3.10.22 UBX-CFG-USB (0x06 0x1b)

### 3.10.24 UBX-CFG-VALGET (0x06 0x8b)

#### 3.10.24.1 Get configuration items

<b>Message</b>	<b>UBX-CFG-VALGET</b> <b>Get configuration items</b>					
<b>Type</b>	Poll request					
<b>Comment</b>	<p>Overview:</p> <ul style="list-style-type: none"> <li>• This message is used to get configuration values by providing a list of configuration key IDs, which identify the configuration items to retrieve.</li> <li>• This message can specify the configuration layer where the values of the specified configuration items are retrieved from.</li> <li>• This message is limited to containing a maximum of 64 key IDs.</li> <li>• See <a href="#">Receiver configuration</a> for details.</li> </ul> <p>This message returns a UBX-ACK-NAK:</p> <ul style="list-style-type: none"> <li>• if any key is unknown to the receiver FW</li> <li>• if the layer field specifies an invalid layer to get the value from</li> <li>• if the keys array specifies more than 64 key IDs.</li> </ul> <p>Notes:</p> <ul style="list-style-type: none"> <li>• If a value is requested multiple times within the same poll request, then the reply will contain it multiple times.</li> <li>• The provided keys can be complete key values (group and item specifiers) or wild-card specifications. A complete key value will constitute a request for one key-value pair. A key value that has a valid group specifier and 0xffff in the item part of the key value (bits 0-15) constitutes a request for all items in the specified group. A key with a value of 0xffff in the group part of the key value (bits 16-27) is a request for all items known to the receiver in all groups.</li> <li>• The response message is limited to containing a maximum of 64 key-value pairs. If there are wild-card specifications then there may be more than 64 possible responses. In order to handle this, the 'position' field can specify that the response message should skip this number of key-value pairs before it starts constructing the message. This allows a large set of values to be retrieved 64 at a time. If the response contains less than 64 key-value pairs then all values have been reported, otherwise there may be more to read.</li> <li>• It is not possible to retrieve configuration values for the same configuration item from multiple configuration layers. Separate poll requests must be made for each desired layer.</li> </ul>

<i>End of repeated group (N times)</i>						

### 3.10.25 UBX-CFG-VALSET (0x06 0x8a)

#### 3.10.25.1 Set configuration item values

<b>Message</b>	<b>UBX-CFG-VALSET</b>				
	<b>Set configuration item values</b>				
<b>Type</b>	Set				
<b>Comment</b>	Overview: <ul style="list-style-type: none"> <li>• This message is used to set a configuration by providing configuration data (a list of key and value pairs), which identify the configuration items to change, and their new values.</li> <li>• This message is limited to containing a maximum of 64 key-value pairs.</li> <li>• This message can be used multiple times and every time the result will be applied immediately. To send this message multiple times with the result being applied at the end, see version 1 of <a href="#">UBX-CFG-VALSET</a> that supports transactions.</li> <li>• See <a href="#">Receiver configuration</a> for details.</li> </ul>				

This message returns a UBX-ACK-NAK and no configuration is applied:

- if any key is unknown to the receiver FW
- if the layer's bitfield does not specify a layer to save a value to
- if the requested configuration is not valid. The validity of a configuration is checked only if the message requests to apply the configuration to the RAM configuration layer.

Notes:

- If a key is sent multiple times within the same message, then the value eventually being applied is the last sent.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum

## 3.11 UBX-INF (0x04)

Messages in the UBX-INF class are used to output strings from the firmware or application code. All messages have an associated type to indicate the nature or priority of the message.

### 3.11.1 UBX-INF-DEBUG (0x04 0x04)

#### 3.11.1.1 ASCII output with debug contents

Message	UBX-INF-DEBUG					
Type	ASCII output with debug contents					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class ID	Length (Bytes)	Payload	Checksum	
	0xb5 0x62	0x04	0x04	[0..n]	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
<i>Start of repeated group (N times)</i>						

0 + n	CH	str	-	-	ASCII Character
-------	----	-----	---	---	-----------------

End of repeated group (N times)

### 3.11.2 UBX-INF-ERROR (0x04 0x00)

#### 3.11.2.1 ASCII output with error contents

<b>Message</b>	<b>UBX-INF-ERROR</b>					
	<b>ASCII output with error contents</b>					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x04	0x00	[0..n]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
Start of repeated group (N times)						
0 + n	CH	str	-	-	ASCII Character	
End of repeated group (N times)						

### 3.11.3 UBX-INF-NOTICE (0x04 0x02)

#### 3.11.3.1 ASCII output with informational contents

<b>Message</b>	<b>UBX-INF-NOTICE</b>					
	<b>ASCII output with informational contents</b>					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x04	0x02	[0..n]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
Start of repeated group (N times)						
0 + n	CH	str	-	-	ASCII Character	
End of repeated group (N times)						

### 3.11.4 UBX-INF-TEST (0x04 0x03)

#### 3.11.4.1 ASCII output with test contents

<b>Message</b>	<b>UBX-INF-TEST</b>					
	<b>ASCII output with test contents</b>					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x04	0x03	[0..n]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
Start of repeated group (N times)						

0 + n	CH	str	-	-	ASCII Character
-------	----	-----	---	---	-----------------

End of repeated group (N times)

### 3.11.5 UBX-INF-WARNING (0x04 0x01)

#### 3.11.5.1 ASCII output with warning contents

<b>Message</b>	<b>UBX-INF-WARNING</b>					
	<b>ASCII output with warning contents</b>					
Type	Output					
Comment	This message has a variable length payload, representing an ASCII string.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x04	0x01	[0..n]	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
Start of repeated group (N times)						
0 + n	CH	str	-	-	ASCII Character	
End of repeated group (N times)						

## 3.12 UBX-LOG (0x21)

The messages in the UBX-LOG class are used to configure and report status information of the logging and data batching features.

### 3.12.1 UBX-LOG-CREATE (0x21 0x07)

#### 3.12.1.1 Create log file

<b>Message</b>	<b>UBX-LOG-CREATE</b>					
	<b>Create log file</b>					
Type	Command					
Comment	This message is used to create an initial logging file and activate the logging subsystem. <a href="#">UBX-ACK-ACK</a> or <a href="#">UBX-ACK-NAK</a> are returned to indicate success or failure. This message does not handle activation of recording or filtering of log entries (see <a href="#">UBX-CFG-LOGFILTER</a> ).					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x07	8	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	X1	logCfg	-	-	Config flags	
	bit 0	U:1	circular	-	-	Log is circular (new entries overwrite old ones in a full log) if this bit set
2	U1	reserved0	-	-	<a href="#">Reserved</a>	
3	U1	logSize	-	-	Indicates the size of the log: <ul style="list-style-type: none"> <li>0 (maximum safe size) = Ensures that logging will not be interrupted and enough space will be left available for all other uses of the filestore</li> <li>1 (minimum size) =</li> <li>2 (user-defined) = See 'userDefinedSize' below</li> </ul>	

4	U4	userDefined Size	-	bytes	Sets the maximum amount of space in the filestore that can be used by the logging task.  This field is only applicable if logSize is set to user-defined.
---	----	---------------------	---	-------	---

### 3.12.2 UBX-LOG-ERASE (0x21 0x03)

#### 3.12.2.1 Erase logged data

<b>Message</b>	<b>UBX-LOG-ERASE</b> <b>Erase logged data</b>					
Type	Command					
Comment	This message deactivates the logging system and erases all logged data. <a href="#">UBX-ACK-ACK</a> or <a href="#">UBX-ACK-NAK</a> are returned to indicate success or failure.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x03	0	see below	CK_A CK_B
Payload	This message has no payload.					

### 3.12.3 UBX-LOG-FINDTIME (0x21 0x0e)

#### 3.12.3.1 Find index of a log entry based on a given time

<b>Message</b>	<b>UBX-LOG-FINDTIME</b> <b>Find index of a log entry based on a given time</b>					
Type	Input					
Comment	This message can be used for a time-based search of a log. It can find the index of the first log entry with time equal to the given time, otherwise the index of the most recent entry with time less than the given time. This index can then be used with the <a href="#">UBX-LOG-RETRIEVE</a> message to provide time-based retrieval of log entries. Searching a log is effective for a given time later than the base date (January 1st, 2004). Searching a log for a given time earlier than the base date will result in an 'entry not found' response. (Searching a log for a given time earlier than the base date will result in a <a href="#">UBX-ACK-NAK</a> message for protocol versions less than 18.00). Searching a log for a given time greater than the last recorded entry's time will return the index of the last recorded entry. (If the logging has stopped due to lack of file space, such a search will result in a <a href="#">UBX-ACK-NAK</a> message for protocol versions less than 18.00).					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x0e	12	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	type	-	-	Message type, 0 for request	
2	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
4	U2	year	-	-	Year (1-65635) of UTC time	
6	U1	month	-	-	Month (1-12) of UTC time	
7	U1	day	-	-	Day (1-31) of UTC time	
8	U1	hour	-	-	Hour (0-23) of UTC time	
9	U1	minute	-	-	Minute (0-59) of UTC time	
10	U1	second	-	-	Second (0-60) of UTC time	
11	U1	reserved1	-	-	<a href="#">Reserved</a>	

### 3.12.3.2 Response to FINDTIME request

<b>Message</b>	<b>UBX-LOG-FINDTIME</b>					
	<b>Response to FINDTIME request</b>					
Type	Output					
Comment						
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x21	0x0e	8	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x01 for this version)	
1	U1	type	-	-	Message type, 1 for response	
2	U1[2]	reserved0	-	-	Reserved	
4	U4	entryNumber	-	-	Index of the first log entry with time = given time, otherwise index of the most recent entry with time < given time. If 0xFFFFFFFF, no log entry found with time <= given time. The indexing of log entries is zero-based.	

### 3.12.4 UBX-LOG-INFO (0x21 0x08)

#### 3.12.4.1 Poll for log information

<b>Message</b>	<b>UBX-LOG-INFO</b>					
	<b>Poll for log information</b>					
Type	Poll request					
Comment	Upon sending of this message, the receiver returns UBX-LOG-INFO as defined below.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x21	0x08	0	see below	CK_A CK_B
<b>Payload</b>	This message has no payload.					

#### 3.12.4.2 Log information

<b>Message</b>	<b>UBX-LOG-INFO</b>					
	<b>Log information</b>					
Type	Output					
Comment	This message is used to report information about the logging subsystem.					
	Note:					
	<ul style="list-style-type: none"> <li>The reported maximum log size will be smaller than that originally specified in LOG-CREATE due to logging and filestore implementation overheads.</li> <li>Log entries are compressed in a variable length fashion, so it may be difficult to predict log space usage with any precision.</li> <li>There may be times when the receiver does not have an accurate time (e.g. if the week number is not yet known), in which case some entries will not have a timestamp. This may result in the oldest/newest entry time values not taking account of these entries.</li> </ul>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x21	0x08	48	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x01 for this version)	
1	U1[3]	reserved0	-	-	Reserved	

4	U4	filestore Capacity	-	bytes	The capacity of the filestore	
8	U1[8]	reserved1	-	-	Reserved	
16	U4	currentMaxLog Size	-	bytes	The maximum size the current log is allowed to grow to	
20	U4	currentLogSize	-	bytes	Approximate amount of space in log currently occupied	
24	U4	entryCount	-	-	Number of entries in the log. Note: for circular logs this value will decrease when a group of entries is deleted to make space for new ones.	
28	U2	oldestYear	-	-	Oldest entry UTC year (1-65635) or zero if there are no entries with known time	
30	U1	oldestMonth	-	-	Oldest month (1-12)	
31	U1	oldestDay	-	-	Oldest day (1-31)	
32	U1	oldestHour	-	-	Oldest hour (0-23)	
33	U1	oldestMinute	-	-	Oldest minute (0-59)	
34	U1	oldestSecond	-	-	Oldest second (0-60)	
35	U1	reserved2	-	-	Reserved	
36	U2	newestYear	-	-	Newest year (1-65635) or zero if there are no entries with known time	
38	U1	newestMonth	-	-	Newest month (1-12)	
39	U1	newestDay	-	-	Newest day (1-31)	
40	U1	newestHour	-	-	Newest hour (0-23)	
41	U1	newestMinute	-	-	Newest minute (0-59)	
42	U1	newestSecond	-	-	Newest second (0-60)	
43	U1	reserved3	-	-	Reserved	
44	X1	status	-	-	Log status flags	
	bit 3	U <sub>1</sub>	recording	-	-	Log entry recording is currently turned on
	bit 4	U <sub>1</sub>	inactive	-	-	Logging system not active - no log present
	bit 5	U <sub>1</sub>	circular	-	-	The current log is circular
45	U1[3]	reserved4	-	-	Reserved	

### 3.12.5 UBX-LOG-RETRIEVE (0x21 0x09)

#### 3.12.5.1 Request log data

<b>Message</b>	<b>UBX-LOG-RETRIEVE</b> <b>Request log data</b>
<b>Type</b>	Command
<b>Comment</b>	This message is used to request logged data (log recording must first be disabled, see <a href="#">UBX-CFG-LOGFILTER</a> ). Log entries are returned in chronological order, using the messages <a href="#">UBX-LOG-RETRIEVEPOS</a> and <a href="#">UBX-LOG-RETRIEVESTRING</a> . If the odometer was enabled at the time a position was logged, then message <a href="#">UBX-LOG-RETRIEVEPOSEXTRA</a> will also be used. The maximum number of entries that can be returned in response to a single UBX-LOG-RETRIEVE message is 256. If more entries than this are required the message will need to be sent multiple times with different startNumbers. The retrieve will be stopped if any UBX-LOG message is received. The speed of transfer can be maximized by using a high data rate and temporarily stopping the GPS processing (see <a href="#">UBX-CFG-RST</a> ).

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x09	12	see below	CK_A CK_B

*Payload description:*

Byte offset	Type	Name	Scale	Unit	Description
0	U4	startNumber	-	-	Index of first log entry to be transferred. If it is larger than the index of the last available log entry, then the first log entry to be transferred is the last available log entry. The indexing of log entries is zero-based.
4	U4	entryCount	-	-	Number of log entries to transfer in total including the first entry to be transferred. If it is larger than the log entries available starting from the first entry to be transferred, then only the available log entries are transferred followed by a <a href="#">UBX-ACK-NAK</a> . The maximum is 256.
8	U1	version	-	-	Message version (0x00 for this version)
9	U1[3]	reserved0	-	-	<a href="#">Reserved</a>

### 3.12.6 UBX-LOG-RETRIEVEPOS (0x21 0x0b)

#### 3.12.6.1 Position fix log entry

Message	UBX-LOG-RETRIEVEPOS Position fix log entry					
Type	Output					
Comment	This message is used to report a position fix log entry					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x0b	40	see below	CK_A CK_B

*Payload description:*

Byte offset	Type	Name	Scale	Unit	Description
0	U4	entryIndex	-	-	The index of this log entry
4	I4	lon	1e-7	deg	Longitude
8	I4	lat	1e-7	deg	Latitude
12	I4	hMSL	-	mm	Height above mean sea level
16	U4	hAcc	-	mm	Horizontal accuracy estimate
20	U4	gSpeed	-	mm/s	Ground speed (2-D)
24	U4	heading	1e-5	deg	Heading
28	U1	version	-	-	Message version (0x00 for this version)
29	U1	fixType	-	-	Fix type: <ul style="list-style-type: none"> <li>• 0x01 = Dead Reckoning only</li> <li>• 0x02 = 2D-Fix</li> <li>• 0x03 = 3D-Fix</li> <li>• 0x04 = GNSS + Dead Reckoning combined</li> </ul>
30	U2	year	-	-	Year (1-65635) of UTC time
32	U1	month	-	-	Month (1-12) of UTC time
33	U1	day	-	-	Day (1-31) of UTC time
34	U1	hour	-	-	Hour (0-23) of UTC time
35	U1	minute	-	-	Minute (0-59) of UTC time
36	U1	second	-	-	Second (0-60) of UTC time

37	U1	reserved0	-	-	Reserved
38	U1	numSV	-	-	Number of satellites used in the position fix
39	U1	reserved1	-	-	Reserved

### 3.12.7 UBX-LOG-RETRIEVEPOSEXTRA (0x21 0x0f)

#### 3.12.7.1 Odometer log entry

<b>Message</b>	<b>UBX-LOG-RETRIEVEPOSEXTRA</b>					
	<b>Odometer log entry</b>					
Type	Output					
Comment	This message is used to report an odometer log entry					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x0f	32	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	entryIndex	-	-	The index of this log entry	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	reserved0	-	-	Reserved	
6	U2	year	-	-	Year (1-65635) of UTC time. Will be zero if time not known	
8	U1	month	-	-	Month (1-12) of UTC time	
9	U1	day	-	-	Day (1-31) of UTC time	
10	U1	hour	-	-	Hour (0-23) of UTC time	
11	U1	minute	-	-	Minute (0-59) of UTC time	
12	U1	second	-	-	Second (0-60) of UTC time	
13	U1[3]	reserved1	-	-	Reserved	
16	U4	distance	-	-	Odometer distance traveled since the last time the odometer was reset by a <a href="#">UBX-NAV-RESETO</a>	
20	U1[12]	reserved2	-	-	Reserved	

### 3.12.8 UBX-LOG-RETRIEVESTRING (0x21 0x0d)

#### 3.12.8.1 Byte string log entry

<b>Message</b>	<b>UBX-LOG-RETRIEVESTRING</b>					
	<b>Byte string log entry</b>					
Type	Output					
Comment	This message is used to report a byte string log entry					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x0d	16 + byteCount	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	entryIndex	-	-	The index of this log entry	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	reserved0	-	-	Reserved	

6	U2	year	-	-	Year (1-65635) of UTC time. Will be zero if time not known
8	U1	month	-	-	Month (1-12) of UTC time
9	U1	day	-	-	Day (1-31) of UTC time
10	U1	hour	-	-	Hour (0-23) of UTC time
11	U1	minute	-	-	Minute (0-59) of UTC time
12	U1	second	-	-	Second (0-60) of UTC time
13	U1	reserved1	-	-	<a href="#">Reserved</a>
14	U2	byteCount	-	-	Size of string in bytes
<i>Start of repeated group (byteCount times)</i>					
16 + n	U1	bytes	-	-	The bytes of the string
<i>End of repeated group (byteCount times)</i>					

### 3.12.9 UBX-LOG-STRING (0x21 0x04)

#### 3.12.9.1 Store arbitrary string in on-board flash

<b>Message</b>	<b>UBX-LOG-STRING</b>					
	<b>Store arbitrary string in on-board flash</b>					
Type	Command					
Comment	This message can be used to store an arbitrary byte string in the on-board flash memory. The maximum length that can be stored is 256 bytes.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x21	0x04	[0..n]	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
<i>Start of repeated group (N times)</i>						
0 + n	U1	bytes	-	-	The string of bytes to be logged (maximum 256)	
<i>End of repeated group (N times)</i>						

### 3.13 UBX-MGA (0x13)

The messages in the UBX-MGA class are used for sending GNSS assistance (A-GNSS, aiding) information to the receiver as well as backing up the navigation database from the receiver to a host.

#### 3.13.1 UBX-MGA-ACK (0x13 0x60)

##### 3.13.1.1 Multiple GNSS acknowledge message

<b>Message</b>	<b>UBX-MGA-ACK-DATA0</b>					
	<b>Multiple GNSS acknowledge message</b>					
Type	Output					
Comment	This message is sent by a u-blox receiver to acknowledge the receipt of an assistance message. Acknowledgments are enabled by setting the <a href="#">CFG-NAVSPG-ACKAIDING</a> item. See the section Flow control in <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x60	8	see below	CK_A CK_B
<i>Payload description:</i>						

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Type of acknowledgment: <ul style="list-style-type: none"> <li>0 = The message was not used by the receiver (see infoCode field for an indication of why)</li> <li>1 = The message was accepted for use by the receiver (the infoCode field will be 0)</li> </ul>
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	infoCode	-	-	Provides greater information on what the receiver chose to do with the message contents: <ul style="list-style-type: none"> <li>0 = The receiver accepted the data</li> <li>1 = The receiver does not know the time so it cannot use the data (To resolve this a <a href="#">UBX-MGA-INI-TIME_UTC</a> message should be supplied first)</li> <li>2 = The message version is not supported by the receiver</li> <li>3 = The message size does not match the message version</li> <li>4 = The message data could not be stored to the database</li> <li>5 = The receiver is not ready to use the message data</li> <li>6 = The message type is unknown</li> </ul>
3	U1	msgId	-	-	UBX message ID of the acknowledged message
4	U1[4]	msgPayload Start	-	-	The first 4 bytes of the acknowledged message's payload

### 3.13.2 UBX-MGA-BDS (0x13 0x03)

#### 3.13.2.1 BeiDou ephemeris assistance

Message	UBX-MGA-BDS-EPH BeiDou ephemeris assistance					
Type	Input					
Comment	This message allows the delivery of BeiDou ephemeris assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x03	88	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x01 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1	svId	-	-	BeiDou satellite identifier (see <a href="#">Satellite Numbering</a> )	
3	U1	reserved0	-	-	<a href="#">Reserved</a>	
4	U1	SatH1	-	-	Autonomous satellite Health flag	
5	U1	IODC	-	-	Issue of Data, Clock	
6	I2	a2	2 <sup>-66</sup>	s/s <sup>2</sup>	Time polynomial coefficient 2	
8	I4	a1	2 <sup>-50</sup>	s/s	Time polynomial coefficient 1	
12	I4	a0	2 <sup>-33</sup>	s	Time polynomial coefficient 0	
16	U4	toc	2 <sup>3</sup>	s	Clock data reference time	
20	I2	TGD1	0.1	ns	Equipment Group Delay Differential	

22	U1	URAI	-	-	User Range Accuracy Index

24	U4	toe	2 <sup>^</sup> 3	s	Ephemeris reference time
28	U4	sqrtA	2 <sup>^</sup> -19	m <sup>^</sup> 0.5	Square root of semi-major axis
32	U4	e	2 <sup>^</sup> -33	-	Eccentricity
36	I4	omega	2 <sup>^</sup> -31	semi-circles	Argument of perigee
40	I2	Deltan	2 <sup>^</sup> -43	semi-circles/s	Mean motion difference from computed value
42	I2	IDOT	2 <sup>^</sup> -43	semi-circles/s	Rate of inclination angle
44	I4	M0	2 <sup>^</sup> -31	semi-circles	Mean anomaly at reference time
48	I4	Omega0	2 <sup>^</sup> -31	semi-circles	Longitude of ascending node of orbital of plane computed according to reference time
52	I4	OmegaDot	2 <sup>^</sup> -43	semi-circles/s	Rate of right ascension
56	I4	i0	2 <sup>^</sup> -31	semi-circles	Inclination angle at reference time
60	I4	Cuc	2 <sup>^</sup> -31	semi-circles	Amplitude of cosine harmonic correction term to the argument of latitude
64	I4	Cus	2 <sup>^</sup> -31	semi-circles	Amplitude of sine harmonic correction term to the argument of latitude
68	I4	Crc	2 <sup>^</sup> -6	m	Amplitude of cosine harmonic correction term to the orbit radius
72	I4	Crs	2 <sup>^</sup> -6	m	Amplitude of sine harmonic correction term to the orbit radius
76	I4	Cic	2 <sup>^</sup> -31	semi-circles	Amplitude of cosine harmonic correction term to the angle of inclination
80	I4	Cis	2 <sup>^</sup> -31	semi-circles	Amplitude of sine harmonic correction term to the angle of inclination
84	U1[4]	reserved1	-	-	Reserved

### 3.13.2.2 BeiDou almanac assistance

<b>Message</b>	<b>UBX-MGA-BDS-ALM</b> <b>BeiDou almanac assistance</b>					
<b>Type</b>	Input					
<b>Comment</b>	This message allows the delivery of BeiDou almanac assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x13	0x03	40	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	type	-	-	Message type (0x02 for this version)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1	svId	-	-	BeiDou satellite identifier (see <a href="#">Satellite Numbering</a> )	
3	U1	reserved0	-	-	Reserved	
4	U1	Wna	-	week	Almanac Week Number	

5	U1	toa	2 <sup>12</sup>	s	Almanac reference time
6	I2	deltaI	2 <sup>-19</sup>	semi-circles	Almanac correction of orbit reference inclination at reference time
8	U4	sqrtA	2 <sup>-11</sup>	m <sup>0.5</sup>	Almanac square root of semi-major axis
12	U4	e	2 <sup>-21</sup>	-	Almanac eccentricity
16	I4	omega	2 <sup>-23</sup>	semi-circles	Almanac argument of perigee
20	I4	M0	2 <sup>-23</sup>	semi-circles	Almanac mean anomaly at reference time
24	I4	Omega0	2 <sup>-23</sup>	semi-circles	Almanac longitude of ascending node of orbit plane at computed according to reference time
28	I4	omegaDot	2 <sup>-38</sup>	semi-circles/s	Almanac rate of right ascension
32	I2	a0	2 <sup>-20</sup>	s	Almanac satellite clock bias
34	I2	a1	2 <sup>-38</sup>	s/s	Almanac satellite clock rate
36	U1[4]	reserved1	-	-	Reserved

### 3.13.2.3 BeiDou health assistance

<b>Message</b>	<b>UBX-MGA-BDS-HEALTH</b> <b>BeiDou health assistance</b>					
Type	Input					
Comment	This message allows the delivery of BeiDou health assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x03	68	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x04 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1[2]	reserved0	-	-	Reserved	
4	U2[30]	healthCode	-	-	Each two-byte value represents a BeiDou SV (1-30). The 9 LSBs of each byte contain the 9 bit health code from subframe 5 pages 7,8 of the D1 message, and from subframe 5 pages 35,36 of the D1 message.	
64	U1[4]	reserved1	-	-	Reserved	

### 3.13.2.4 BeiDou UTC assistance

<b>Message</b>	<b>UBX-MGA-BDS-UTC</b> <b>BeiDou UTC assistance</b>					
Type	Input					
Comment	This message allows the delivery of BeiDou UTC assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x03	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x05 for this type)	

1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	<a href="#">Reserved</a>
4	I4	a0UTC	2 <sup>-30</sup>	s	BDT clock bias relative to UTC
8	I4	a1UTC	2 <sup>-50</sup>	s/s	BDT clock rate relative to UTC
12	I1	dtLS	-	s	Delta time due to leap seconds before the new leap second effective
13	U1	reserved1	-	-	<a href="#">Reserved</a>
14	U1	wnRec	-	week	BeiDou week number of reception of this UTC parameter set (8-bit truncated)
15	U1	wnLSF	-	week	Week number of the new leap second
16	U1	dN	-	day	Day number of the new leap second
17	I1	dtLSF	-	s	Delta time due to leap seconds after the new leap second effective
18	U1[2]	reserved2	-	-	<a href="#">Reserved</a>

### 3.13.2.5 BeiDou ionosphere assistance

<b>Message</b>	<b>UBX-MGA-BDS-IONO</b> <b>BeiDou ionosphere assistance</b>					
<b>Type</b>	Input					
<b>Comment</b>	This message allows the delivery of BeiDou ionospheric assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x13	0x03	16	<i>see below</i>	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>

12	U1[4]	reserved1	-	-	<a href="#">Reserved</a>	

### 3.13.3 UBX-MGA-DBD (0x13 0x80)

#### 3.13.3.1 Poll the navigation database

<b>Message</b>	<b>UBX-MGA-DBD</b> <b>Poll the navigation database</b>
<b>Type</b>	Poll request

**Comment** Poll the whole navigation data base. The receiver will send all available data from its internal database. The receiver will indicate the finish of the transmission with a [UBX-MGA-ACK](#). The msgPayloadStart field of the UBX-MGA-ACK message will contain a U4 representing the number of UBX-MGA-DBD-DATA\* messages sent.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x80	0	see below	CK_A CK_B
<b>Payload</b>	This message has no payload.					

### 3.13.3.2 Navigation database dump entry

**Message** **UBX-MGA-DBD**  
**Navigation database dump entry**

**Type** Input/output

**Comment** Navigation database entry. The data fields are firmware-specific. Transmission of this type of message will be acknowledged by [UBX-MGA-ACK](#) messages, if acknowledgment has been enabled. See the section AssistNow online in [Integration manual](#) for details.

The maximum payload size for firmware 2.01 onwards is 164 bytes (which makes the maximum message size 172 bytes).

↳ UBX-MGA-DBD messages are only intended to be sent back to the same receiver that generated them.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x80	12 + [0..n]	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1[12]	reserved0	-	-	<a href="#">Reserved</a>
<i>Start of repeated group (N times)</i>					
12 + n	U1	data	-	-	firmware-specific data
<i>End of repeated group (N times)</i>					

### 3.13.4 UBX-MGA-GAL (0x13 0x02)

#### 3.13.4.1 Galileo ephemeris assistance

**Message** **UBX-MGA-GAL-EPH**  
**Galileo ephemeris assistance**

**Type** Input

**Comment** This message allows the delivery of Galileo ephemeris assistance to a receiver. See the section AssistNow online in [Integration manual](#) for details.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x02	76	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x01 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	svId	-	-	Galileo Satellite identifier (see <a href="#">Satellite Numbering</a> )
3	U1	reserved0	-	-	<a href="#">Reserved</a>
4	U2	iodNav	-	-	Ephemeris and clock correction Issue of Data
6	I2	deltaN	2 <sup>-43</sup>	semi-circles/s	Mean motion difference from computed value
8	I4	m0	2 <sup>-31</sup>	semi-circles	Mean anomaly at reference time

12	U4	e	2 <sup>-33</sup>	-	Eccentricity
16	U4	sqrtA	2 <sup>-19</sup>	m <sup>0.5</sup>	Square root of the semi-major axis
20	I4	omega0	2 <sup>-31</sup>	semi-circles	Longitude of ascending node of orbital plane at weekly epoch
24	I4	i0	2 <sup>-31</sup>	semi-circles	Inclination angle at reference time
28	I4	omega	2 <sup>-31</sup>	semi-circles	Argument of perigee
32	I4	omegaDot	2 <sup>-43</sup>	semi-circles/s	Rate of change of right ascension
36	I2	iDot	2 <sup>-43</sup>	semi-circles/s	Rate of change of inclination angle
38	I2	cuc	2 <sup>-29</sup>	radians	Amplitude of the cosine harmonic correction term to the argument of latitude
40	I2	cus	2 <sup>-29</sup>	radians	Amplitude of the sine harmonic correction term to the argument of latitude
42	I2	crc	2 <sup>-5</sup>	radians	Amplitude of the cosine harmonic correction term to the orbit radius
44	I2	crs	2 <sup>-5</sup>	radians	Amplitude of the sine harmonic correction term to the orbit radius
46	I2	cic	2 <sup>-29</sup>	radians	Amplitude of the cosine harmonic correction term to the angle of inclination
48	I2	cis	2 <sup>-29</sup>	radians	Amplitude of the sine harmonic correction term to the angle of inclination
50	U2	toe	60	s	Ephemeris reference time
52	I4	af0	2 <sup>-34</sup>	s	SV clock bias correction coefficient
56	I4	af1	2 <sup>-46</sup>	s/s	SV clock drift correction coefficient
60	I1	af2	2 <sup>-59</sup>	s/s squared	SV clock drift rate correction coefficient
61	U1	sisaIndexE1E5b	-	-	Signal-In-Space Accuracy index for dual frequency E1-E5b
62	U2	toc	60	s	Clock correction data reference Time of Week
64	I2	bgdE1E5b	-	-	E1-E5b Broadcast Group Delay
66	U1[2]	reserved1	-	-	<a href="#">Reserved</a>
68	U1	healthE1B	-	-	E1-B Signal Health Status
69	U1	dataValidityE1B	-	-	E1-B Data Validity Status
70	U1	healthE5b	-	-	E5b Signal Health Status
71	U1	dataValidityE5b	-	-	E5b Data Validity Status
72	U1[4]	reserved2	-	-	<a href="#">Reserved</a>

### 3.13.4.2 Galileo almanac assistance

**Message**    **UBX-MGA-GAL-ALM**  
**Galileo almanac assistance**

**Type**        Input

**Comment**    This message allows the delivery of Galileo almanac assistance to a receiver.  
 See the section AssistNow online in [Integration manual](#) for details.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x02	32	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x02 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	svId	-	-	Galileo Satellite identifier (see <a href="#">Satellite Numbering</a> )
3	U1	reserved0	-	-	<a href="#">Reserved</a>
4	U1	ioda	-	-	Almanac Issue of Data
5	U1	almWNa	-	week	Almanac reference week number
6	U2	toa	600	s	Almanac reference time
8	I2	deltaSqrtA	2 <sup>-9</sup>	m <sup>0.5</sup>	Difference with respect to the square root of the nominal semi-major axis (29 600 km)
10	U2	e	2 <sup>-16</sup>	-	Eccentricity
12	I2	deltaI	2 <sup>-14</sup>	semi-circles	Inclination at reference time relative to i0 = 56 degree
14	I2	omega0	2 <sup>-15</sup>	semi-circles	Longitude of ascending node of orbital plane at weekly epoch
16	I2	omegaDot	2 <sup>-33</sup>	semi-circles/s	Rate of change of right ascension
18	I2	omega	2 <sup>-15</sup>	semi-circles	Argument of perigee
20	I2	m0	2 <sup>-15</sup>	semi-circles	Satellite mean anomaly at reference time
22	I2	af0	2 <sup>-19</sup>	s	Satellite clock correction bias 'truncated'
24	I2	af1	2 <sup>-38</sup>	s/s	Satellite clock correction linear 'truncated'
26	U1	healthE1B	-	-	Satellite E1-B signal health status
27	U1	healthE5b	-	-	Satellite E5b signal health status
28	U1[4]	reserved1	-	-	<a href="#">Reserved</a>

### 3.13.4.3 Galileo GPS time offset assistance

<b>Message</b>	<b>UBX-MGA-GAL-TIMEOFFSET</b> <b>Galileo GPS time offset assistance</b>
----------------	--

Type	Input
------	-------

Comment	This message allows the delivery of Galileo time to GPS time offset. See the section AssistNow online in <a href="#">Integration manual</a> for details.
---------	---

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x02	12	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x03 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	<a href="#">Reserved</a>
4	I2	a0G	2 <sup>-35</sup>	s	Constant term of the polynomial describing the offset
6	I2	a1G	2 <sup>-51</sup>	s/s	Rate of change of the offset
8	U1	t0G	3600	s	Reference time for GGTO data

9	U1	wn0G	-	weeks	Week Number of GGTO reference
10	U1[2]	reserved1	-	-	Reserved

### 3.13.4.4 Galileo UTC assistance

<b>Message</b>	<b>UBX-MGA-GAL-UTC</b>				
	<b>Galileo UTC assistance</b>				
<b>Type</b>	Input				
<b>Comment</b>	This message allows the delivery of Galileo UTC assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.				
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>
	0xb5 0x62	0x13	0x02	20	see below
					CK_A CK_B

2	U1[2]	reserved0	-	-	Reserved
4	I4	a0	2 <sup>-30</sup>	s	First parameter of UTC polynomial
8	I4	a1	2 <sup>-50</sup>	s/s	Second parameter of UTC polynomial
12	I1	dtLS	-	s	Delta time due to current leap seconds
13	U1	tot	3600	s	UTC parameters reference time of week (Galileo time)
14	U1	wnt	-	weeks	UTC parameters reference week number (the 8-bit WNt field)
15	U1	wnLSF	-	weeks	Week number at the end of which the future leap second becomes effective (the 8-bit WNLSF field)
16	U1	dN	-	days	Day number at the end of which the future leap second becomes effective
17	I1	dTLSF	-	s	Delta time due to future leap seconds
18	U1[2]	reserved1	-	-	Reserved

### 3.13.5 UBX-MGA-GLO (0x13 0x06)

#### 3.13.5.1 GLONASS ephemeris assistance

<b>Message</b>	<b>UBX-MGA-GLO-EPH</b>				
	<b>GLONASS ephemeris assistance</b>				
<b>Type</b>	Input				
<b>Comment</b>	This message allows the delivery of GLONASS ephemeris assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.				
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>
	0xb5 0x62	0x13	0x06	48	see below
					CK_A CK_B
<i>Payload description:</i>					
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>
0	U1	type	-	-	Message type (0x01 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	svId	-	-	GLONASS Satellite identifier (see <a href="#">Satellite Numbering</a> )
3	U1	reserved0	-	-	Reserved

4	U1	FT	-	-	User range accuracy
5	U1	B	-	-	Health flag from string 2
6	U1	M	-	-	Type of GLONASS satellite (1 indicates GLONASS-M)
7	I1	H	-	-	Carrier frequency number of navigation RF signal, Range=(-7 .. 6), -128 for unknown
8	I4	x	2 <sup>-11</sup>	km	X component of the SV position in PZ-90.02 coordinate System
12	I4	y	2 <sup>-11</sup>	km	Y component of the SV position in PZ-90.02 coordinate System
16	I4	z	2 <sup>-11</sup>	km	Z component of the SV position in PZ-90.02 coordinate System
20	I4	dx	2 <sup>-20</sup>	km/s	X component of the SV velocity in PZ-90.02 coordinate System
24	I4	dy	2 <sup>-20</sup>	km/s	Y component of the SV velocity in PZ-90.02 coordinate System
28	I4	dz	2 <sup>-20</sup>	km/s	Z component of the SV velocity in PZ-90.02 coordinate System
32	I1	ddx	2 <sup>-30</sup>	km/s <sup>2</sup>	X component of the SV acceleration in PZ-90.02 coordinate System
33	I1	ddy	2 <sup>-30</sup>	km/s <sup>2</sup>	Y component of the SV acceleration in PZ-90.02 coordinate System
34	I1	ddz	2 <sup>-30</sup>	km/s <sup>2</sup>	Z component of the SV acceleration in PZ-90.02 coordinate System
35	U1	tb	15	minutes	Index of a time interval within current day according to UTC(SU)
36	I2	gamma	2 <sup>-40</sup>	-	Relative carrier frequency deviation
38	U1	E	-	days	Ephemeris data age indicator
39	I1	deltaTau	2 <sup>-30</sup>	s	Time difference between L2 and L1 band
40	I4	tau	2 <sup>-30</sup>	s	SV clock bias
44	U1[4]	reserved1	-	-	Reserved

### 3.13.5.2 GLONASS almanac assistance

<b>Message</b>	<b>UBX-MGA-GLO-ALM GLONASS almanac assistance</b>					
Type	Input					
Comment	This message allows the delivery of GLONASS almanac assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x06	36	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x02 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1	svId	-	-	GLONASS Satellite identifier	(see <a href="#">Satellite Numbering</a> )
3	U1	reserved0	-	-	Reserved	

4	U2	N	-	days	Reference calendar day number of almanac within the four-year period (from string 5)
6	U1	M	-	-	Type of GLONASS satellite (1 indicates GLONASS-M)
7	U1	C	-	-	Unhealthy flag at instant of almanac upload (1 indicates operability of satellite)
8	I2	tau	2 <sup>-18</sup>	s	Coarse time correction to GLONASS time
10	U2	epsilon	2 <sup>-20</sup>	-	Eccentricity
12	I4	lambda	2 <sup>-20</sup>	semi-circles	Longitude of the first (within the N-day) ascending node of satellite orbit in PC-90.02 coordinate system
16	I4	deltaI	2 <sup>-20</sup>	semi-circles	Correction to the mean value of inclination
20	U4	tLambda	2 <sup>-5</sup>	s	Time of the first ascending node passage
24	I4	deltaT	2 <sup>-9</sup>	s/orbital-period	Correction to the mean value of Draconian period
28	I1	deltaDT	2 <sup>-14</sup>	s/orbital-period <sup>2</sup>	Rate of change of Draconian period
29	I1	H	-	-	Carrier frequency number of navigation RF signal, Range=(-7 .. 6)
30	I2	omega	-	-	Argument of perigee
32	U1[4]	reserved1	-	-	Reserved

### 3.13.5.3 GLONASS auxiliary time offset assistance

<b>Message</b>	<b>UBX-MGA-GLO-TIMEOFFSET</b>				
	<b>GLONASS auxiliary time offset assistance</b>				
Type	Input				
Comment	This message allows the delivery of auxiliary GLONASS assistance (including the GLONASS time offsets to other GNSS systems) to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.				
Message structure	Header	Class	ID	Length (Bytes)	Checksum
	0xb5 0x62	0x13	0x06	20	see below
Payload description:					
Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x03 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U2	N	-	days	Reference calendar day number within the four-year period of almanac (from string 5)
4	I4	tauC	2 <sup>-27</sup>	s	Time scale correction to UTC(SU) time
8	I4	tauGps	2 <sup>-31</sup>	s	Correction to GPS time relative to GLONASS time
12	I2	B1	2 <sup>-10</sup>	s	Coefficient to determine delta UT1
14	I2	B2	2 <sup>-16</sup>	s/msd	Rate of change of delta UT1
16	U1[4]	reserved0	-	-	Reserved

### 3.13.6 UBX-MGA-GPS (0x13 0x00)

### 3.13.6.1 GPS ephemeris assistance

<b>Message</b>		<b>UBX-MGA-GPS-EPH</b>				
		<b>GPS ephemeris assistance</b>				
<i>Type</i>	Input					
<i>Comment</i>	This message allows the delivery of GPS ephemeris assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

3	U1	reserved0	-	-	<a href="#">Reserved</a>	
4	U1	fitInterval	-	-	Fit interval flag	
5	U1	uraIndex	-	-	URA index	
6	U1	svHealth	-	-	SV health	
7	I1	tgd	2 <sup>-31</sup>	s	Group delay differential	
8	U2	iodc	-	-	IODC	
10	U2	toc	2 <sup>4</sup>	s	Clock data reference time	
12	U1	reserved1	-	-	<a href="#">Reserved</a>	
13	I1	af2	2 <sup>-55</sup>	s/s squared	Time polynomial coefficient 2	
14	I2	af1	2 <sup>-43</sup>	s/s	Time polynomial coefficient 1	
16	I4	af0	2 <sup>-31</sup>	s	Time polynomial coefficient 0	
20	I2	crs	2 <sup>-5</sup>	m	Crs	
22	I2	deltaN	2 <sup>-43</sup>	semi-circles/s	Mean motion difference from computed value	
24	I4	m0	2 <sup>-31</sup>	semi-circles	Mean anomaly at reference time	
28	I2	cuc	2 <sup>-29</sup>	radians	Amplitude of cosine harmonic correction term to argument of latitude	
30	I2	cus	2 <sup>-29</sup>	radians	Amplitude of sine harmonic correction term to argument of latitude	
32	U4	e	2 <sup>-33</sup>	-	Eccentricity	
36	U4	sqrtA	2 <sup>-19</sup>	m <sup>0.5</sup>	Square root of the semi-major axis	
40	U2	toe	2 <sup>4</sup>	s	Reference time of ephemeris	
42	I2	cic	2 <sup>-29</sup>	radians	Amplitude of cos harmonic correction term to angle of inclination	
44	I4	omega0	2 <sup>-31</sup>	semi-circles	Longitude of ascending node of orbit plane at weekly epoch	
48	I2	cis	2 <sup>-29</sup>	radians	Amplitude of sine harmonic correction term to angle of inclination	
50	I2	crc	2 <sup>-5</sup>	m	Amplitude of cosine harmonic correction term to orbit radius	

52	I4	i0	2 <sup>-31</sup>	semi-circles	Inclination angle at reference time
56	I4	omega	2 <sup>-31</sup>	semi-circles	Argument of perigee
60	I4	omegaDot	2 <sup>-43</sup>	semi-circles/s	Rate of right ascension
64	I2	idot	2 <sup>-43</sup>	semi-circles/s	Rate of inclination angle
66	U1[2]	reserved2	-	-	Reserved

### 3.13.6.2 GPS almanac assistance

<b>Message</b>	<b>UBX-MGA-GPS-ALM</b>					
	<b>GPS almanac assistance</b>					
Type	Input					
Comment	This message allows the delivery of GPS almanac assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x00	36	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	type	-	-	Message type (0x02 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1	svId	-	-	GPS Satellite identifier (see <a href="#">Satellite Numbering</a> )	
3	U1	svHealth	-	-	SV health information	
4	U2	e	2 <sup>-21</sup>	-	Eccentricity	
6	U1	almWNa	-	week	Reference week number of almanac (the 8-bit WNa field)	
7	U1	toa	2 <sup>-12</sup>	s	Reference time of almanac	
8	I2	deltaI	2 <sup>-19</sup>	semi-circles	Delta inclination angle at reference time	
10	I2	omegaDot	2 <sup>-38</sup>	semi-circles/s	Rate of right ascension	
12	U4	sqrtA	2 <sup>-11</sup>	m <sup>0.5</sup>	Square root of the semi-major axis	
16	I4	omega0	2 <sup>-23</sup>	semi-circles	Longitude of ascending node of orbit plane	
20	I4	omega	2 <sup>-23</sup>	semi-circles	Argument of perigee	
24	I4	m0	2 <sup>-23</sup>	semi-circles	Mean anomaly at reference time	
28	I2	af0	2 <sup>-20</sup>	s	Time polynomial coefficient 0 (8 MSBs)	
30	I2	af1	2 <sup>-38</sup>	s/s	Time polynomial coefficient 1	
32	U1[4]	reserved0	-	-	Reserved	

### 3.13.6.3 GPS health assistance

<b>Message</b>	<b>UBX-MGA-GPS-HEALTH</b>					
	<b>GPS health assistance</b>					
Type	Input					
Comment	This message allows the delivery of GPS health assistance to a receiver.					

See the section AssistNow online in [Integration manual](#) for details.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x00	40	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x04 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	Reserved
4	U1[32]	healthCode	-	-	Each byte represents a GPS SV (1-32). The 6 LSBs of each byte contains the 6 bit health code from subframes 4/5 page 25.
36	U1[4]	reserved1	-	-	Reserved

### 3.13.6.4 GPS UTC assistance

Message	UBX-MGA-GPS-UTC GPS UTC assistance					
Type	Input					
Comment	This message allows the delivery of GPS UTC assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x00	20	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	type	-	-	Message type (0x05 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	Reserved
4	I4	utcA0	2 <sup>-30</sup>	s	First parameter of UTC polynomial
8	I4	utcA1	2 <sup>-50</sup>	s/s	Second parameter of UTC polynomial
12	I1	utcDtLS	-	s	Delta time due to current leap seconds
13	U1	utcTot	2 <sup>12</sup>	s	UTC parameters reference time of week (GPS time)
14	U1	utcWNt	-	weeks	UTC parameters reference week number (the 8-bit WNt field)
15	U1	utcWNlsf	-	weeks	Week number at the end of which the future leap second becomes effective (the 8-bit WNLSF field)
16	U1	utcDn	-	days	Day number at the end of which the future leap second becomes effective
17	I1	utcDtLSF	-	s	Delta time due to future leap seconds
18	U1[2]	reserved1	-	-	Reserved

### 3.13.6.5 GPS ionosphere assistance

Message	UBX-MGA-GPS-IONO GPS ionosphere assistance					
Type	Input					
Comment	This message allows the delivery of GPS ionospheric assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x00	16	see below	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description

### 3.13.7 UBX-MGA-INI (0x13 0x40)

#### 3.13.7.1 Initial position assistance

Message	UBX-MGA-INI-POS_XYZ Initial position assistance
Type	Input
Comment	<p>This message allows the delivery of initial position assistance to a receiver in cartesian ECEF coordinates. This message is equivalent to the <a href="#">UBX-MGA-INI-POS_LLH</a> message, except for the coordinate system. See the section AssistNow online in <a href="#">Integration manual</a> for details.</p> <p>↪ Supplying position assistance that is inaccurate by more than the specified position accuracy, may lead to substantially degraded receiver performance.</p>

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x13	0x40	20	see below	CK_A CK_B

8	I4	ecefY	-	cm	WGS84 ECEF Y coordinate
12	I4	ecefZ	-	cm	WGS84 ECEF Z coordinate
16	U4	posAcc	-	cm	Position accuracy (stddev)

### 3.13.7.2 Initial position assistance

<b>Message</b>	<b>UBX-MGA-INI-POS_LLH</b> <b>Initial position assistance</b>					
<b>Type</b>	Input					
<b>Comment</b>	This message allows the delivery of initial position assistance to a receiver in WGS84 lat/long/alt coordinates. This message is equivalent to the <a href="#">UBX-MGA-INI-POS_XYZ</a> message, except for the coordinate system. See the section AssistNow online in <a href="#">Integration manual</a> for details. ☞ Supplying position assistance that is inaccurate by more than the specified position accuracy, may lead to substantially degraded receiver performance.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

2	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
4	I4	lat	1e-7	deg	WGS84 Latitude	
8	I4	lon	1e-7	deg	WGS84 Longitude	
12	I4	alt	-	cm	WGS84 Altitude	
16	U4	posAcc	-	cm	Position accuracy (stddev)	

### 3.13.7.3 Initial time assistance

<b>Message</b>	<b>UBX-MGA-INI-TIME.UTC</b> <b>Initial time assistance</b>					
<b>Type</b>	Input					
<b>Comment</b>	This message allows the delivery of UTC time assistance to a receiver. This message is equivalent to the <a href="#">UBX-MGA-INI-TIME_GNSS</a> message, except for the time base. See the section AssistNow online in <a href="#">Integration manual</a> for details. ☞ Supplying time assistance that is inaccurate by more than the specified time accuracy, may lead to substantially degraded receiver performance.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x13	0x40	24	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	type	-	-	Message type (0x10 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	X1	ref	-	-	Reference to be used to set time	
bits 3...0	U:4	source	-	-	<ul style="list-style-type: none"> <li>0 = none, i.e. on receipt of message (will be inaccurate!)</li> <li>1 = relative to pulse sent to EXTINT0</li> <li>2 = relative to pulse sent to EXTINT1</li> <li>3-15 = reserved</li> </ul>	
bit 4	U:1	fall	-	-	use falling edge of EXTINT pulse (default rising) - only if source is EXTINT	
bit 5	U:1	last	-	-	use last EXTINT pulse (default next pulse) - only if source is EXTINT	
3	I1	leapSecs	-	s	Number of leap seconds since 1980 (or 0x80 = -128 if unknown)	

4	U2	year	-	-	Year
6	U1	month	-	-	Month, starting at 1
7	U1	day	-	-	Day, starting at 1
8	U1	hour	-	-	Hour, from 0 to 23

20	U4	tAccNs	-	ns	Nanoseconds part of time accuracy, from 0 to 999,999,999

### 3.13.7.4 Initial time assistance

**Message**    **UBX-MGA-INI-TIME\_GNSS**  
**Initial time assistance**

**Type**        Input

**Comment**    This message allows the delivery of time assistance to a receiver in a chosen GNSS timebase. This message is equivalent to the [UBX-MGA-INI-TIME\\_UTC](#) message, except for the time base.

See the section AssistNow online in [Integration manual](#) for details.

☞ Supplying time assistance that is inaccurate by more than the specified time accuracy, may lead to substantially degraded receiver performance.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum

### 3.13.8.3 QZSS health assistance

<b>Message</b>	<b>UBX-MGA-QZSS-HEALTH</b> <b>QZSS health assistance</b>					
Type	Input					

<b>Comment</b>	This message allows the delivery of QZSS health assistance to a receiver. See the section AssistNow online in <a href="#">Integration manual</a> for details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x13	0x05	12	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	type	-	-	Message type (0x04 for this type)	
1	U1	version	-	-	Message version (0x00 for this version)	
2	U1[2]	reserved0	-	-	Reserved	
4	U1[5]	healthCode	-	-	Each byte represents a QZSS SV (1-5). The 6 LSBs of each byte contains the 6 bit health code from subframes 4/5, data ID = 3, SV ID = 51	
9	U1[3]	reserved1	-	-	Reserved	

## 3.14 UBX-MON (0x0a)

The messages in the UBX-MON class are used to report the receiver status, such as hardware status or I/O subsystem statistics.

### 3.14.1 UBX-MON-COMMS (0x0a 0x36)

#### 3.14.1.1 Communication port information

<b>Message</b>	<b>UBX-MON-COMMS</b> <b>Communication port information</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	Consolidated communications information for all ports. The size of the message is determined by the number of ports that are in use on the receiver. A port is only included if communication, either send or receive, has been initiated on that port.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x36	8 + nPorts·40	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	nPorts	-	-	Number of ports included	
2	X1	txErrors	-	-	TX error bitmask	
bit 0	U:1	mem	-	-	Memory Allocation error	
	U:1	alloc	-	-	Allocation error (TX buffer full)	
3	U1	reserved0	-	-	Reserved	
4	U1[4]	protIds	-	-	The identifiers of the protocols reported in the msggs array. 0: UBX, 1: NMEA, 2: RTCM2, 5: RTCM3, 6: SPARTN, 0xFF: No protocol reported.	
<i>Start of repeated group (nPorts times)</i>						
8 + n·40	U2	portId	-	-	Unique identifier for the port. See section Communications ports in <a href="#">Integration manual</a> for details.	
10 + n·40	U2	txPending	-	bytes	Number of bytes pending in transmitter buffer	
12 + n·40	U4	txBytes	-	bytes	Number of bytes ever sent	

16 + n·40	U1	txUsage	-	%	Maximum usage transmitter buffer during the last sysmon period
17 + n·40	U1	txPeakUsage	-	%	Maximum usage transmitter buffer
18 + n·40	U2	rxPending	-	bytes	Number of bytes in receiver buffer
20 + n·40	U4	rxBytes	-	bytes	Number of bytes ever received
24 + n·40	U1	rxUsage	-	%	Maximum usage receiver buffer during the last sysmon period
25 + n·40	U1	rxPeakUsage	-	%	Maximum usage receiver buffer
26 + n·40	U2	overrunErrs	-	-	Number of 100 ms timeslots with overrun errors
28 + n·40	U2[4]	msgs	-	msg	Number of successfully parsed messages for each protocol. The reported protocols are identified through the protIds field.
36 + n·40	U1[8]	reserved1	-	-	<a href="#">Reserved</a>
44 + n·40	U4	skipped	-	bytes	Number of skipped bytes

*End of repeated group (nPorts times)*

### 3.14.2 UBX-MON-GNSS (0x0a 0x28)

#### 3.14.2.1 Information message major GNSS selection

<b>Message</b>		<b>UBX-MON-GNSS</b>				
		<b>Information message major GNSS selection</b>				
<i>Type</i>	Polled					
<i>Comment</i>	This message reports major GNSS selection. It does this by means of bit masks in U1 fields. Each bit in a bit mask corresponds to one major GNSS. Augmentation systems are not reported.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x28	8	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x01 for this version)	
1	X1	supported	-	-	A bit mask showing the major GNSS that can be supported by this receiver	
bit 0	U:1	GPSSup	-	-	GPS is supported	
bit 1	U:1	GlonassSup	-	-	GLONASS is supported	
bit 2	U:1	BeidouSup	-	-	BeiDou is supported	
bit 3	U:1	GalileoSup	-	-	Galileo is supported	
2	X1	defaultGnss	-	-	A bit mask showing the default major GNSS selection. If the default major GNSS selection is currently configured in the efuse for this receiver, it takes precedence over the default major GNSS selection configured in the executing firmware of this receiver.	
bit 0	U:1	GPSDef	-	-	GPS is default-enabled	
bit 1	U:1	GlonassDef	-	-	GLONASS is default-enabled	
bit 2	U:1	BeidouDef	-	-	BeiDou is default-enabled	
bit 3	U:1	GalileoDef	-	-	Galileo is default-enabled	
3	X1	enabled	-	-	A bit mask showing the current major GNSS selection enabled for this receiver	

bit 0	U:1	GPSEna	-	-	GPS is enabled
bit 1	U:1	GlonassEna	-	-	GLONASS is enabled
bit 2	U:1	BeidouEna	-	-	BeiDou is enabled
bit 3	U:1	GalileoEna	-	-	Galileo is enabled
4	U1	simultaneous	-	-	Maximum number of concurrent major GNSS that can be supported by this receiver
5	U1[3]	reserved0	-	-	Reserved

### 3.14.3 UBX-MON-HW (0x0a 0x09)

#### 3.14.3.1 Hardware status

Message	UBX-MON-HW Hardware status					
Type	Periodic/pollled					
Comment	<b>This message is deprecated in this protocol version. Use UBX-MON-HW3 and UBX-MON-RF instead.</b> Status of different aspects of the hardware, such as antenna, PIO/peripheral pins, noise level, automatic gain control (AGC)					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x09	60	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	X4	pinSel	-	-	Mask of pins set as peripheral/PIO	
4	X4	pinBank	-	-	Mask of pins set as bank A/B	
8	X4	pinDir	-	-	Mask of pins set as input/output	
12	X4	pinVal	-	-	Mask of pins value low/high	
16	U2	noisePerMS	-	-	Noise level as measured by the GPS core	
18	U2	agcCnt	-	-	AGC monitor (counts SIGHI xor SIGLO, range 0 to 8191)	
20	U1	aStatus	-	-	Status of the antenna supervisor state machine (0=INIT, 1=DONTKNOW, 2=OK, 3=SHORT, 4=OPEN)	
21	U1	aPower	-	-	Current power status of antenna (0=OFF, 1=ON, 2=DONTKNOW)	
22	X1	flags	-	-	Flags	
bit 0	U:1	rtcCalib	-	-	RTC is calibrated	
bit 1	U:1	safeBoot	-	-	Safeboot mode (0 = inactive, 1 = active)	
bits 3...2	U:2	jammingState	-	-	Output from jamming/interference monitor (0 = unknown or feature disabled, 1 = ok - no significant jamming, 2 = warning - interference visible but fix OK, 3 = critical - interference visible and no fix)	
bit 4	U:1	xtalAbsent	-	-	RTC xtal has been determined to be absent (not supported for protocol versions less than 18.00)	
23	U1	reserved0	-	-	Reserved	
24	X4	usedMask	-	-	Mask of pins that are used by the virtual pin manager	
28	U1[17]	VP	-	-	Array of pin mappings for each of the 17 physical pins	
45	U1	jamInd	-	-	CW jamming indicator, scaled (0 = no CW jamming, 255 = strong CW jamming)	

46	U1[2]	reserved1	-	-	Reserved
48	X4	pinIrq	-	-	Mask of pins value using the PIO Irq
52	X4	pullH	-	-	Mask of pins value using the PIO pull high resistor
56	X4	pullL	-	-	Mask of pins value using the PIO pull low resistor

### 3.14.4 UBX-MON-HW2 (0x0a 0x0b)

#### 3.14.4.1 Extended hardware status

<b>Message</b>	<b>UBX-MON-HW2</b>					
	<b>Extended hardware status</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	<p><b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-HW3</a> and <a href="#">UBX-MON-RF</a> instead.</b></p> <p>Status of different aspects of the hardware such as Imbalance, Low-Level Configuration and POST Results. The first four parameters of this message represent the complex signal from the RF front end. The following rules of thumb apply:</p> <ul style="list-style-type: none"> <li>The smaller the absolute value of the variable <code>ofsI</code> and <code>ofsQ</code>, the better.</li> <li>Ideally, the magnitude of the I-part (<code>magI</code>) and the Q-part (<code>magQ</code>) of the complex signal should be the same.</li> </ul>					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x0b	28	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	I1	<code>ofsI</code>	-	-	Imbalance of I-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)	
1	U1	<code>magI</code>	-	-	Magnitude of I-part of complex signal, scaled (0 = no signal, 255 = max. magnitude)	
2	I1	<code>ofsQ</code>	-	-	Imbalance of Q-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)	
3	U1	<code>magQ</code>	-	-	Magnitude of Q-part of complex signal, scaled (0 = no signal, 255 = max. magnitude)	
4	U1	<code>cfgSource</code>	-	-	Source of low-level configuration (114 = ROM, 111 = OTP, 112 = config pins, 102 = flash image)	
5	U1[3]	reserved0	-	-	Reserved	
8	U4	<code>lowLevCfg</code>	-	-	Low-level configuration (obsolete for protocol versions greater than 15.00)	
12	U1[8]	reserved1	-	-	Reserved	
20	U4	<code>postStatus</code>	-	-	POST status word	
24	U1[4]	reserved2	-	-	Reserved	

### 3.14.5 UBX-MON-HW3 (0x0a 0x37)

#### 3.14.5.1 I/O pin status

<b>Message</b>	<b>UBX-MON-HW3</b>					
	<b>I/O pin status</b>					
<i>Type</i>	Periodic/pollled					

**Comment** This message contains information specific to each HW I/O pin, for example whether the pin is set as Input or Output.

For the antenna supervisor status and other RF status information, see the [UBX-MON-RF](#) message.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x37	22 + nPins*6	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U1	version	-	-	Message version (0x00 for this version)
1	U1	nPins	-	-	The number of I/O pins included
2	X1	flags	-	-	Flags
bit 0	U:1	rtcCalib	-	-	RTC is calibrated
bit 1	U:1	safeBoot	-	-	Safeboot mode (0 = inactive, 1 = active)
bit 2	U:1	xtalAbsent	-	-	RTC xtal has been determined to be absent
3	CH[10]	hwVersion	-	-	Zero-terminated hardware version string (same as that returned in the <a href="#">UBX-MON-VER</a> message)
13	U1[9]	reserved0	-	-	<a href="#">Reserved</a>

**Start of repeated group (nPins times)**

22 + n*6	U2	pinId	-	-	Identifier for the pin, including both external and internal pins.
24 + n*6	X2	pinMask	-	-	Pin mask
bit 0	U:1	periphPIO	-	-	Pin is set to peripheral or PIO? 0=Peripheral 1=PIO
bits 3...1	U:3	pinBank	-	-	Bank the pin belongs to, where 0=A 1=B 2=C 3=D 4=E 5=F 6=G 7=H
bit 4	U:1	direction	-	-	Pin direction? 0=Input 1=Output
bit 5	U:1	value	-	-	Pin value? 0=Low 1=High
bit 6	U:1	vpManager	-	-	Used by virtual pin manager? 0=No 1=Yes
bit 7	U:1	pioIrq	-	-	Interrupt enabled? 0=No 1=Yes
bit 8	U:1	pioPullHigh	-	-	Using pull high resistor? 0=No 1=Yes
bit 9	U:1	pioPullLow	-	-	Using pull low resistor 0=No 1=Yes
26 + n*6	U1	VP	-	-	Virtual pin mapping
27 + n*6	U1	reserved1	-	-	<a href="#">Reserved</a>

**End of repeated group (nPins times)**

### 3.14.6 UBX-MON-IO (0x0a 0x02)

#### 3.14.6.1 I/O system status

<b>Message</b>	<b>UBX-MON-IO</b> <b>I/O system status</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b> The size of the message is determined by the number of ports 'N' the receiver supports, i.e. on u-blox 5 the number of ports is 6.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x02	[0..n]:20	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
<i>Start of repeated group (N times)</i>					
0 + n·20	U4	rxBytes	-	bytes	Number of bytes ever received
4 + n·20	U4	txBytes	-	bytes	Number of bytes ever sent
8 + n·20	U2	parityErrs	-	-	Number of 100 ms timeslots with parity errors
10 + n·20	U2	framingErrs	-	-	Number of 100 ms timeslots with framing errors
12 + n·20	U2	overrunErrs	-	-	Number of 100 ms timeslots with overrun errors
14 + n·20	U2	breakCond	-	-	Number of 100 ms timeslots with break conditions
16 + n·20	U1[4]	reserved0	-	-	<a href="#">Reserved</a>
<i>End of repeated group (N times)</i>					

### 3.14.7 UBX-MON-MSGPP (0x0a 0x06)

#### 3.14.7.1 Message parse and process status

Message	UBX-MON-MSGPP Message parse and process status					
Type	Periodic/pollled					
Comment	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x06	120	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U2[8]	msg1	-	msgs	Number of successfully parsed messages for each protocol on port0	
16	U2[8]	msg2	-	msgs	Number of successfully parsed messages for each protocol on port1	
32	U2[8]	msg3	-	msgs	Number of successfully parsed messages for each protocol on port2	
48	U2[8]	msg4	-	msgs	Number of successfully parsed messages for each protocol on port3	
64	U2[8]	msg5	-	msgs	Number of successfully parsed messages for each protocol on port4	
80	U2[8]	msg6	-	msgs	Number of successfully parsed messages for each protocol on port5	
96	U4[6]	skipped	-	bytes	Number skipped bytes for each port	

### 3.14.8 UBX-MON-PATCH (0x0a 0x27)

#### 3.14.8.1 Installed patches

Message	UBX-MON-PATCH Installed patches					
Type	Polled					
Comment	This message reports information about patches installed and currently enabled on the receiver. It does not report on patches installed and then disabled. An enabled patch is considered active when the receiver executes from the code space where the patch resides on. For example, a ROM patch is reported active only when the system runs from ROM.					

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x27	4 + nEntries·16	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U2	version	-	-	Message version (0x0001 for this version)	
2	U2	nEntries	-	-	Total number of reported patches	
<i>Start of repeated group (nEntries times)</i>						
4 + n·16	X4	patchInfo	-	-	Status information about the reported patch	
bit 0	U:1	activated	-	-	1: the patch is active, 0: otherwise	
bits 2...1	U:2	location	-	-	Indicates where the patch is stored. 0: eFuse, 1: ROM, 2: BBR, 3: file system	
8 + n·16	U4	comparator Number	-	-	The number of the comparator	
12 + n·16	U4	patchAddress	-	-	The address that is targeted by the patch	
16 + n·16	U4	patchData	-	-	The data that is inserted at the patchAddress	
<i>End of repeated group (nEntries times)</i>						

### 3.14.9 UBX-MON-RF (0x0a 0x38)

#### 3.14.9.1 RF information

Message	UBX-MON-RF RF information					
Type	Periodic/polled					
Comment	Information for each RF block. There are as many RF blocks reported as bands supported by this receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x38	4 + nBlocks·24	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	nBlocks	-	-	The number of RF blocks included	
2	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
<i>Start of repeated group (nBlocks times)</i>						
4 + n·24	U1	blockId	-	-	RF block ID (0 = L1 band, 1 = L2 or L5 band depending on product configuration)	
5 + n·24	X1	flags	-	-	Flags	
bits 1...0	U:2	jammingState	-	-	output from Jamming/Interference Monitor (0 = unknown or feature disabled, 1 = ok - no significant jamming, 2 = warning - interference visible but fix OK, 3 = critical - interference visible and no fix)	
6 + n·24	U1	antStatus	-	-	Status of the antenna supervisor state machine (0x00=INIT, 0x01=DONTKNOW, 0x02=OK, 0x03=SHORT, 0x04=OPEN)	
7 + n·24	U1	antPower	-	-	Current power status of antenna (0x00=OFF, 0x01=ON, 0x02=DONTKNOW)	
8 + n·24	U4	postStatus	-	-	POST status word	
12 + n·24	U1[4]	reserved1	-	-	<a href="#">Reserved</a>	

16 + n·24	U2	noisePerMS	-	-	Noise level as measured by the GPS core
18 + n·24	U2	agcCnt	-	-	AGC Monitor (counts SIGHI xor SIGLO, range 0 to 8191)
20 + n·24	U1	jamInd	-	-	CW jamming indicator, scaled (0=no CW jamming, 255 = strong CW jamming)
21 + n·24	I1	ofsI	-	-	Imbalance of I-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)
22 + n·24	U1	magI	-	-	Magnitude of I-part of complex signal, scaled (0 = no signal, 255 = max.magnitude)
23 + n·24	I1	ofsQ	-	-	Imbalance of Q-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)
24 + n·24	U1	magQ	-	-	Magnitude of Q-part of complex signal, scaled (0 = no signal, 255 = max.magnitude)
25 + n·24	U1[3]	reserved2	-	-	<a href="#">Reserved</a>

*End of repeated group (nBlocks times)*

### 3.14.10 UBX-MON-RXBUF (0x0a 0x07)

#### 3.14.10.1 Receiver buffer status

<b>Message</b>	<b>UBX-MON-RXBUF</b>					
	<b>Receiver buffer status</b>					
Type	Periodic/polled					
Comment	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x07	24	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U2[6]	pending	-	bytes	Number of bytes pending in receiver buffer for each target	
12	U1[6]	usage	-	%	Maximum usage receiver buffer during the last sysmon period for each target	
18	U1[6]	peakUsage	-	%	Maximum usage receiver buffer for each target	

### 3.14.11 UBX-MON-RXR (0x0a 0x21)

#### 3.14.11.1 Receiver status information

<b>Message</b>	<b>UBX-MON-RXR</b>					
	<b>Receiver status information</b>					
Type	Output					
Comment	The receiver ready message is sent when the receiver changes from or to backup mode.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x21	1	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	X1	flags	-	-	Receiver status flags	

bit 0 U:1 awake - - not in backup mode

### 3.14.12 UBX-MON-SPAN (0x0a 0x31)

#### 3.14.12.1 Signal characteristics

<b>Message</b>	<b>UBX-MON-SPAN</b>					
	<b>Signal characteristics</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	<p>This message is to be used as a basic spectrum analyzer, where it displays one spectrum for each of the receiver's existing RF paths. The spectrum is conveyed with the following parameters: The frequency span in Hz, the frequency bin resolution in Hz, the center frequency in Hz, and 256 bins with amplitude data. Additionally, in order to give further insight on the signal captured by the receiver, the current gain of the internal programmable gain amplifier (PGA) is provided.</p> <p><b>This message gives information for comparative analysis rather than absolute and precise spectrum overview. Users should not expect highly accurate spectrum amplitude.</b></p> <p>Note that the PGA gain is not included in the spectrum data but is available as a separate field. Neither the spectrum, nor the PGA gain considers the internal fixed LNA gain or an external third-party LNA.</p> <p>The center frequency at each bin, assuming a zero-based bin count, can be computed as</p> $f(i) = center + span * (i - 128) / 256$					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x31	4 + numRfBlocks*272	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	numRfBlocks	-	-	Number of RF blocks included	
2	U1[2]	reserved0	-	-	Reserved	
<i>Start of repeated group (numRfBlocks times)</i>						
4 + n*272	U1[256]	spectrum	-	dB	Spectrum data (number of points = span/res)	
260 + n*272	U4	span	-	Hz	Spectrum span	
264 + n*272	U4	res	-	Hz	Resolution of the spectrum	
268 + n*272	U4	center	-	Hz	Center of spectrum span	
272 + n*272	U1	pga	-	dB	Programmable gain amplifier	
273 + n*272	U1[3]	reserved1	-	-	Reserved	
<i>End of repeated group (numRfBlocks times)</i>						

### 3.14.13 UBX-MON-SYS (0x0a 0x39)

#### 3.14.13.1 Current system performance state

<b>Message</b>	<b>UBX-MON-SYS</b>					
	<b>Current system performance state</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	<p>This message contains safety relevant system information for monitoring purposes.</p> <p>cpuLoadMax value is only valid, if 1 second output frequency is set.</p> <p>detailed informations about ioUsage/ioUsageMax are available in <a href="#">UBX-MON-COMMS</a> message</p> <p>tempValue has an accuracy of +/- 2 deg.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x39	24	see below	CK_A CK_B

## Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	msgVer	-	-	Message Version (0x01)
1	U1	bootType	-	-	Boot type of master chip 0-Unknown 1-Cold Start 2-Watchdog 3-Hardware reset 4-Hardware backup 5-Software backup 6-Software reset 7-VIO fail 8-VDD_X fail 9-VDD_RF fail 10-V_CORE_HIGH fail
2	U1	cpuLoad	-	-	Highest actual load of realtime tasks of all CPUs in %
3	U1	cpuLoadMax	-	-	Maximal CPU load value in % seen since last restart
4	U1	memUsage	-	-	Highest actual dynamic memory usage of all CPUs in %
5	U1	memUsageMax	-	-	Maximal dynamic memory usage in % seen since last restart
6	U1	ioUsage	-	-	Highest actual IO bandwidth usage of all rx/tx interfaces in %
7	U1	ioUsageMax	-	-	Maximal bandwidth usage of all rx/tx interfaces in % seen since last restart
8	U4	runTime	-	sec	Time since last restart
12	U2	noticeCount	-	-	Number of notices occurred since last restart
14	U2	warnCount	-	-	Number of warnings occurred since last restart
16	U2	errorCount	-	-	Number of errors occurred since last restart
18	I1	tempValue	-	-	Temperature value [C]

### 3.14.14 UBX-MON-TXBUF (0x0a 0x08)

#### 3.14.14.1 Transmitter buffer status

Message	UBX-MON-TXBUF Transmitter buffer status					
Type	Periodic/pollled					
Comment	<b>This message is deprecated in this protocol version. Use <a href="#">UBX-MON-COMMS</a> instead.</b>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x08	28	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U2[6]	pending	-	bytes	Number of bytes pending in transmitter buffer for each target	
12	U1[6]	usage	-	%	Maximum usage transmitter buffer during the last sysmon period for each target	

18	U1[6]	peakUsage	-	%	Maximum usage transmitter buffer for each target
24	U1	tUsage	-	%	Maximum usage of transmitter buffer during the last sysmon period for all targets
25	U1	tPeakusage	-	%	Maximum usage of transmitter buffer for all targets
26	X1	errors	-	-	Error bitmask
	bits 5...0	U:6	limit	-	Buffer limit of corresponding target reached
	bit 6	U:1	mem	-	Memory Allocation error
	bit 7	U:1	alloc	-	Allocation error (TX buffer full)
27	U1	reserved0	-	-	<a href="#">Reserved</a>

### 3.14.15 UBX-MON-VER (0x0a 0x04)

#### 3.14.15.1 Receiver and software version

<b>Message</b>	<b>UBX-MON-VER</b>					
	<b>Receiver and software version</b>					
<i>Type</i>	Polled					
<i>Comment</i>						
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0a	0x04	40 + [0..n]·30	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	CH[30]	swVersion	-	-	Nul-terminated software version string.	
30	CH[10]	hwVersion	-	-	Nul-terminated hardware version string	
<i>Start of repeated group (N times)</i>						
40 + n·30	CH[30]	extension	-	-	Extended software information strings. A series of nul-terminated strings. Each extension field is 30 characters long and contains varying software information. Not all extension fields may appear. Examples of reported information: the software version string of the underlying ROM (when the receiver's firmware is running from flash), the firmware version, the supported <a href="#">protocol version</a> , the module identifier, the flash information structure (FIS) file information, the supported major GNSS, the supported augmentation systems. See <a href="#">Firmware and protocol versions</a> for details.	
<i>End of repeated group (N times)</i>						

### 3.15 UBX-NAV (0x01)

The messages in the UBX-NAV class are used to output navigation results and data, such as position, altitude and velocity in a number of formats, and status flags and accuracy estimate figures, or satellite and signal information. The messages are generated with the configured navigation rate.

#### 3.15.1 UBX-NAV-CLOCK (0x01 0x22)

### 3.15.1.1 Clock solution

<b>Message</b>		<b>UBX-NAV-CLOCK</b>				
		<b>Clock solution</b>				
Type	Periodic/pollled					
Comment						
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x22	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section Navigation epochs in <a href="#">Integration manual</a> for details. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	I4	clkB	-	ns	Clock bias	
8	I4	clkD	-	ns/s	Clock drift	
12	U4	tAcc	-	ns	Time accuracy estimate	
16	U4	fAcc	-	ps/s	Frequency accuracy estimate	

### 3.15.2 UBX-NAV-COV (0x01 0x36)

#### 3.15.2.1 Covariance matrices

<b>Message</b>		<b>UBX-NAV-COV</b>				
		<b>Covariance matrices</b>				
Type	Periodic/pollled					
Comment	This message outputs the covariance matrices for the position and velocity solutions in the topocentric coordinate system defined as the local-level North (N), East (E), Down (D) frame. As the covariance matrices are symmetric, only the upper triangular part is output.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x36	64	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1	posCovValid	-	-	Position covariance matrix validity flag	
6	U1	velCovValid	-	-	Velocity covariance matrix validity flag	
7	U1[9]	reserved0	-	-	<a href="#">Reserved</a>	
16	R4	posCovNN	-	m <sup>2</sup>	Position covariance matrix value p <sub>NN</sub>	
20	R4	posCovNE	-	m <sup>2</sup>	Position covariance matrix value p <sub>NE</sub>	
24	R4	posCovND	-	m <sup>2</sup>	Position covariance matrix value p <sub>ND</sub>	
28	R4	posCovEE	-	m <sup>2</sup>	Position covariance matrix value p <sub>EE</sub>	
32	R4	posCovED	-	m <sup>2</sup>	Position covariance matrix value p <sub>ED</sub>	
36	R4	posCovDD	-	m <sup>2</sup>	Position covariance matrix value p <sub>DD</sub>	
40	R4	velCovNN	-	m <sup>2</sup> /s <sup>2</sup>	Velocity covariance matrix value v <sub>NN</sub>	

44	R4	velCovNE	-	$m^2/s^2$	Velocity covariance matrix value v_NE
48	R4	velCovND	-	$m^2/s^2$	Velocity covariance matrix value v_ND
52	R4	velCovEE	-	$m^2/s^2$	Velocity covariance matrix value v_EE
56	R4	velCovED	-	$m^2/s^2$	Velocity covariance matrix value v_ED
60	R4	velCovDD	-	$m^2/s^2$	Velocity covariance matrix value v_DD

### 3.15.3 UBX-NAV-DOP (0x01 0x04)

#### 3.15.3.1 Dilution of precision

<b>Message</b>	<b>UBX-NAV-DOP</b>					
	<b>Dilution of precision</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	<ul style="list-style-type: none"> <li>DOP values are dimensionless.</li> <li>All DOP values are scaled by a factor of 100. If the unit transmits a value of e.g. 156, the DOP value is 1.56.</li> </ul>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x04	18	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U2	gDOP	0.01	-	Geometric DOP	
6	U2	pDOP	0.01	-	Position DOP	
8	U2	tDOP	0.01	-	Time DOP	
10	U2	vDOP	0.01	-	Vertical DOP	
12	U2	hDOP	0.01	-	Horizontal DOP	
14	U2	nDOP	0.01	-	Northing DOP	
16	U2	eDOP	0.01	-	Easting DOP	

### 3.15.4 UBX-NAV-EOE (0x01 0x61)

#### 3.15.4.1 End of epoch

<b>Message</b>	<b>UBX-NAV-EOE</b>					
	<b>End of epoch</b>					
<b>Type</b>	Periodic					
<b>Comment</b>	This message is intended to be used as a marker to collect all navigation messages of an epoch. It is output after all enabled NAV class messages (except UBX-NAV-HNR) and after all enabled NMEA messages.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x61	4	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.
---	----	------	---	----	---

### 3.15.5 UBX-NAV-GEOFENCE (0x01 0x39)

#### 3.15.5.1 Geofencing status

<b>Message</b>	<b>UBX-NAV-GEOFENCE</b>					
	<b>Geofencing status</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message outputs the evaluated states of all configured geofences for the current epoch's position. See the section Geofencing in <a href="#">Integration manual</a> for feature details.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

### 3.15.7 UBX-NAV-ODO (0x01 0x09)

#### 3.15.7.1 Odometer solution

<b>Message</b>	<b>UBX-NAV-ODO</b>					
	<b>Odometer solution</b>					
<b>Type</b>	Periodic/poll					
<b>Comment</b>	This message outputs the traveled distance since last reset (see <a href="#">UBX-NAV-RESETODO</a> ) together with an associated estimated accuracy and the total cumulated ground distance (can only be reset by a cold start of the receiver).					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x09	20	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1[3]	reserved0	-	-	<a href="#">Reserved</a>	
4	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
8	U4	distance	-	m	Ground distance since last reset	
12	U4	totalDistance	-	m	Total cumulative ground distance	
16	U4	distanceStd	-	m	Ground distance accuracy (1-sigma)	

### 3.15.8 UBX-NAV-ORB (0x01 0x34)

#### 3.15.8.1 GNSS orbit database info

<b>Message</b>	<b>UBX-NAV-ORB</b>					
	<b>GNSS orbit database info</b>					
<b>Type</b>	Periodic/poll					
<b>Comment</b>	Status of the GNSS orbit database knowledge.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x01	0x34	8 + numSv-6	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U1	version	-	-	Message version (0x01 for this version)	
5	U1	numSv	-	-	Number of SVs in the database	
6	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
<b>Start of repeated group (numSv times)</b>						

8 + n-6	U1	gnssId	-	-	GNSS ID
9 + n-6	U1	svId	-	-	Satellite ID
10 + n-6	X1	svFlag	-	-	Information Flags
bits 1...0	U:2	health	-	-	SV health: <ul style="list-style-type: none"> <li>• 0 = unknown</li> <li>• 1 = healthy</li> <li>• 2 = not healthy</li> </ul>
bits 3...2	U:2	visibility	-	-	SV health: <ul style="list-style-type: none"> <li>• 0 = unknown</li> <li>• 1 = below horizon</li> <li>• 2 = above horizon</li> <li>• 3 = above elevation mask</li> </ul>
11 + n-6	X1	eph	-	-	Ephemeris data In products supporting L5 signals, the receiver may store multiple ephemeris data sets per satellite. ephUsability and ephSource fields show information on one of the data sets. It is not possible to choose which data set's status is shown.
bits 4...0	U:5	ephUsability	-	-	How long the receiver will be able to use the stored ephemeris data from now on: <ul style="list-style-type: none"> <li>• 31 = The usability period is unknown</li> <li>• 30 = The usability period is more than 450 minutes</li> <li>• 30 &gt; n &gt; 0 = The usability period is between (n-1)*15 and n*15 minutes</li> <li>• 0 = Ephemeris can no longer be used</li> </ul>

8	I4	lat	1e-7	deg	Latitude	
12	I4	height	-	mm	Height above ellipsoid	
16	I4	hMSL	-	mm	Height above mean sea level	
20	U4	hAcc	-	mm	Horizontal accuracy estimate	

24	U4	vAcc	-	mm	Vertical accuracy estimate
----	----	------	---	----	----------------------------

### 3.15.11 UBX-NAV-PVT (0x01 0x07)

#### 3.15.11.1 Navigation position velocity time solution

<b>Message</b>	<b>UBX-NAV-PVT</b>				
	<b>Navigation position velocity time solution</b>				
<b>Type</b>	Periodic/pollled				
<b>Comment</b>	This message combines position, velocity and time solution, including accuracy figures. Note that during a leap second there may be more or less than 60 seconds in a minute. See the description of leap seconds in the <a href="#">Integration manual</a> for details.				
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>
	0xb5 0x62	0x01	0x07	92	see below
<b>Checksum</b>	CK_A CK_B				
<b>Payload description:</b>					
<b>Byte offset</b>	<b>Type</b>	<b>Name</b>	<b>Scale</b>	<b>Unit</b>	<b>Description</b>
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.
4	U2	year	-	y	Year (UTC)
6	U1	month	-	month	Month, range 1..12 (UTC)
7	U1	day	-	d	Day of month, range 1..31 (UTC)
8	U1	hour	-	h	Hour of day, range 0..23 (UTC)
9	U1	min	-	min	Minute of hour, range 0..59 (UTC)
10	U1	sec	-	s	Seconds of minute, range 0..60 (UTC)
11	X1	valid	-	-	Validity flags
bit 0	U <sub>1</sub>	validDate	-	-	1 = valid UTC Date (see section Time validity in <a href="#">Integration manual</a> for details)
bit 1	U <sub>1</sub>	validTime	-	-	1 = valid UTC time of day (see section Time validity in <a href="#">Integration manual</a> for details)
bit 2	U <sub>1</sub>	fullyResolved	-	-	1 = UTC time of day has been fully resolved (no seconds uncertainty). Cannot be used to check if time is completely solved.
bit 3	U <sub>1</sub>	validMag	-	-	1 = valid magnetic declination
12	U4	tAcc	-	ns	Time accuracy estimate (UTC)
16	I4	nano	-	ns	Fraction of second, range -1e9 .. 1e9 (UTC)
20	U1	fixType	-	-	GNSSfix Type: <ul style="list-style-type: none"> <li>• 0 = no fix</li> <li>• 1 = dead reckoning only</li> <li>• 2 = 2D-fix</li> <li>• 3 = 3D-fix</li> <li>• 4 = GNSS + dead reckoning combined</li> <li>• 5 = time only fix</li> </ul>
21	X1	flags	-	-	Fix status flags
bit 0	U <sub>1</sub>	gnssFixOK	-	-	1 = valid fix (i.e within DOP & accuracy masks)
bit 1	U <sub>1</sub>	diffSoln	-	-	1 = differential corrections were applied
bits 4...2	U <sub>3</sub>	psmState	-	-	Power save mode state (see Power management section in <a href="#">Integration Manual</a> for details).

					<ul style="list-style-type: none"> <li>• 0 = PSM is not active</li> <li>• 1 = Enabled (an intermediate state before Acquisition state)</li> <li>• 2 = Acquisition</li> <li>• 3 = Tracking</li> <li>• 4 = Power Optimized Tracking</li> <li>• 5 = Inactive</li> </ul>	
	bit 5	U:1	headVehValid	-	-	1 = heading of vehicle is valid, only set if the receiver is in sensor fusion mode
	bits 7...6	U:2	carrSoln	-	-	Carrier phase range solution status: <ul style="list-style-type: none"> <li>• 0 = no carrier phase range solution</li> <li>• 1 = carrier phase range solution with floating ambiguities</li> <li>• 2 = carrier phase range solution with fixed ambiguities</li> </ul> (not supported for protocol versions less than 20.00)
22		X1	flags2	-	-	Additional flags
	bit 5	U:1	confirmedAvai	-	-	1 = information about UTC Date and Time of Day validity confirmation is available (see section Time validity in <a href="#">Integration manual</a> for details)  This flag is only supported in <a href="#">Protocol Versions 19.00, 19.10, 20.10, 20.20, 20.30, 22.00, 23.00, 23.01, 27 and 28</a> .
	bit 6	U:1	confirmedDate	-	-	1 = UTC Date validity could be confirmed (see section Time validity in <a href="#">Integration manual</a> for details)
	bit 7	U:1	confirmedTime	-	-	1 = UTC Time of Day could be confirmed (see section Time validity in <a href="#">Integration manual</a> for details)
23		U1	numSV	-	-	Number of satellites used in Nav Solution
24		I4	lon	1e-7	deg	Longitude
28		I4	lat	1e-7	deg	Latitude
32		I4	height	-	mm	Height above ellipsoid
36		I4	hMSL	-	mm	Height above mean sea level
40		U4	hAcc	-	mm	Horizontal accuracy estimate
44		U4	vAcc	-	mm	Vertical accuracy estimate
48		I4	velN	-	mm/s	NED north velocity
52		I4	velE	-	mm/s	NED east velocity
56		I4	velD	-	mm/s	NED down velocity
60		I4	gSpeed	-	mm/s	Ground Speed (2-D)

<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U4	SOW	-	s	BDS time of week (rounded to seconds)	
8	I4	fSOW	-	ns	Fractional part of SOW (range: +/-500000000). The precise BDS time of week in seconds is: $SOW + fSOW * 1e-9$	
12	I2	week	-	-	BDS week number of the navigation epoch	
14	I1	leapS	-	s	BDS leap seconds (BDS-UTC)	
15	X1	valid	-	-	Validity Flags	
	bit 0	U:1	sowValid	-	-	1 = Valid SOW and fSOW (see section Time validity in <a href="#">Integration manual</a> for details)
	bit 1	U:1	weekValid	-	-	1 = Valid week (see section Time validity in <a href="#">Integration manual</a> for details)
	bit 2	U:1	leapSValid	-	-	1 = Valid leap second
16	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.15.18 UBX-NAV-TIMEGAL (0x01 0x25)

#### 3.15.18.1 Galileo time solution

<b>Message</b>	<b>UBX-NAV-TIMEGAL</b>				
	<b>Galileo time solution</b>				
<i>Type</i>	Periodic/pollled				
<i>Comment</i>	This message reports the precise Galileo time of the most recent navigation solution including validity flags and an accuracy estimate.				
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>
	0xb5 0x62	0x01	0x25	20	see below
					CK_A CK_B
<i>Payload description:</i>					

Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U4	galTow	-	s	Galileo time of week (rounded to seconds)	
8	I4	fGalTow	-	ns	Fractional part of the Galileo time of week (range: +/-500000000). The precise Galileo time of week in seconds is: $galTow + fGalTow * 1e-9$	
12	I2	galWno	-	-	Galileo week number	
14	I1	leapS	-	s	Galileo leap seconds (Galileo-UTC)	
15	X1	valid	-	-	Validity Flags	
	bit 0	U:1	galTowValid	-	-	1 = Valid galTow and fGalTow (see the section Time validity in the <a href="#">Integration manual</a> for details)
	bit 1	U:1	galWnoValid	-	-	1 = Valid galWno (see the section Time validity in the <a href="#">Integration manual</a> for details)
	bit 2	U:1	leapSValid	-	-	1 = Valid leapS
16	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.15.19 UBX-NAV-TIMEGLO (0x01 0x23)

#### 3.15.19.1 GLONASS time solution

Message	UBX-NAV-TIMEGLO GLONASS time solution					
Type	Periodic/pollled					
Comment	This message reports the precise GLO time of the most recent navigation solution including validity flags and an accuracy estimate.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x23	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U4	TOD	-	s	GLONASS time of day (rounded to integer seconds)	
8	I4	fTOD	-	ns	Fractional part of TOD (range: +/-500000000). The precise GLONASS time of day in seconds is: $TOD + fTOD * 1e-9$	
12	U2	Nt	-	days	Current date (range: 1-1461), starting at 1 from the 1st Jan of the year indicated by N4 and ending at 1461 at the 31st Dec of the third year after that indicated by N4	
14	U1	N4	-	-	Four-year interval number starting from 1996 (1=1996, 2=2000, 3=2004...)	
15	X1	valid	-	-	Validity flags	
	bit 0	U:1	todValid	-	-	1 = Valid TOD and fTOD (see section Time validity in <a href="#">Integration manual</a> for details)

bit 1	U:1	dateValid	-	-	1 = Valid N4 and Nt (see section Time validity in <a href="#">Integration manual</a> for details)
16	U4	tAcc	-	ns	Time Accuracy Estimate

### 3.15.20 UBX-NAV-TIMEGPS (0x01 0x20)

#### 3.15.20.1 GPS time solution

<b>Message</b>	<b>UBX-NAV-TIMEGPS</b>					
	<b>GPS time solution</b>					
Type	Periodic/pollled					
Comment	This message reports the precise GPS time of the most recent navigation solution including validity flags and an accuracy estimate.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x20	16	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	I4	fTOW	-	ns	Fractional part of iTOW (range: +/-500000). The precise GPS time of week in seconds is: $(iTOW * 1e-3) + (fTOW * 1e-9)$	
8	I2	week	-	-	GPS week number of the navigation epoch	
10	I1	leapS	-	s	GPS leap seconds (GPS-UTC)	
11	X1	valid	-	-	Validity Flags	
	bit 0	U:1	towValid	-	-	1 = Valid GPS time of week (iTOW & fTOW, (see section Time validity in <a href="#">Integration manual</a> for details)
	bit 1	U:1	weekValid	-	-	1 = Valid GPS week number (see section Time validity in <a href="#">Integration manual</a> for details)
	bit 2	U:1	leapSValid	-	-	1 = Valid GPS leap seconds
12	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.15.21 UBX-NAV-TIMELS (0x01 0x26)

#### 3.15.21.1 Leap second event information

<b>Message</b>	<b>UBX-NAV-TIMELS</b>					
	<b>Leap second event information</b>					
Type	Periodic/pollled					
Comment	Information about the upcoming leap second event if one is scheduled.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x26	24	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U1	version	-	-	Message version (0x00 for this version)	

5	U1[3]	reserved0	-	-	Reserved

<i>Type</i>	Periodic/pollled

*Comment* See important comments concerning validity of position given in section Navigation output filters in [Integration manual](#).

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x01	0x12	36	see below	CK_A CK_B

*Payload description:*

Byte offset	Type	Name	Scale	Unit	Description
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.
4	I4	velN	-	cm/s	North velocity component
8	I4	velE	-	cm/s	East velocity component
12	I4	velD	-	cm/s	Down velocity component
16	U4	speed	-	cm/s	Speed (3-D)
20	U4	gSpeed	-	cm/s	Ground speed (2-D)
24	I4	heading	1e-5	deg	Heading of motion 2-D
28	U4	sAcc	-	cm/s	Speed accuracy Estimate
32	U4	cAcc	1e-5	deg	Course / Heading accuracy estimate

### 3.16 UBX-NAV2 (0x29)

The messages in the UBX-NAV2 class are used to output navigation results and data, such as position, altitude and velocity in a number of formats, and status flags and accuracy estimate figures, or satellite and signal information. The messages are generated with the configured navigation rate.

#### 3.16.1 UBX-NAV2-CLOCK (0x29 0x22)

### 3.16.1.1 Clock solution

<b>Message</b>		<b>UBX-NAV2-CLOCK</b>				
		<b>Clock solution</b>				
Type	Periodic/pollled					
Comment						
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x22	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section Navigation epochs in <a href="#">Integration manual</a> for details. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	I4	clkB	-	ns	Clock bias	
8	I4	clkD	-	ns/s	Clock drift	
12	U4	tAcc	-	ns	Time accuracy estimate	
16	U4	fAcc	-	ps/s	Frequency accuracy estimate	

### 3.16.2 UBX-NAV2-COV (0x29 0x36)

#### 3.16.2.1 Covariance matrices

<b>Message</b>		<b>UBX-NAV2-COV</b>				
		<b>Covariance matrices</b>				
Type	Periodic/pollled					
Comment	This message outputs the covariance matrices for the position and velocity solutions in the topocentric coordinate system defined as the local-level North (N), East (E), Down (D) frame. As the covariance matrices are symmetric, only the upper triangular part is output.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x36	64	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description

14	U2	nDOP	0.01	-	Northing DOP	
16	U2	eDOP	0.01	-	Easting DOP	

### 3.16.4 UBX-NAV2-EOE (0x29 0x61)

#### 3.16.4.1 End of epoch

<b>Message</b>	<b>UBX-NAV2-EOE</b>					
	<b>End of epoch</b>					
<b>Type</b>	Periodic					
<b>Comment</b>	This message is intended to be used as a marker to collect all navigation messages of an epoch. It is output after all enabled NAV class messages (except UBX-NAV-HNR) and after all enabled NMEA messages.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x61	4	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.
---	----	------	---	----	---

### 3.16.5 UBX-NAV2-ODO (0x29 0x09)

#### 3.16.5.1 Odometer solution

<b>Message</b>	<b>UBX-NAV2-ODO</b>					
	<b>Odometer solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message outputs the traveled distance since last reset (see <a href="#">UBX-NAV-RESETODO</a> ) together with an associated estimated accuracy and the total cumulated ground distance (can only be reset by a cold start of the receiver).					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x09	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1[3]	reserved0	-	-	<a href="#">Reserved</a>	
4	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
8	U4	distance	-	m	Ground distance since last reset	
12	U4	totalDistance	-	m	Total cumulative ground distance	
16	U4	distanceStd	-	m	Ground distance accuracy (1-sigma)	

### 3.16.6 UBX-NAV2-POSECEF (0x29 0x01)

#### 3.16.6.1 Position solution in ECEF

<b>Message</b>	<b>UBX-NAV2-POSECEF</b>					
	<b>Position solution in ECEF</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	See important comments concerning validity of position given in section Navigation output filters in <a href="#">Integration manual</a> .					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x01	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	I4	ecefX	-	cm	ECEF X coordinate	
8	I4	ecefY	-	cm	ECEF Y coordinate	
12	I4	ecefZ	-	cm	ECEF Z coordinate	
16	U4	pAcc	-	cm	Position Accuracy Estimate	

### 3.16.7 UBX-NAV2-POSLLH (0x29 0x02)

### 3.16.7.1 Geodetic position solution

<b>Message</b>	<b>UBX-NAV2-POSLLH</b>					
	<b>Geodetic position solution</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	See important comments concerning validity of position given in section Navigation output filters in <a href="#">Integration manual</a> . This message outputs the Geodetic position in the currently selected ellipsoid. The default is the WGS84 Ellipsoid, but can be changed with the message <a href="#">CFG-NAVSPG-USE_USRDAT</a> .					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x02	28	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	I4	lon	1e-7	deg	Longitude	
8	I4	lat	1e-7	deg	Latitude	
12	I4	height	-	mm	Height above ellipsoid	
16	I4	hMSL	-	mm	Height above mean sea level	
20	U4	hAcc	-	mm	Horizontal accuracy estimate	
24	U4	vAcc	-	mm	Vertical accuracy estimate	

### 3.16.8 UBX-NAV2-PVT (0x29 0x07)

#### 3.16.8.1 Navigation position velocity time solution

<b>Message</b>	<b>UBX-NAV2-PVT</b>					
	<b>Navigation position velocity time solution</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message combines position, velocity and time solution, including accuracy figures. Note that during a leap second there may be more or less than 60 seconds in a minute. See the description of leap seconds in the <a href="#">Integration manual</a> for details.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x07	92	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U2	year	-	y	Year (UTC)	
6	U1	month	-	month	Month, range 1..12 (UTC)	
7	U1	day	-	d	Day of month, range 1..31 (UTC)	
8	U1	hour	-	h	Hour of day, range 0..23 (UTC)	
9	U1	min	-	min	Minute of hour, range 0..59 (UTC)	
10	U1	sec	-	s	Seconds of minute, range 0..60 (UTC)	
11	X1	valid	-	-	Validity flags	

bit 0	U:1	validDate	-	-	1 = valid UTC Date (see section Time validity in <a href="#">Integration manual</a> for details)
bit 1	U:1	validTime	-	-	1 = valid UTC time of day (see section Time validity in <a href="#">Integration manual</a> for details)
bit 2	U:1	fullyResolved	-	-	1 = UTC time of day has been fully resolved (no seconds uncertainty). Cannot be used to check if time is completely solved.
bit 3	U:1	validMag	-	-	1 = valid magnetic declination
12	U4	tAcc	-	ns	Time accuracy estimate (UTC)
16	I4	nano	-	ns	Fraction of second, range -1e9 .. 1e9 (UTC)
20	U1	fixType	-	-	GNSSfix Type: <ul style="list-style-type: none"> <li>• 0 = no fix</li> <li>• 1 = dead reckoning only</li> <li>• 2 = 2D-fix</li> <li>• 3 = 3D-fix</li> <li>• 4 = GNSS + dead reckoning combined</li> <li>• 5 = time only fix</li> </ul>
21	X1	flags	-	-	Fix status flags
bit 0	U:1	gnssFixOK	-	-	1 = valid fix (i.e within DOP & accuracy masks)
bit 1	U:1	diffSoln	-	-	1 = differential corrections were applied
bits 4...2	U:3	psmState	-	-	Power save mode state (see Power management section in <a href="#">Integration Manual</a> for details). <ul style="list-style-type: none"> <li>• 0 = PSM is not active</li> <li>• 1 = Enabled (an intermediate state before Acquisition state)</li> <li>• 2 = Acquisition</li> <li>• 3 = Tracking</li> <li>• 4 = Power Optimized Tracking</li> <li>• 5 = Inactive</li> </ul>
bit 5	U:1	headVehValid	-	-	1 = heading of vehicle is valid, only set if the receiver is in sensor fusion mode
bits 7...6	U:2	carrSoln	-	-	Carrier phase range solution status: <ul style="list-style-type: none"> <li>• 0 = no carrier phase range solution</li> <li>• 1 = carrier phase range solution with floating ambiguities</li> <li>• 2 = carrier phase range solution with fixed ambiguities</li> </ul> (not supported for protocol versions less than 20.00)
22	X1	flags2	-	-	Additional flags
bit 5	U:1	confirmedAvai	-	-	1 = information about UTC Date and Time of Day validity confirmation is available (see section Time validity in <a href="#">Integration manual</a> for details)  This flag is only supported in <a href="#">Protocol Versions 19.00, 19.10, 20.10, 20.20, 20.30, 22.00, 23.00, 23.01, 27 and 28.</a>
bit 6	U:1	confirmedDate	-	-	1 = UTC Date validity could be confirmed (see section Time validity in <a href="#">Integration manual</a> for details)
bit 7	U:1	confirmedTime	-	-	1 = UTC Time of Day could be confirmed (see section Time validity in <a href="#">Integration manual</a> for details)
23	U1	numSV	-	-	Number of satellites used in Nav Solution
24	I4	lon	1e-7	deg	Longitude

28	I4	lat	1e-7	deg	Latitude	
32	I4	height	-	mm	Height above ellipsoid	
36	I4	hMSL	-	mm	Height above mean sea level	
40	U4	hAcc	-	mm	Horizontal accuracy estimate	
44	U4	vAcc	-	mm	Vertical accuracy estimate	
48	I4	velN	-	mm/s	NED north velocity	
52	I4	velE	-	mm/s	NED east velocity	
56	I4	velD	-	mm/s	NED down velocity	
60	I4	gSpeed	-	mm/s	Ground Speed (2-D)	
64	I4	headMot	1e-5	deg	Heading of motion (2-D)	
68	U4	sAcc	-	mm/s	Speed accuracy estimate	
72	U4	headAcc	1e-5	deg	Heading accuracy estimate (both motion and vehicle)	
76	U2	pDOP	0.01	-	Position DOP	
78	X2	flags3	-	-	Additional flags	
	bit 0	U:1	invalidLlh	-	-	1 = Invalid lon, lat, height and hMSL
	bits 4...1	U:4	lastCorrection Age	-	-	Age of the most recently received differential correction: <ul style="list-style-type: none"> <li>• 0 = Not available</li> <li>• 1 = Age between 0 and 1 second</li> <li>• 2 = Age between 1 (inclusive) and 2 seconds</li> <li>• 3 = Age between 2 (inclusive) and 5 seconds</li> <li>• 4 = Age between 5 (inclusive) and 10 seconds</li> <li>• 5 = Age between 10 (inclusive) and 15 seconds</li> <li>• 6 = Age between 15 (inclusive) and 20 seconds</li> <li>• 7 = Age between 20 (inclusive) and 30 seconds</li> <li>• 8 = Age between 30 (inclusive) and 45 seconds</li> <li>• 9 = Age between 45 (inclusive) and 60 seconds</li> <li>• 10 = Age between 60 (inclusive) and 90 seconds</li> <li>• 11 = Age between 90 (inclusive) and 120 seconds</li> <li>• &gt;=12 = Age greater or equal than 120 seconds</li> </ul>
80	U1[4]	reserved0	-	-	<b>Reserved</b>	
84	I4	headVeh	1e-5	deg	Heading of vehicle (2-D), this is only valid when headVehValid is set, otherwise the output is set to the heading of motion	
88	I2	magDec	1e-2	deg	Magnetic declination. Only supported in ADR 4.10 and later.	
90	U2	magAcc	1e-2	deg	Magnetic declination accuracy. Only supported in ADR 4.10 and later.	

### 3.16.9 UBX-NAV2-SAT (0x29 0x35)

#### 3.16.9.1 Satellite information

<b>Message</b>	<b>UBX-NAV2-SAT</b> <b>Satellite information</b>
<b>Type</b>	Periodic/pollled
<b>Comment</b>	This message displays information about SVs that are either known to be visible or currently tracked by the receiver. All signal related information corresponds to the subset of signals specified in <a href="#">Signal Identifiers</a> .

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x35	8 + numSvs·12	see below	CK_A CK_B
<i>Payload description:</i>

### 3.16.12 UBX-NAV2-STATUS (0x29 0x03)

### 3.16.12.1 Receiver navigation status

<b>Message</b>		<b>UBX-NAV2-STATUS</b>				
		<b>Receiver navigation status</b>				
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	See important comments concerning validity of position given in section Navigation output filters in <a href="#">Integration manual</a> .					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x03	16	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U1	gpsFix	-	-	GPSfix Type, this value does <b>not</b> qualify a fix as valid and within the limits. See note on flag gpsFixOk below. <ul style="list-style-type: none"> <li>• 0x00 = no fix</li> <li>• 0x01 = dead reckoning only</li> <li>• 0x02 = 2D-fix</li> <li>• 0x03 = 3D-fix</li> <li>• 0x04 = GPS + dead reckoning combined</li> <li>• 0x05 = Time only fix</li> <li>• 0x06..0xff = reserved</li> </ul>	
5	X1	flags	-	-	Navigation Status Flags	
bit 0	U:1	gpsFixOk	-	-	1 = position and velocity valid and within DOP and ACC Masks.	
bit 1	U:1	diffSoln	-	-	1 = differential corrections were applied	
bit 2	U:1	wknSet	-	-	1 = Week Number valid (see section Time validity in <a href="#">Integration manual</a> for details)	
bit 3	U:1	towSet	-	-	1 = Time of Week valid (see section Time validity in <a href="#">Integration manual</a> for details)	
6	X1	fixStat	-	-	Fix Status Information	
bit 0	U:1	diffCorr	-	-	1 = differential corrections available	
bit 1	U:1	carrSolnValid	-	-	1 = valid carrSoln	
bits 7...6	U:2	mapMatching	-	-	map matching status: <ul style="list-style-type: none"> <li>• 00: none</li> <li>• 01: valid but not used, i.e. map matching data was received, but was too old</li> <li>• 10: valid and used, map matching data was applied</li> <li>• 11: valid and used, map matching data was applied. In case of sensor unavailability map matching data enables dead reckoning. This requires map matched latitude/longitude or heading data.</li> </ul>	
7	X1	flags2	-	-	further information about navigation output	
bits 1...0	U:2	psmState	-	-	power save mode state (not supported for protocol versions less than 13.01) <ul style="list-style-type: none"> <li>• 0 = ACQUISITION [or when psm disabled]</li> <li>• 1 = TRACKING</li> <li>• 2 = POWER OPTIMIZED TRACKING</li> <li>• 3 = INACTIVE</li> </ul>	

bits 4...3	U:2	spooofDetState	-	-	Spoofing detection state (not supported for protocol versions less than 18.00) <ul style="list-style-type: none"> <li>0: Unknown or deactivated</li> <li>1: No spoofing indicated</li> <li>2: Spoofing indicated</li> <li>3: Multiple spoofing indications</li> </ul> Note that the spoofing state value only reflects the detector state for the current navigation epoch. As spoofing can be detected most easily at the transition from real signal to spoofing signal, this is also where the detector is triggered the most. I.e. a value of 1 - <i>No spoofing indicated</i> does not mean that the receiver is not spoofed, it simply states that the detector was not triggered in this epoch.
bits 7...6	U:2	carrSoln	-	-	Carrier phase range solution status: <ul style="list-style-type: none"> <li>0 = no carrier phase range solution</li> <li>1 = carrier phase range solution with floating ambiguities</li> <li>2 = carrier phase range solution with fixed ambiguities</li> </ul>
8	U4	ttff	-	ms	Time to first fix (millisecond time tag)
12	U4	msss	-	ms	Milliseconds since Startup / Reset

### 3.16.13 UBX-NAV2-TIMEBDS (0x29 0x24)

#### 3.16.13.1 BeiDou time solution

<b>Message</b>	<b>UBX-NAV2-TIMEBDS</b>					
	<b>BeiDou time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise BDS time of the most recent navigation solution including validity flags and an accuracy estimate.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x24	20	see below	CK_A CK_B
<b>Payload description:</b>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U4	SOW	-	s	BDS time of week (rounded to seconds)	
8	I4	fSOW	-	ns	Fractional part of SOW (range: +/-500000000). The precise BDS time of week in seconds is: $SOW + fSOW * 1e-9$	
12	I2	week	-	-	BDS week number of the navigation epoch	
14	I1	leapS	-	s	BDS leap seconds (BDS-UTC)	
15	X1	valid	-	-	Validity Flags	
bit 0	U:1	sowValid	-	-	1 = Valid SOW and fSOW (see section Time validity in <a href="#">Integration manual</a> for details)	
bit 1	U:1	weekValid	-	-	1 = Valid week (see section Time validity in <a href="#">Integration manual</a> for details)	
bit 2	U:1	leapSValid	-	-	1 = Valid leap second	

16	U4	tAcc	-	ns	Time Accuracy Estimate
----	----	------	---	----	------------------------

### 3.16.14 UBX-NAV2-TIMEGAL (0x29 0x25)

#### 3.16.14.1 Galileo time solution

<b>Message</b>	<b>UBX-NAV2-TIMEGAL</b>					
	<b>Galileo time solution</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	This message reports the precise Galileo time of the most recent navigation solution including validity flags and an accuracy estimate.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	
	0xb5 0x62	0x29	0x25	20	see below

	bit 2	U:1	leapSValid	-	-	1 = Valid GPS leap seconds
12	U4	tAcc	-	ns	Time Accuracy Estimate	

### 3.16.17 UBX-NAV2-TIMELS (0x29 0x26)

### 3.16.17.1 Leap second event information

<b>Message</b>		<b>UBX-NAV2-TIMELS</b>				
		<b>Leap second event information</b>				
<i>Type</i>	Periodic/polled					
<i>Comment</i>	Information about the upcoming leap second event if one is scheduled.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x29	0x26	24	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See the section iTOW timestamps in <a href="#">Integration manual</a> for details.	
4	U1	version	-	-	Message version (0x00 for this version)	
5	U1[3]	reserved0	-	-	<a href="#">Reserved</a>	
8	U1	srcOfCurrLs	-	-	Information source for the current number of leap seconds. <ul style="list-style-type: none"> <li>• 0 = Default (hardcoded in the firmware, can be outdated)</li> <li>• 1 = Derived from time difference between GPS and GLONASS time</li> <li>• 2 = GPS</li> <li>• 3 = SBAS</li> <li>• 4 = BeiDou</li> <li>• 5 = Galileo</li> <li>• 6 = Aided data</li> <li>• 7 = Configured</li> <li>• 8 = NavIC</li> <li>• 255 = Unknown</li> </ul>	
9	I1	currLs	-	s	Current number of leap seconds since start of GPS time (Jan 6, 1980). It reflects how much GPS time is ahead of UTC time. Galileo number of leap seconds is the same as GPS. BeiDou number of leap seconds is 14 less than GPS. GLONASS follows UTC time, so no leap seconds.	
10	U1	srcOfLsChange	-	-	Information source for the future leap second event. <ul style="list-style-type: none"> <li>• 0 = No source</li> <li>• 2 = GPS</li> <li>• 3 = SBAS</li> <li>• 4 = BeiDou</li> <li>• 5 = Galileo</li> <li>• 6 = GLONASS</li> <li>• 7 = IRNSS</li> </ul>	
11	I1	lsChange	-	s	Future leap second change if one is scheduled. +1 = positive leap second, -1 = negative leap second, 0 = no future leap second event scheduled or no information available.	
12	I4	timeToLsEvent	-	s	Number of seconds until the next leap second event, or from the last leap second event if no future event scheduled. If > 0 event is in the future, = 0 event is now, < 0 event is in the past. Valid only if validTimeToLsEvent = 1.	

16	U2	dateOfLsGps Wn	-	-	GPS week number (WN) of the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1.	
18	U2	dateOfLsGps Dn	-	-	GPS day of week number (DN) for the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1. (GPS and Galileo DN: from 1 = Sun to 7 = Sat. BeiDou DN: from 0 = Sun to 6 = Sat.)	
20	U1[3]	reserved1	-	-	Reserved	
23	X1	valid	-	-	Validity flags	
	bit 0	U <sub>1</sub>	validCurrLs	-	-	1 = Valid current number of leap seconds value.
	bit 1	U <sub>1</sub>	validTimeToLs Event	-	-	1 = Valid time to next leap second event or from the last leap second event if no future event scheduled.

### 3.16.18 UBX-NAV2-TIMEUTC (0x29 0x21)

#### 3.16.18.1 UTC time solution

Message	UBX-NAV2-TIMEUTC UTC time solution					
Type	Periodic/pollled					
Comment	Note that during a leap second there may be more or less than 60 seconds in a minute. See the description of leap seconds in the <a href="#">Integration manual</a> for details.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x29	0x21	20	see below	CK_A CK_B
Payload description:						
Byte offset	Type	Name	Scale	Unit	Description

28	U4	sAcc	-	cm/s	Speed accuracy Estimate
32	U4	cAcc	1e-5	deg	Course / Heading accuracy estimate

## 3.17 UBX-RXM (0x02)

The messages in the UBX-RXM class are used to output status and result data from the receiver manager as well as sending commands to the receiver manager.

### 3.17.1 UBX-RXM-MEASX (0x02 0x14)

#### 3.17.1.1 Satellite measurements for RRLP

Message	UBX-RXM-MEASX					
	Satellite measurements for RRLP					
Type	Periodic/pollled					
<i>Comment</i>	The message payload data is, where possible and appropriate, according to the Radio Resource LCS (Location Services) Protocol (RRLP) [1]. One exception is the satellite and GNSS IDs, which here are given according to the <a href="#">Satellite Numbering</a> scheme. The correct satellites have to be selected and their satellite ID translated accordingly [1, tab. A.10.14] for use in a RRLP Measure Position Response Component. Similarly, the measurement reference time of week has to be forwarded correctly (modulo 14400000 for the 24 LSB GPS measurements variant, modulo 3600000 for the 22 LSB Galileo and Additional Navigation Satellite Systems (GANSS) measurements variant) of the RRLP measure position response to the SMLC. Reference: [1] ETSI TS 144 031 V11.0.0 (2012-10), Digital cellular telecommunications system (Phase 2+), Location Services (LCS), Mobile Station (MS) - Serving Mobile Location Centre (SMLC), Radio Resource LCS Protocol (RRLP), (3GPP TS 44.031 version 11.0.0 Release 11).

### 3.17.2 UBX-RXM-PMREQ (0x02 0x41)

#### 3.17.2.1 Power management request

<b>Message</b>	<b>UBX-RXM-PMREQ</b> <b>Power management request</b>					
Type	Command					
Comment	This message requests a power management related task of the receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x41	8	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U4	duration	-	ms	Duration of the requested task, set to zero for infinite duration. The maximum supported time is 12 days.	
4	X4	flags	-	-	task flags	
	bit 1	U:1	backup	-	-	The receiver goes into backup mode for a time period defined by duration, provided that it is not connected to USB

#### 3.17.2.2 Power management request

<b>Message</b>	<b>UBX-RXM-PMREQ</b> <b>Power management request</b>					
Type	Command					
Comment	This message requests a power management related task of the receiver.					

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x41	16	see below	CK_A CK_B

*Payload description:*

Byte offset	Type	Name	Scale	Unit	Description
0	U1	version	-	-	Message version (0x00 for this version)
1	U1[3]	reserved0	-	-	Reserved
4	U4	duration	-	ms	Duration of the requested task, set to zero for infinite duration. The maximum supported time is 12 days.
8	X4	flags	-	-	task flags
bit 1	U:1	backup	-	-	The receiver goes into backup mode for a time period defined by duration, provided that it is not connected to USB
bit 2	U:1	force	-	-	Force receiver backup while USB is connected. USB interface will be disabled.
12	X4	wakeupSources	-	-	Configure pins to wake up the receiver. The receiver wakes up if there is either a falling or a rising edge on one of the configured pins.
bit 3	U:1	uartrx	-	-	Wake up the receiver if there is an edge on the UART RX pin
bit 5	U:1	extint0	-	-	Wake up the receiver if there is an edge on the EXTINT0 pin
bit 6	U:1	extint1	-	-	Wake up the receiver if there is an edge on the EXTINT1 pin
bit 7	U:1	spics	-	-	Wake up the receiver if there is an edge on the SPI CS pin

### 3.17.3 UBX-RXM-RAWX (0x02 0x15)

#### 3.17.3.1 Multi-GNSS raw measurements

Message	UBX-RXM-RAWX Multi-GNSS raw measurements					
Type	Periodic/pollled					
Comment	<p>This message contains the information needed to be able to generate a RINEX 3 multi-GNSS observation file (see <a href="ftp://ftp.igs.org/pub/data/format/">ftp://ftp.igs.org/pub/data/format/</a>).</p> <p>This message contains pseudorange, Doppler, carrier phase, phase lock and signal quality information for GNSS satellites once signals have been synchronized. This message supports all active GNSS.</p> <p>The only difference between this version of the message and the previous version (<b>UBX-RXM-RAWX-DATA0</b>) is the addition of the version field.</p>					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x15	16 + numMeas*32	see below	CK_A CK_B

*Payload description:*

Byte offset	Type	Name	Scale	Unit	Description
-------------	------	------	-------	------	-------------

0	R8	rcvTow	-	s	Measurement time of week in receiver local time approximately aligned to the GPS time system. The receiver local time of week, week number and leap second information can be used to translate the time to other time systems. More information about the difference in time systems can be found in the RINEX 3 format documentation. For a receiver operating in GLONASS only mode, UTC time can be determined by subtracting the leapS field from GPS time regardless of whether the GPS leap seconds are valid.	
8	U2	week	-	weeks	GPS week number in receiver local time.	
10	I1	leapS	-	s	GPS leap seconds (GPS-UTC). This field represents the receiver's best knowledge of the leap seconds offset. A flag is given in the recStat bitfield to indicate if the leap seconds are known.	
11	U1	numMeas	-	-	Number of measurements to follow	
12	X1	recStat	-	-	Receiver tracking status bitfield	
	bit 0	U <sub>:1</sub>	leapSec	-	-	Leap seconds have been determined
	bit 1	U <sub>:1</sub>	clkReset	-	-	Clock reset applied. Typically the receiver clock is changed in increments of integer milliseconds.
13	U1	version	-	-	Message version (0x01 for this version)	
14	U1[2]	reserved0	-	-	<a href="#">Reserved</a>	
<i>Start of repeated group (numMeas times)</i>						
16 + n·32	R8	prMes	-	m	Pseudorange measurement [m]. GLONASS inter frequency channel delays are compensated with an internal calibration table.	
24 + n·32	R8	cpMes	-	cycles	Carrier phase measurement [cycles]. The carrier phase initial ambiguity is initialized using an approximate value to make the magnitude of the phase close to the pseudorange measurement. Clock resets are applied to both phase and code measurements in accordance with the RINEX specification.	
32 + n·32	R4	doMes	-	Hz	Doppler measurement (positive sign for approaching satellites) [Hz]	
36 + n·32	U1	gnssId	-	-	GNSS identifier (see <a href="#">Satellite Numbering</a> for a list of identifiers)	
37 + n·32	U1	svId	-	-	Satellite identifier (see <a href="#">Satellite Numbering</a> )	
38 + n·32	U1	sigId	-	-	New style signal identifier (see <a href="#">Signal Identifiers</a> ). (not supported for protocol versions less than 27.00)	
39 + n·32	U1	freqId	-	-	Only used for GLONASS: This is the frequency slot + 7 (range from 0 to 13)	
40 + n·32	U2	locktime	-	ms	Carrier phase locktime counter (maximum 64500ms)	
42 + n·32	U1	cno	-	dBHz	Carrier-to-noise density ratio (signal strength) [dB-Hz]	
43 + n·32	X1	prStdev	0.01*2 <sup>n</sup>	m	Estimated pseudorange measurement standard deviation	
	bits 3...0	U <sub>:4</sub>	prStd	-	-	Estimated pseudorange standard deviation
44 + n·32	X1	cpStdev	0.004	cycles	Estimated carrier phase measurement standard deviation (note a raw value of 0x0F indicates the value is invalid)	
	bits 3...0	U <sub>:4</sub>	cpStd	-	-	Estimated carrier phase standard deviation

45 + n·32	X1	doStdDev	0.002*2 <sup>n</sup> Hz		Estimated Doppler measurement standard deviation.
bits 3...0	U <sub>4</sub>	doStd	-	-	Estimated Doppler standard deviation
46 + n·32	X1	trkStat	-	-	Tracking status bitfield
bit 0	U <sub>1</sub>	prValid	-	-	Pseudorange valid
bit 1	U <sub>1</sub>	cpValid	-	-	Carrier phase valid
bit 2	U <sub>1</sub>	halfCyc	-	-	Half cycle valid
bit 3	U <sub>1</sub>	subHalfCyc	-	-	Half cycle subtracted from phase
47 + n·32	U1	reserved1	-	-	<a href="#">Reserved</a>

*End of repeated group (numMeas times)*

### 3.17.4 UBX-RXM-RLM (0x02 0x59)

#### 3.17.4.1 Galileo SAR short-RLM report

<b>Message</b>	<b>UBX-RXM-RLM</b>					
	<b>Galileo SAR short-RLM report</b>					
<b>Type</b>	Output					
<b>Comment</b>	This message contains the contents of any Galileo Search and Rescue (SAR) Short Return Link Message detected by the receiver.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x02	0x59	16	<i>see below</i>	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	type	-	-	Message type (0x01 for Short-RLM)	
2	U1	svId	-	-	Identifier of transmitting satellite (see <a href="#">Satellite Numbering</a> )	
3	U1	reserved0	-	-	<a href="#">Reserved</a>	
4	U1[8]	beacon	-	-	Beacon identifier (60 bits), with bytes ordered by earliest transmitted (most significant) first. Top four bits of first byte are zero.	
12	U1	message	-	-	Message code (4 bits)	
13	U1[2]	params	-	-	Parameters (16 bits), with bytes ordered by earliest transmitted (most significant) first.	
15	U1	reserved1	-	-	<a href="#">Reserved</a>	

#### 3.17.4.2 Galileo SAR long-RLM report

<b>Message</b>	<b>UBX-RXM-RLM</b>					
	<b>Galileo SAR long-RLM report</b>					
<b>Type</b>	Output					
<b>Comment</b>	This message contains the contents of any Galileo Search and Rescue (SAR) Long Return Link Message detected by the receiver.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

0	U1	version	-	-	Message version (0x00 for this version)	

1	U1	type	-	-	Message type (0x02 for Long-RLM)
2	U1	svId	-	-	Identifier of transmitting satellite (see <a href="#">Satellite Numbering</a> )
3	U1	reserved0	-	-	<a href="#">Reserved</a>
4	U1[8]	beacon	-	-	Beacon identifier (60 bits), with bytes ordered by earliest transmitted (most significant) first. Top four bits of first byte are zero.
12	U1	message	-	-	Message code (4 bits)
13	U1[12]	params	-	-	Parameters (96 bits), with bytes ordered by earliest transmitted (most significant) first.
25	U1[3]	reserved1	-	-	<a href="#">Reserved</a>

### 3.17.5 UBX-RXM-RTCM (0x02 0x32)

#### 3.17.5.1 RTCM input status

<b>Message</b>		<b>UBX-RXM-RTCM RTCM input status</b>				
Type	Output					
Comment	This message shows info on a received RTCM input message. It is output upon successful parsing of an RTCM input message, irrespective of whether the RTCM message is supported or not by the receiver.					
Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x02	0x32	8	see below	CK_A CK_B
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	U1	version	-	-	Message version (0x02 for this version)	
1	X1	flags	-	-	RTCM input status flags	
	bit 0	U:1	crcFailed	-	-	0 when RTCM message received and passed CRC check, 1 when failed, in which case refStation and msgType might be corrupted and misleading
	bits 2...1	U:2	msgUsed	-	-	2 = RTCM message used successfully by the receiver, 1 = not used, 0 = do not know
2	U2	subType	-	-	Message subtype, only applicable to u-blox proprietary RTCM message 4072 (not available on all products)	
4	U2	refStation	-	-	Reference station ID: <ul style="list-style-type: none"> <li>For RTCM 2.3: Reference station ID of the received RTCM 2 input message. Valid range 0-1023.</li> <li>For RTCM 3.3: Reference station ID (DF003) of the received RTCM input message. Valid range 0-4095. Reported only for the standard RTCM messages that include the DF003 field and for the u-blox proprietary RTCM messages 4072.x. For all other messages, reports 0xFFFF.</li> </ul>	
6	U2	msgType	-	-	Message type	

### 3.17.6 UBX-RXM-SFRBX (0x02 0x13)

### 3.17.6.1 Broadcast navigation data subframe

<b>Message</b>	<b>UBX-RXM-SFRBX</b>					
	<b>Broadcast navigation data subframe</b>					
<i>Type</i>	Output					
<i>Comment</i>	This message reports a complete subframe of broadcast navigation data decoded from a single signal. The number of data words reported in each message depends on the nature of the signal.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x02	0x13	8 + numWords·4	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	gnssId	-	-	GNSS identifier (see <a href="#">Satellite Numbering</a> )	
1	U1	svId	-	-	Satellite identifier (see <a href="#">Satellite Numbering</a> )	
2	U1	reserved0	-	-	Reserved	
3	U1	freqId	-	-	Only used for GLONASS: This is the frequency slot + 7 (range from 0 to 13)	
4	U1	numWords	-	-	The number of data words contained in this message (up to 10, for currently supported signals)	
5	U1	chn	-	-	The tracking channel number the message was received on	
6	U1	version	-	-	Message version, (0x02 for this version)	
7	U1	reserved1	-	-	Reserved	
<i>Start of repeated group (numWords times)</i>						
8 + n·4	U4	dwrđ	-	-	The data words	
<i>End of repeated group (numWords times)</i>						

### 3.17.7 UBX-RXM-TM (0x02 0x74)

#### 3.17.7.1 Time mark data for UBX-RXM-RAWX

<b>Message</b>	<b>UBX-RXM-TM</b>					
	<b>Time mark data for UBX-RXM-RAWX</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message contains information for high precision time stamping / pulse counting in UBX-RXM-RAWX message's local time base. It allows a user to link the time mark measurements directly with the raw measurements. Note that UBX-RXM-RAWX local time is approximately aligned to the GPS time system. Refer to UBX-RXM-RAWX specs for more details on raw measurements local time base.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>

<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x01 for this version)	
1	U1[3]	reserved0	-	-	Reserved	
4	X1	jamFlags	-	-	Information related to jamming/interference	
bit 0	U:1	jamDetEnabled	-	-	Whether jamming/interference detection is enabled	
bits 2...1	U:2	jammingState	-	-	Jamming/interference state <ul style="list-style-type: none"> <li>0: Unknown</li> <li>1: No jamming indicated</li> <li>2: Warning; jamming indicated but fix OK</li> <li>3: Critical; jamming indicated and no fix</li> </ul>	
5	U1[3]	reserved1	-	-	Reserved	
8	X1	spfFlags	-	-	Information related to GNSS spoofing	
bit 0	U:1	spfDetEnabled	-	-	Whether spoofing detection is enabled	
bits 3...1	U:3	spoofingState	-	-	Spoofing state <ul style="list-style-type: none"> <li>0: Unknown</li> <li>1: No spoofing indicated</li> <li>2: Spoofing indicated</li> <li>3: Spoofing affirmed</li> </ul> <p>Note that the spoofing state value only reflects the detector state for the current navigation epoch. I.e. a value of 1: <i>No spoofing indicated</i> does not mean that the receiver is not spoofed, it simply states that the detector was not triggered in this epoch.</p>	

9	U1[3]	reserved2	-	-	Reserved
---	-------	-----------	---	---	----------

### 3.18.2 UBX-SEC-SIGLOG (0x27 0x10)

#### 3.18.2.1 Signal security log

<b>Message</b>	<b>UBX-SEC-SIGLOG</b>					
	<b>Signal security log</b>					
<b>Type</b>	Periodic/pollled					
<b>Comment</b>	<p>This message provides a log of past signal security related events, that is, events related to jamming and spoofing. Each event is a combination of a detection type and a event type, where the event type 'indication started' and 'indication stopped' and also the event type 'indication triggered' and 'indication timed-out' form a pair. A maximum of 16 events are logged; after the log is filled, recent events take precedence over past events in the log. Power cycles and restarts of the receiver reset the log, deleting its content.</p> <p>Note: It is advised not to restart the receiver while it's indicating spoofing.</p>					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x27	0x10	8 + numEvents*8	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	version	-	-	Message version (0x00 for this version)	
1	U1	numEvents	-	-	Number of events

20	U4	obs	-	-	Number of position observations used during survey-in	
24	U1	valid	-	-	Survey-in position validity flag, 1 = valid, otherwise 0	
25	U1	active	-	-	Survey-in in progress flag, 1 = in-progress, otherwise 0	
26	U1[2]	reserved0	-	-	Reserved	

### 3.19.2 UBX-TIM-TM2 (0x0d 0x03)

### 3.19.2.1 Time mark data

<b>Message</b>	<b>UBX-TIM-TM2</b>					
	<b>Time mark data</b>					
<i>Type</i>	Periodic/pollled					
<i>Comment</i>	This message contains information for high precision time stamping / pulse counting. The delay figures and timebase given in <a href="#">UBX-CFG-TP5</a> are also applied to the time results output in this message.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0d	0x03	28	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	ch	-	-	Channel (i.e. EXTINT) upon which the pulse was measured	
1	X1	flags	-	-	Bitmask	
bit 0	U:1	mode	-	-	<ul style="list-style-type: none"> <li>0=single</li> <li>1=running</li> </ul>	
bit 1	U:1	run	-	-	<ul style="list-style-type: none"> <li>0=armed</li> <li>1=stopped</li> </ul>	
bit 2	U:1	newFallingEdge	-	-	New falling edge detected	
bits 4...3	U:2	timeBase	-	-	<ul style="list-style-type: none"> <li>0=Time base is Receiver time</li> <li>1=Time base is GNSS time (the system according to the configuration in <a href="#">UBX-CFG-TP5</a> for tpldx=0)</li> <li>2=Time base is UTC (the variant according to the configuration in <a href="#">UBX-CFG-NAV5</a>)</li> </ul>	
bit 5	U:1	utc	-	-	<ul style="list-style-type: none"> <li>0=UTC not available</li> <li>1=UTC available</li> </ul>	
bit 6	U:1	time	-	-	<ul style="list-style-type: none"> <li>0=Time is not valid</li> <li>1=Time is valid (Valid GNSS fix)</li> </ul>	
bit 7	U:1	newRisingEdge	-	-	New rising edge detected	
2	U2	count	-	-	Rising edge counter	
4	U2	wnR	-	-	Week number of last rising edge	
6	U2	wnF	-	-	Week number of last falling edge	
8	U4	towMsR	-	ms	Tow of rising edge	
12	U4	towSubMsR	-	ns	Millisecond fraction of tow of rising edge in nanoseconds	
16	U4	towMsF	-	ms	Tow of falling edge	
20	U4	towSubMsF	-	ns	Millisecond fraction of tow of falling edge in nanoseconds	
24	U4	accEst	-	ns	Accuracy estimate	

### 3.19.3 UBX-TIM-TP (0x0d 0x01)

#### 3.19.3.1 Time pulse time data

<b>Message</b>	<b>UBX-TIM-TP</b>	
	<b>Time pulse time data</b>	
<i>Type</i>	Periodic/pollled	

**Comment** This message contains information on the timing of the next pulse at the TIMEPULSE0 output. The recommended configuration when using this message is to set both the measurement rate (**CFG-RATE**) and the timepulse frequency (**CFG-TP**) to 1 Hz.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0d	0x01	16	see below	CK_A CK_B

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	U4	towMS	-	ms	Time pulse time of week according to time base
4	U4	towSubMS	2 <sup>^</sup> -32	ms	Submillisecond part of towMS
8	I4	qErr	-	ps	Quantization error of time pulse
12	U2	week	-	weeks	Time pulse week number according to time base
14	X1	flags	-	-	Flags
bit 0	U:1	timeBase	-	-	<ul style="list-style-type: none"> <li>0 = Time base is GNSS</li> <li>1 = Time base is UTC</li> </ul>
bit 1	U:1	utc	-	-	<ul style="list-style-type: none"> <li>0 = UTC not available</li> <li>1 = UTC available</li> </ul>
bits 3...2	U:2	raim	-	-	(T)RAIM information <ul style="list-style-type: none"> <li>0 = Information not available</li> <li>1 = Not active</li> <li>2 = Active</li> </ul>
bit 4	U:1	qErrInvalid	-	-	<ul style="list-style-type: none"> <li>0 = Quantization error valid</li> <li>1 = Quantization error invalid</li> </ul>
15	X1	refInfo	-	-	Time reference information
bits 3...0	U:4	timeRefGnss	-	-	GNSS reference information. Only valid if time base is GNSS (timeBase=0). <ul style="list-style-type: none"> <li>0 = GPS</li> <li>1 = GLONASS</li> <li>2 = BeiDou</li> <li>3 = Galileo</li> <li>15 = Unknown</li> </ul>
bits 7...4	U:4	utcStandard	-	-	UTC standard identifier. Only valid if time base is UTC (timeBase=1). <ul style="list-style-type: none"> <li>0 = Information not available</li> <li>1 = Communications Research Laboratory (CRL), Tokyo, Japan</li> <li>2 = National Institute of Standards and Technology (NIST)</li> <li>3 = U.S. Naval Observatory (USNO)</li> <li>4 = International Bureau of Weights and Measures (BIPM)</li> <li>5 = European laboratories</li> <li>6 = Former Soviet Union (SU)</li> <li>7 = National Time Service Center (NTSC), China</li> <li>15 = Unknown</li> </ul>

### 3.19.4 UBX-TIM-VRFY (0x0d 0x06)

#### 3.19.4.1 Sourced time verification

<b>Message</b>	<b>UBX-TIM-VRFY</b>
	<b>Sourced time verification</b>
<b>Type</b>	Periodic/polled

<i>Comment</i>	This message contains verification information about previous time received via assistance data or from RTC.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x0d	0x06	20	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	I4	itow	-	ms	integer millisecond tow received by source	
4	I4	frac	-	ns	sub-millisecond part of tow	
8	I4	deltaMs	-	ms	integer milliseconds of delta time (current time minus sourced time)	
12	I4	deltaNs	-	ns	Sub-millisecond part of delta time	
16	U2	wno	-	week	Week number	
18	X1	flags	-	-	Flags	
	bits 2...0	U <sub>3</sub>	src	-	-	Aiding time source <ul style="list-style-type: none"> <li>• 0 = no time aiding done</li> <li>• 2 = source was RTC</li> <li>• 3 = source was assistance data</li> </ul>
19	U1	reserved0	-	-	Reserved	

## 3.20 UBX-UPD (0x09)

The messages in the UBX-UPD class are used to download a firmware to the receiver and to update the firmware on the flash.

### 3.20.1 UBX-UPD-SOS (0x09 0x14)

#### 3.20.1.1 Poll backup restore status

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>Poll backup restore status</b>					
<i>Type</i>	Poll request					
<i>Comment</i>	Sending this (empty) message to the receiver results in the receiver returning a <i>System restored from backup</i> message as defined below.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x09	0x14	0	see below	CK_A CK_B
<i>Payload</i>	This message has no payload.					

#### 3.20.1.2 Create backup in flash

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>Create backup in flash</b>					
<i>Type</i>	Command					
<i>Comment</i>	The host can send this message in order to save part of the battery-backed memory (BBR) in a file in the flash file system. The feature is designed in order to emulate the presence of the backup battery even if it is not present; the host can issue the save on shutdown command before switching off the device supply. It is recommended to issue a GNSS stop command using UBX-CFG-RST before in order to keep the BBR memory content consistent.					
<i>Message structure</i>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x09	0x14	4	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	

0	U1	cmd	-	-	Command (must be 0)
1	U1[3]	reserved0	-	-	Reserved

### 3.20.1.3 Clear backup in flash

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>Clear backup in flash</b>					
<b>Type</b>	Command					
<b>Comment</b>	The host can send this message in order to erase the backup file present in flash. It is recommended that the clear operation is issued after the host has received the notification that the memory has been restored after a reset. Alternatively the host can parse the startup string <i>Restored data saved on shutdown</i> or poll the UBX-UPD-SOS message for obtaining the status.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x09	0x14	4	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	cmd	-	-	Command (must be 1)	
1	U1[3]	reserved0	-	-	Reserved	

### 3.20.1.4 Backup creation acknowledge

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>Backup creation acknowledge</b>					
<b>Type</b>	Output					
<b>Comment</b>	The message is sent from the device as confirmation of creation of a backup file in flash. The host can safely shut down the device after having received this message.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x09	0x14	8	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	cmd	-	-	Command (must be 2)	
1	U1[3]	reserved0	-	-	Reserved	
4	U1	response	-	-	<ul style="list-style-type: none"> <li>0 = Not acknowledged</li> <li>1 = Acknowledged</li> </ul>	
5	U1[3]	reserved1	-	-	Reserved	

### 3.20.1.5 System restored from backup

<b>Message</b>	<b>UBX-UPD-SOS</b>					
	<b>System restored from backup</b>					
<b>Type</b>	Output					
<b>Comment</b>	The message is sent from the device to notify the host the BBR has been restored from a backup file in the flash file system. The host should clear the backup file after receiving this message. If the UBX-UPD-SOS message is polled, this message will be resent.					
<b>Message structure</b>	<i>Header</i>	<i>Class</i>	<i>ID</i>	<i>Length (Bytes)</i>	<i>Payload</i>	<i>Checksum</i>
	0xb5 0x62	0x09	0x14	8	see below	CK_A CK_B
<i>Payload description:</i>						
<i>Byte offset</i>	<i>Type</i>	<i>Name</i>	<i>Scale</i>	<i>Unit</i>	<i>Description</i>	
0	U1	cmd	-	-	Command (must be 3)	
1	U1[3]	reserved0	-	-	Reserved	

4	U1	response	-	-	<ul style="list-style-type: none"><li>• 0 = Unknown</li><li>• 1 = Failed restoring from backup</li><li>• 2 = Restored from backup</li><li>• 3 = Not restored (no backup)</li></ul>
5	U1[3]	reserved1	-	-	Reserved

## 4 RTCM protocol

### 4.1 RTCM introduction

The RTCM (Radio Technical Commission for Maritime Services) protocols are used to supply the GNSS receiver with real-time differential correction data. The RTCM protocol specifications are available from <http://www.rtcmm.org>.

The RTCM 3.x support is implemented according to *RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3*.

### 4.2 RTCM 3.x configuration

The configuration of RTCM 3.x input or RTCM 3.x output (if available) is further detailed in the [Integration manual](#) for typical applications.

The RTCM 3.x protocol can be disabled/enabled on communication interfaces using the [Configuration interface](#), for example configuration item [CFG-UART1INPROT-RTCM3X](#).

### 4.3 RTCM messages overview

Message	Class/ID	Description (Type)
<b>RTCM-3X – RTCM 3.3 messages</b>		
<a href="#">RTCM-3X-TYPE1001</a>	0xf5 0x01	Message type 1001 <ul style="list-style-type: none"> <li>L1-only GPS RTK observables (Input)</li> </ul>
<a href="#">RTCM-3X-TYPE1002</a>	0xf5 0x02	Message type 1002 <ul style="list-style-type: none"> <li>Extended L1-only GPS RTK observables (Input)</li> </ul>
<a href="#">RTCM-3X-TYPE1005</a>	0xf5 0x05	Message type 1005 <ul style="list-style-type: none"> <li>Stationary RTK reference station ARP (Input/output)</li> </ul>
<a href="#">RTCM-3X-TYPE1006</a>	0xf5 0x06	Message type 1006 <ul style="list-style-type: none"> <li>Stationary RTK reference station ARP with antenna height (Input)</li> </ul>
<a href="#">RTCM-3X-TYPE1009</a>	0xf5 0x09	Message type 1009 <ul style="list-style-type: none"> <li>L1-only GLONASS RTK observables (Input)</li> </ul>
<a href="#">RTCM-3X-TYPE1010</a>	0xf5 0x0a	Message type 1010 <ul style="list-style-type: none"> <li>Extended L1-Only GLONASS RTK observables (Input)</li> </ul>
<a href="#">RTCM-3X-TYPE1077</a>	0xf5 0x4d	Message type 1077 <ul style="list-style-type: none"> <li>GPS MSM7 (Input/output)</li> </ul>

<a href="#">RTCM-3X-TYPE1097</a>	0xf5 0x61	Message type 1097 <ul style="list-style-type: none"> <li>Galileo MSM7 (Input/output)</li> </ul>
<a href="#">RTCM-3X-TYPE1127</a>	0xf5 0x7f	Message type 1127 <ul style="list-style-type: none"> <li>BeiDou MSM7 (Input/output)</li> </ul>
<a href="#">RTCM-3X-TYPE1230</a>	0xf5 0xe6	Message type 1230 <ul style="list-style-type: none"> <li>GLONASS L1 and L2 code-phase biases (Input/output)</li> </ul>
<a href="#">RTCM-3X-TYPE4072_1</a>	0xf5 0xfd	Message type 4072, sub-type 1 <ul style="list-style-type: none"> <li>Additional reference station information (u-blox proprietary) (Input/output)</li> </ul>

## 4.4 RTCM 3.3 messages

For details see [RTCM protocol](#) and the *RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3* available from <http://www.rtc.org>.

### 4.4.1 Message type 1001

#### 4.4.1.1 L1-only GPS RTK observables

<b>Message</b>		<b>RTCM-3X-TYPE1001</b>			
		<b>L1-only GPS RTK observables</b>			
Type	Input				
Comment	See <i>RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3</i> for a detailed message specification.				
Information	Class/ID: 0xf5 0x01, Message Type: 1001 (0x3e9), Message Size: 6 + nData				
Payload description:					
Byte offset	Type	Name	Scale	Unit	Description
0	X1	rtcmByte0	-	-	RTCM frame byte 0
bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1
bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)
bits 7...2	U:6	res1	-	-	Reserved, all zero
2	X1	rtcmByte2	-	-	RTCM frame byte 2
bits 7...0	U:8	nData	-	-	Payload length (8 LSB)
Start of repeated group ( <i>nData</i> times)					
3 + n	U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
End of repeated group ( <i>nData</i> times)					
3 + nData	U1[3]	crc	-	-	Checksum

### 4.4.2 Message type 1002

#### 4.4.2.1 Extended L1-only GPS RTK observables

<b>Message</b>		<b>RTCM-3X-TYPE1002</b>			
		<b>Extended L1-only GPS RTK observables</b>			
Type	Input				
Comment	See <i>RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3</i> for a detailed message specification.				
Information	Class/ID: 0xf5 0x02, Message Type: 1002 (0x3ea), Message Size: 6 + nData				
Payload description:					
Byte offset	Type	Name	Scale	Unit	Description
0	X1	rtcmByte0	-	-	RTCM frame byte 0
bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1
bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)

	bits 7...2	U:6	res1	-	-	Reserved, all zero
2		X1	rtcmByte2	-	-	RTCM frame byte 2
	bits 7...0	U:8	nData	-	-	Payload length (8 LSB)
<i>Start of repeated group (nData times)</i>						
3 + n		U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
<i>End of repeated group (nData times)</i>						
3 + nData		U1[3]	crc	-	-	Checksum

### 4.4.3 Message type 1005

#### 4.4.3.1 Stationary RTK reference station ARP

<b>Message</b>	<b>RTCM-3X-TYPE1005</b> <b>Stationary RTK reference station ARP</b>					
Type	Input/output					
Comment	See <i>RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3</i> for a detailed message specification.					
Information	Class/ID: 0xf5 0x05, Message Type: 1005 (0x3ed), Message Size: 6 + nData					
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	
0	X1	rtcmByte0	-	-	RTCM frame byte 0	
	bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1	
	bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)
	bits 7...2	U:6	res1	-	-	Reserved, all zero
2	X1	rtcmByte2	-	-	RTCM frame byte 2	
	bits 7...0	U:8	nData	-	-	Payload length (8 LSB)
<i>Start of repeated group (nData times)</i>						
3 + n		U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
<i>End of repeated group (nData times)</i>						
3 + nData		U1[3]	crc	-	-	Checksum

### 4.4.4 Message type 1006

#### 4.4.4.1 Stationary RTK reference station ARP with antenna height

<b>Message</b>	<b>RTCM-3X-TYPE1006</b> <b>Stationary RTK reference station ARP with antenna height</b>					
Type	Input					
Comment	See <i>RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3</i> for a detailed message specification.					
Information	Class/ID: 0xf5 0x06, Message Type: 1006 (0x3ee), Message Size: 6 + nData					
<i>Payload description:</i>						
Byte offset	Type	Name	Scale	Unit	Description	

0	X1	rtcmByte0	-	-	RTCM frame byte 0
bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1
bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)
bits 7...2	U:6	res1	-	-	Reserved, all zero
2	X1	rtcmByte2	-	-	RTCM frame byte 2
bits 7...0	U:8	nData	-	-	Payload length (8 LSB)
<i>Start of repeated group (nData times)</i>					
3 + n	U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
<i>End of repeated group (nData times)</i>					
3 + nData	U1[3]	crc	-	-	Checksum

## 4.4.5 Message type 1009

### 4.4.5.1 L1-only GLONASS RTK observables

<b>Message</b>	<b>RTCM-3X-TYPE 1009</b> <b>L1-only GLONASS RTK observables</b>				
Type	Input				
Comment	See <i>RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3</i> for a detailed message specification.				
Information	Class/ID: 0xf5 0x09, Message Type: 1009 (0x3f1), Message Size: 6 + nData				
<i>Payload description:</i>					
Byte offset	Type	Name	Scale	Unit	Description
0	X1	rtcmByte0	-	-	RTCM frame byte 0
bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1
bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)
bits 7...2	U:6	res1	-	-	Reserved, all zero
2	X1	rtcmByte2	-	-	RTCM frame byte 2
bits 7...0	U:8	nData	-	-	Payload length (8 LSB)
<i>Start of repeated group (nData times)</i>					
3 + n	U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
<i>End of repeated group (nData times)</i>					
3 + nData	U1[3]	crc	-	-	Checksum

## 4.4.6 Message type 1010

### 4.4.6.1 Extended L1-Only GLONASS RTK observables

<b>Message</b>	<b>RTCM-3X-TYPE 1010</b> <b>Extended L1-Only GLONASS RTK observables</b>				
Type	Input				

**Comment** See *RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3* for a detailed message specification.

**Information** *Class/ID: 0xf5 0x0a, Message Type: 1010 (0x3f2), Message Size: 6 + nData*

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	X1	rtcmByte0	-	-	RTCM frame byte 0
bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1
bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)
bits 7...2	U:6	res1	-	-	Reserved, all zero
2	X1	rtcmByte2	-	-	RTCM frame byte 2
bits 7...0	U:8	nData	-	-	Payload length (8 LSB)

**Start of repeated group** (*nData* times)

3 + n	U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
-------	----	------	---	---	---

**End of repeated group** (*nData* times)

3 + nData	U1[3]	crc	-	-	Checksum
-----------	-------	-----	---	---	----------

## 4.4.7 Message type 1077

### 4.4.7.1 GPS MSM7

**Message** **RTCM-3X-TYPE1077**  
**GPS MSM7**

**Type** Input/output

**Comment** Full GPS Pseudoranges, PhaseRanges, PhaseRangeRate and CNR (high resolution)  
See *RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3* for a detailed message specification.

**Information** *Class/ID: 0xf5 0x4d, Message Type: 1077 (0x435), Message Size: 6 + nData*

**Payload description:**

Byte offset	Type	Name	Scale	Unit	Description
0	X1	rtcmByte0	-	-	RTCM frame byte 0
bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1
bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)
bits 7...2	U:6	res1	-	-	Reserved, all zero
2	X1	rtcmByte2	-	-	RTCM frame byte 2
bits 7...0	U:8	nData	-	-	Payload length (8 LSB)

**Start of repeated group** (*nData* times)

3 + n	U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
-------	----	------	---	---	---

**End of repeated group** (*nData* times)

3 + nData	U1[3]	crc	-	-	Checksum
-----------	-------	-----	---	---	----------

## 4.4.8 Message type 1087

### 4.4.8.1 GLONASS MSM7

<b>Message</b>	<b>RTCM-3X-TYPE1087 GLONASS MSM7</b>				
<b>Type</b>	Input/output				
<b>Comment</b>	Full GLONASS Pseudoranges, PhaseRanges, PhaseRangeRate and CNR (high resolution) See <i>RTCM Standard 10403.3 Recommended Standards for Differential GNSS (Global Navigation Satellite Systems) Service, Version 3</i> for a detailed message specification.				
<b>Information</b>	Class/ID: 0xf5 0x57, Message Type: 1087 (0x43f), Message Size: 6 + nData				
<b>Payload description:</b>					
Byte offset	Type	Name	Scale	Unit	Description
0	X1	rtcmByte0	-	-	RTCM frame byte 0
bits 7...0	U:8	preamble	-	-	Preamble (0xd3)
1	X1	rtcmByte1	-	-	RTCM frame byte 1
bits 1...0	U:2	nDataMSB	-	-	Payload length (2 MSB)

2	X1	rtcmByte2	-	-	RTCM frame byte 2
bits 7...0	U:8	nData	-	-	Payload length (8 LSB)
<i>Start of repeated group (nData times)</i>					
3 + n	U1	data	-	-	Message payload data. Payload data length defined by combining nDataMSB and nData to form a 10-bit value.
<i>End of repeated group (nData times)</i>					
3 + nData	U1[3]	crc	-	-	Checksum

## 5 Configuration interface

This chapter describes the receiver configuration interface.

### 5.1 Configuration database

The configuration database in the receiver's RAM holds the current configuration, which is used by the receiver at run-time. It is constructed on startup of the receiver from several sources of configuration. These sources are called *Configuration Layers*. The current configuration is called the *RAM Layer*. Any configuration in any layer is organized as *Configuration Items*, where each Configuration Item is referenced to by a unique *Configuration Key ID* and holds a single *Configuration Value*.

### 5.2 Configuration items

The following figure shows the structure of a *Configuration Item*, which consists of a (*Configuration*) *Key ID* and its (*Configuration*) *Value*:

A Configuration Key ID is a 32-bit integer value, which is split into the following parts:

- Bit 31: Currently unused. Reserved for future use.
- Bits 30...28: Three bits that indicate the storage size of a Configuration Value (range 0x01-0x05, see below)
- Bits 27...24: Currently unused. Reserved for future use.
- Bits 23...16: Eight bits that define a unique group ID (range 0x01-0xfe)
- Bits 15...12: Currently unused. Reserved for future use.
- Bits 11...0: Twelve bits that define a unique item ID within a group (range 0x001-0xffe)

The entire 32-bit value is the unique Key ID, which uniquely identifies a particular item. The numeric representation of the Key ID uses the lower-case hexadecimal format, such as 0x20c400a1. An easier, more readable text representation uses the form *CFG-GROUP-ITEM*. This is also referred to as the (*Configuration*) *Key Name*.

Supported storage size identifiers (bits 30...28 of the Key ID) are:

- 0x01: one bit (the actual storage used is one byte, but only the least significant bit is used)
- 0x02: one byte
- 0x03: two bytes
- 0x04: four bytes

- 0x05: eight bytes

Each Configuration Item is of a certain type, which defines the interpretation of the raw binary data (see also [UBX data types](#)):

- U1, U2, U4, U8: unsigned little-endian integers of 8-, 16-, 32- and 64-bit widths
- I1, I2, I4, I8: signed little-endian, two's complement integers of 8-, 16-, 32- and 64-bit widths
- R4, R8: IEEE 754 single (32-bit) and double (64-bit) precision floats
- E1, E2, E4: unsigned little-endian enumeration of 8-, 16-, and 32-bit widths
- X1, X2, X4, X8: unsigned little-endian integers of 8-, 16-, 32- and 64-bit widths for bitfields and other binary data, such as strings
- L: single-bit boolean (true = 1, false = 0), stored as U1

## 5.3 Configuration layers

Several *Configuration Layers* exist. They are separate sources of Configuration Items. Some of the layers are read-only and others are modifiable. Layers are organized in terms of priority. Values in a high-priority layer will replace values stored in low-priority layer. On startup of the receiver all configuration layers are read and the items within each layer are stacked up in order to create the *Current Configuration*, which is used by the receiver at run-time.

The following configuration layers are available (in order of priority, highest priority first):

- **RAM:** This layer contains items stored in volatile RAM. This is the Current Configuration. The value of any item can be set by the user at run-time (see [UBX protocol interface](#)) and it will become effective immediately.
- **BBR:** This layer contains items stored in the battery-backed RAM. The contents in this layer are preserved as long as a battery backup supply is provided during off periods. The value of any item can be set by the user at run-time (see [UBX protocol interface](#)) and it will become effective upon a restart of the receiver.
- **Flash:** This layer contains items stored permanently in the external flash memory. This layer is only available if there is a usable external flash memory. The value of any item can be set by the user at run-time (see [UBX protocol interface](#)) and it will become effective upon a restart of the receiver.
- **Default:** This layer contains all items known to the running receiver software and their hard-coded default values. Data in this layer is not writable.

The stacking of the Configuration Items from the different layers (sources) in order to construct the Current Configuration in the RAM Layer is depicted in the following figure. For each defined item, i.e. for each item in the Default Layer, the receiver software goes through the layers above and stacks all the found items on top. Some items may not be present in every layer. The result is the RAM Layer filled with all Configuration Items given Configuration Values coming from the highest priority layer the corresponding item was present. In the example figure below bold text indicates the source of the value in the Current Configuration (the RAM Layer). Empty boxes mean that the layer can hold the item but that it is not currently stored there. Boxes with text mean that an item is currently stored in the layer.

In the example figure above several items (e.g. the first item) are only set in the Default Layer and hence the default value ends up in Current Configuration in the RAM Layer. The third item is present in the Default, Flash and BBR Layers. The value from the BBR Layer has the highest priority and therefore it ends up in the RAM Layer. On the other hand, the default value of the sixth item is changed by the value in the Flash Layer. The value of the last item is changed in the RAM Layer only, i.e. upon startup the value in the RAM Layer was the value from the Default Layer, but the user has changed the value in the RAM Layer at run-time.

## 5.4 Configuration interface access

The following sections describe the existing interfaces to access the Configuration Database.

### 5.4.1 UBX protocol interface

The following [UBX protocol](#) messages are available to access the Configuration Database:

- [UBX-CFG-VALGET](#) to read Configuration Items from the database
- [UBX-CFG-VALSET](#) to set Configuration Items in the database
- [UBX-CFG-VALDEL](#) to delete Configuration Items from the database

## 5.5 Configuration data

Configuration data is the binary representation of a list of Key ID and Value pairs. It is formed by concatenating keys (U4 values) and values (variable type) without any padding. This format is used in the [UBX-CFG-VALSET](#) and [UBX-CFG-VALGET](#) messages.

The figure below shows an example. The four Items (Key ID - Value pairs) on the left use the four fundamental storage sizes: one byte (L, U1, I1, E1 and X1 types), 2 bytes (U2, I2, E2 and X2 types), four byte (U4, I4, E4, X4 and R4 types) and eight bytes (U8, I8, X8 and R8 types). When concatenated (right) the Key IDs and Values are not aligned and there is no padding.

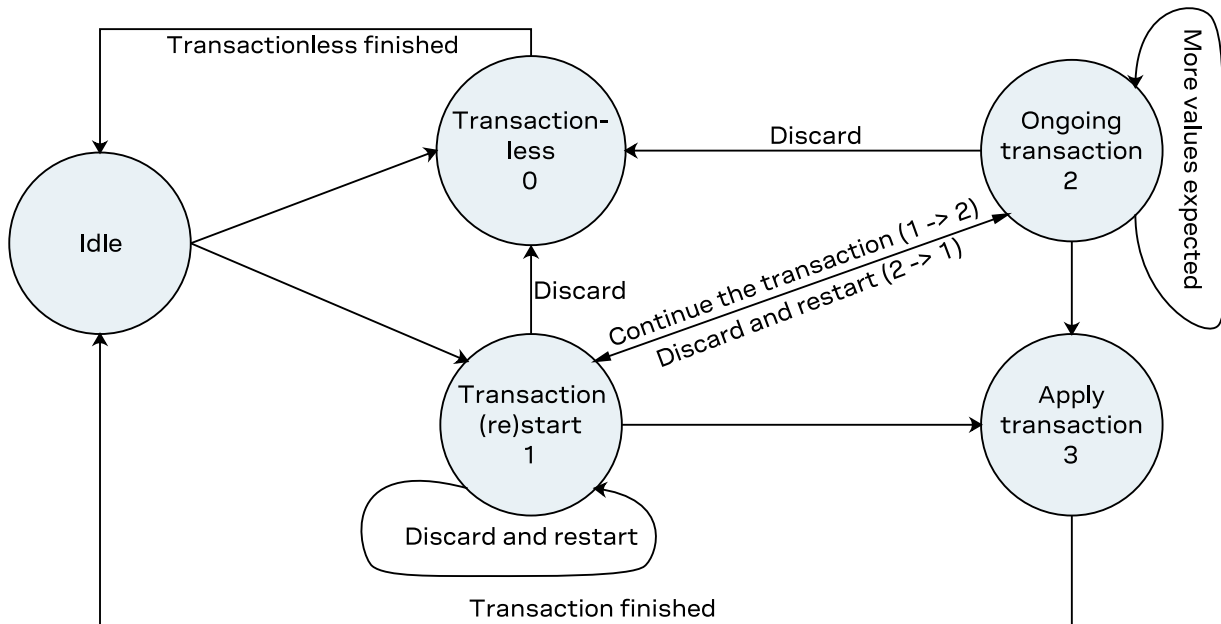

Note that this is an arbitrary example and any number of items of any value storage size can be concatenated the same way.

## 5.6 Configuration transactions

The configuration interface supports two mechanisms of configuration: the first is a transactionless mechanism where sent configuration changes are applied immediately to the configuration layer(s) requested. The second mechanism is a configuration transaction.

A transaction offers a way of queuing multiple configuration changes. It is particularly useful where different configuration keys depend on each other in such a way that sending one before the other can cause the configuration to be rejected. The queued configuration change requests are stored then checked collectively before being applied to the receiver.

A transaction can have the following states described in the figure below.

When starting a transaction, the user must specify the layer(s) the changes will be applied to. This list of configuration layer(s) must be observed throughout the transaction states. Modifying the configuration layer(s) mid-transaction will cause the transaction to be aborted and no queued changes will be applied.

In the start transaction state, the receiver will lock the configuration database so that changes from another entity or message cannot be applied. It is possible to send a configuration key-value pairs with the start transaction state. These will be queued waiting to be applied.

In the ongoing state, a configuration key and value must be sent. The receiver will abort the transaction and not apply any changes if this condition is violated. Key-value pairs sent in the ongoing state will be queued waiting to be applied.

In the apply state, the queued changes will be collectively checked and applied to the requested configuration layer(s). Note that any additional key-value pairs sent within the apply state will be ignored.

Note that a transaction can only come from a single source, a [UBX-CFG-VALSET](#) message or a [UBX-CFG-VALDEL](#) message. This means that in any given transaction it is not possible to mix a delete

and a save request. Starting a transaction from a different source will abort the current transaction and no queued changes would be applied.

Refer to [UBX-CFG-VALSET](#) and [UBX-CFG-VALDEL](#) messages for a detailed description of how to set up a configuration transaction, its limitations and conditions that would cause the transaction to be rejected.

## 5.7 Configuration reset behavior

The RAM layer is always rebuilt from the layers below when the chip's processor comes out from reset. When using [UBX-CFG-RST](#) the processor goes through a reset cycle with these reset types (`resetMode` field):

- 0x00 hardware reset (watchdog) immediately
- 0x01 controlled software reset
- 0x04 hardware reset (watchdog) after shutdown

See also the section *Forcing a receiver reset* in the [Integration Manual](#).

## 5.8 Configuration overview

Group	Description
<a href="#">CFG-BDS</a>	BeiDou system configuration

## 5.9 Configuration reference

### 5.9.1 CFG-BDS: BeiDou system configuration

Note that enabling and disabling of individual GNSS is done via the [CFG-SIGNAL](#) configuration group.

Configuration item	Key ID	Type	Scale	Unit	Description
<a href="#">CFG-BDS-USE_GEO_PRN</a>	0x10340014	L	-	-	Use BeiDou geostationary satellites (PRN 1-5 and 59-63)

Table 1: CFG-BDS configuration items

### 5.9.2 CFG-GEOFENCE: Geofencing configuration

Configuration for the geofencing feature. See section *Geofencing* in [Integration Manual](#) for feature details.

If the receiver is sent a valid new configuration, it will respond with a [UBX-ACK-ACK](#) message and immediately change to the new configuration. Otherwise the receiver will reject the request, by issuing a [UBX-ACK-NAK](#) and continuing operation with the previous configuration.

Note that the acknowledge message does not indicate whether the PIO configuration has been successfully applied (pin assigned), it only indicates the successful configuration of the feature. The configured PIO must be previously unoccupied for successful assignment.

Configuration item	Key ID	Type	Scale	Unit	Description
<a href="#">CFG-GEOFENCE-CONFLVL</a>	0x20240011	E1	-	-	Required confidence level for state evaluation This value times the position's standard deviation (sigma) defines the confidence band. See <a href="#">Table 3</a> below for a list of possible constants for this item.
<a href="#">CFG-GEOFENCE-USE_PIO</a>	0x10240012	L	-	-	Use PIO combined fence state output
<a href="#">CFG-GEOFENCE-PINPOL</a>	0x20240013	E1	-	-	PIO pin polarity See <a href="#">Table 4</a> below for a list of possible constants for this item.
<a href="#">CFG-GEOFENCE-PIN</a>	0x20240014	U1	-	-	PIO pin number
<a href="#">CFG-GEOFENCE-USE_FENCE1</a>	0x10240020	L	-	-	Use first geofence
<a href="#">CFG-GEOFENCE-FENCE1_LAT</a>	0x40240021	I4	1e-7	deg	Latitude of the first geofence circle center
<a href="#">CFG-GEOFENCE-FENCE1_LON</a>	0x40240022	I4	1e-7	deg	Longitude of the first geofence circle center

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-GEOFENCE-FENCE1_RAD</i>	0x40240023	U4	0.01	m	Radius of the first geofence circle
<i>CFG-GEOFENCE-USE_FENCE2</i>	0x10240030	L	-	-	Use second geofence
<i>CFG-GEOFENCE-FENCE2_LAT</i>	0x40240031	I4	1e-7	deg	Latitude of the second geofence circle center
<i>CFG-GEOFENCE-FENCE2_LON</i>	0x40240032	I4	1e-7	deg	Longitude of the second geofence circle center
<i>CFG-GEOFENCE-FENCE2_RAD</i>	0x40240033	U4	0.01	m	Radius of the second geofence circle
<i>CFG-GEOFENCE-USE_FENCE3</i>	0x10240040	L	-	-	Use third geofence
<i>CFG-GEOFENCE-FENCE3_LAT</i>	0x40240041	I4	1e-7	deg	Latitude of the third geofence circle center
<i>CFG-GEOFENCE-FENCE3_LON</i>	0x40240042	I4	1e-7	deg	Longitude of the third geofence circle center
<i>CFG-GEOFENCE-FENCE3_RAD</i>	0x40240043	U4	0.01	m	Radius of the third geofence circle
<i>CFG-GEOFENCE-USE_FENCE4</i>	0x10240050	L	-	-	Use fourth geofence
<i>CFG-GEOFENCE-FENCE4_LAT</i>	0x40240051	I4	1e-7	deg	Latitude of the fourth geofence circle center
<i>CFG-GEOFENCE-FENCE4_LON</i>	0x40240052	I4	1e-7	deg	Longitude of the fourth geofence circle center
<i>CFG-GEOFENCE-FENCE4_RAD</i>	0x40240053	U4	0.01	m	Radius of the fourth geofence circle

**Table 2: CFG-GEOFENCE configuration items**

Constant	Value	Description
<i>L000</i>	0	No confidence
<i>L680</i>	1	68%
<i>L950</i>	2	95%
<i>L997</i>	3	99.7%
<i>L9999</i>	4	99.99%
<i>L999999</i>	5	99.9999%

**Table 3: Constants for CFG-GEOFENCE-CONFLVL**

Constant	Value	Description
<i>LOW_IN</i>	0	PIO low means inside geofence
<i>LOW_OUT</i>	1	PIO low means outside geofence

**Table 4: Constants for CFG-GEOFENCE-PINPOL**

### 5.9.3 CFG-HW: Hardware configuration

Hardware configuration settings.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-HW-ANT_CFG_VOLTCTRL</i>	0x10a3002e	L	-	-	Active antenna voltage control flag Enable active antenna voltage control flag. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_SHORTDET</i>	0x10a3002f	L	-	-	Short antenna detection flag Enable short antenna detection flag. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_SHORTDET_POL</i>	0x10a30030	L	-	-	Short antenna detection polarity Set to true if polarity of the antenna short detection is active low. Used by EXT engine.
<i>CFG-HW-ANT_CFG_OPENDET</i>	0x10a30031	L	-	-	Open antenna detection flag Enable open antenna detection flag. Used by EXT and MADC engines.
<i>CFG-HW-ANT_CFG_OPENDET_POL</i>	0x10a30032	L	-	-	Open antenna detection polarity Set to true if polarity of the antenna open detection is active low. Used by EXT engine.
<i>CFG-HW-ANT_CFG_PWRDOWN</i>	0x10a30033	L	-	-	Power down antenna flag

Configuration item	Key ID	Type	Scale	Unit	Description
					Enable power down antenna logic in the event of antenna short circuit. CFG-HW-ANT_CFG_SHORTDET must be enabled to use this feature. Used by EXT and MADC engines.
CFG-HW-ANT_CFG_PWRDOWN_POL	0x10a30034	L	-	-	Power down antenna logic polarity Set to true if polarity of the antenna power down logic is active high. Used by EXT and MADC engines.
CFG-HW-ANT_CFG_RECOVER	0x10a30035	L	-	-	Automatic recovery from short state flag Enable automatic recovery from short state. Used by EXT and MADC engines.
CFG-HW-ANT_SUP_SWITCH_PIN	0x20a30036	U1	-	-	ANT1 PIO number Antenna Switch (ANT1) PIO number. Used by EXT and MADC engines.
CFG-HW-ANT_SUP_SHORT_PIN	0x20a30037	U1	-	-	ANT0 PIO number Antenna Short (ANT0) PIO number. Used by EXT engine.
CFG-HW-ANT_SUP_OPEN_PIN	0x20a30038	U1	-	-	ANT2 PIO number Antenna Switch (ANT2) PIO number. Used by EXT engine.
CFG-HW-ANT_SUP_ENGINE	0x20a30054	E1	-	-	Antenna supervisor engine selection Select the engine used to evaluate antenna state. See <a href="#">Table 6</a> below for a list of possible constants for this item.
CFG-HW-ANT_SUP_SHORT_THR	0x20a30055	U1	-	mV	Antenna supervisor MADC engine short detection threshold Threshold above which antenna short is detected. Used by MADC engine.
CFG-HW-ANT_SUP_OPEN_THR	0x20a30056	U1	-	mV	Antenna supervisor MADC engine open detection threshold Threshold below which antenna open/disconnected is detected. Used by MADC engine.

**Table 5: CFG-HW configuration items**

Constant	Value	Description
EXT	0	Uses external comparators for current measurement.
MADC	1	Uses built-in ADC and a shunt for current measurement.

**Table 6: Constants for CFG-HW-ANT\_SUP\_ENGINE**

### 5.9.4 CFG-I2C: Configuration of the I2C interface

Settings needed to configure the I2C communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-I2C-ADDRESS	0x20510001	U1	-	-	I2C slave address of the receiver (7 bits)
CFG-I2C-EXTENDEDTIMEOUT	0x10510002	L	-	-	Flag to disable timeouting the interface after 1.5 s
CFG-I2C-ENABLED	0x10510003	L	-	-	Flag to indicate if the I2C interface should be enabled

**Table 7: CFG-I2C configuration items**

### 5.9.5 CFG-I2CINPROT: Input protocol configuration of the I2C interface

Input protocol enable flags of the I2C interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-I2CINPROT-UBX	0x10710001	L	-	-	Flag to indicate if UBX should be an input protocol on I2C
CFG-I2CINPROT-NMEA	0x10710002	L	-	-	Flag to indicate if NMEA should be an input protocol on I2C

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-I2CINPROT-RTCM3X</i>	0x10710004	L	-	-	Flag to indicate if RTCM3X should be an input protocol on I2C

**Table 8: CFG-I2CINPROT configuration items**

### 5.9.6 CFG-I2COUTPROT: Output protocol configuration of the I2C interface

Output protocol enable flags of the I2C interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-I2COUTPROT-UBX</i>	0x10720001	L	-	-	Flag to indicate if UBX should be an output protocol on I2C
<i>CFG-I2COUTPROT-NMEA</i>	0x10720002	L	-	-	Flag to indicate if NMEA should be an output protocol on I2C
<i>CFG-I2COUTPROT-RTCM3X</i>	0x10720004	L	-	-	Flag to indicate if RTCM3X should be an output protocol on I2C

**Table 9: CFG-I2COUTPROT configuration items**

### 5.9.7 CFG-INFMSG: Information message configuration

Information message configuration for the NMEA and UBX protocols.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-INFMSG-UBX_I2C</i>	0x20920001	X1	-	-	Information message enable flags for the UBX protocol on the I2C interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-UBX_UART1</i>	0x20920002	X1	-	-	Information message enable flags for the UBX protocol on the UART1 interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-UBX_UART2</i>	0x20920003	X1	-	-	Information message enable flags for the UBX protocol on the UART2 interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-UBX_USB</i>	0x20920004	X1	-	-	Information message enable flags for the UBX protocol on the USB interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-UBX_SPI</i>	0x20920005	X1	-	-	Information message enable flags for the UBX protocol on the SPI interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_I2C</i>	0x20920006	X1	-	-	Information message enable flags for the NMEA protocol on the I2C interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_UART1</i>	0x20920007	X1	-	-	Information message enable flags for the NMEA protocol on the UART1 interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_UART2</i>	0x20920008	X1	-	-	Information message enable flags for the NMEA protocol on the UART2 interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_USB</i>	0x20920009	X1	-	-	Information message enable flags for the NMEA protocol on the USB interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					
<i>CFG-INFMSG-NMEA_SPI</i>	0x2092000a	X1	-	-	Information message enable flags for the NMEA protocol on the SPI interface
See <a href="#">Table 11</a> below for a list of possible constants for this item.					

**Table 10: CFG-INFMSG configuration items**

Constant	Value	Description
<i>ERROR</i>	0x01	Enable ERROR information messages
<i>WARNING</i>	0x02	Enable WARNING information messages
<i>NOTICE</i>	0x04	Enable NOTICE information messages
<i>TEST</i>	0x08	Enable TEST information messages
<i>DEBUG</i>	0x10	Enable DEBUG information messages

**Table 11: Constants for CFG-INFMSG-UBX\_I2C, CFG-INFMSG-UBX\_UART1, CFG-INFMSG-UBX\_UART2, CFG-INFMSG-UBX\_USB, CFG-INFMSG-UBX\_SPI, CFG-INFMSG-NMEA\_I2C, CFG-INFMSG-NMEA\_UART1, CFG-INFMSG-NMEA\_UART2, CFG-INFMSG-NMEA\_USB, CFG-INFMSG-NMEA\_SPI**

### 5.9.8 CFG-ITFM: Jamming and interference monitor configuration

Configuration of jamming and interference monitor.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-ITFM-BBTHRESHOLD</i>	0x20410001	U1	-	-	Broadband jamming detection threshold
<i>CFG-ITFM-CWTHRESHOLD</i>	0x20410002	U1	-	-	CW jamming detection threshold
<i>CFG-ITFM-ENABLE</i>	0x1041000d	L	-	-	Enable interference detection
<i>CFG-ITFM-ANTSETTING</i>	0x20410010	E1	-	-	Antenna setting
See <a href="#">Table 13</a> below for a list of possible constants for this item.					
<i>CFG-ITFM-ENABLE_AUX</i>	0x10410013	L	-	-	Scan auxiliary bands
Set to true to scan auxiliary bands.					
Supported on u-blox 8 / u-blox M8 only, otherwise ignored.					

**Table 12: CFG-ITFM configuration items**

Constant	Value	Description
<i>UNKNOWN</i>	0	Unknown
<i>PASSIVE</i>	1	Passive
<i>ACTIVE</i>	2	Active

**Table 13: Constants for CFG-ITFM-ANTSETTING**

### 5.9.9 CFG-LOGFILTER: Data logger configuration

This group can be used to configure the data logger, i.e. to enable/disable the log recording and to get/set the position entry filter settings.

Position entries can be filtered based on time difference, position difference or current speed thresholds. Position and speed filtering also have a minimum time interval. A position is logged if any of the thresholds are exceeded. If a threshold is set to zero it is ignored. The maximum rate of position logging is 1 Hz.

The filter settings will be configured to the provided values only if the `APPLY_ALL_FILTERS` flag is set. This allows the recording to be enabled/disabled independently of configuring the filter settings.

It is possible to configure the data logger in the absence of a logging file. By doing so, once the logging file is created, the data logger configuration will take effect immediately and logging recording and filtering will activate according to the configuration.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-LOGFILTER-RECORD_ENA</i>	0x10de0002	L	-	-	Recording enabled
Set to true when recording enabled.					

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-LOGFILTER-ONCE_PER_WAKE_UP_ENA</i>	0x10de0003	L	-	-	Once per wake up
					Set to true recording only one single position per PSM on/off mode wake-up period is enabled. Note: the value set here does not take effect unless CFG-LOGFILTER-APPLY_ALL_FILTERS is enabled.
<i>CFG-LOGFILTER-APPLY_ALL_FILTERS</i>	0x10de0004	L	-	-	Apply all filter settings
					Set to true when all filter settings are to be applied, not just recording enabling/disabling.
<i>CFG-LOGFILTER-MIN_INTERVAL</i>	0x30de0005	U2	-	s	Minimum time interval between logged positions
					Minimum time interval between logged positions (0 = not set). <b>This is only applied in combination with the speed and/or position thresholds.</b> If both MIN_INTERVAL and TIME_THRS are set, MIN_INTERVAL must be less than or equal to TIME_THRS. Note: the value set here does not take effect unless CFG-LOGFILTER-APPLY_ALL_FILTERS is enabled.
<i>CFG-LOGFILTER-TIME_THRS</i>	0x30de0006	U2	-	s	Time threshold
					If the time difference is greater than the threshold then the position is logged (0 = not set). Note: the value set here does not take effect unless CFG-LOGFILTER-APPLY_ALL_FILTERS is enabled.
<i>CFG-LOGFILTER-SPEED_THRS</i>	0x30de0007	U2	-	m/s	Speed threshold
					If the current speed is greater than the threshold then the position is logged (0 = not set). MIN_INTERVAL also applies. Note: value set here does not take effect unless CFG-LOGFILTER-APPLY_ALL_FILTERS is enabled.
<i>CFG-LOGFILTER-POSITION_THRS</i>	0x40de0008	U4	-	m	Position threshold
					If the 3D position difference is greater than the threshold then the position is logged (0 = not set). MIN_INTERVAL also applies. Note: the value set here does not take effect unless CFG-LOGFILTER-APPLY_ALL_FILTERS is enabled.

**Table 14: CFG-LOGFILTER configuration items**

### 5.9.10 CFG-MOT: Motion detector configuration

The items in this group specify the parameters used for the internal receiver motion detector. The platform motion is assessed by combining the detected motion of different detectors looking at specific data types (i.e. GNSS, gyroscopes, accelerometers, wheel ticks). The decision thresholds of the internal detectors can be specified using the configuration items in this group.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MOT-GNSSSPEED_THRS</i>	0x20250038	U1	0.01	m/s	GNSS speed threshold below which platform is considered as stationary (a.k.a. static hold threshold)
					Set this parameter to 0 for firmware default value or behavior.
<i>CFG-MOT-GNSSDIST_THRS</i>	0x3025003b	U2	-	-	Distance above which GNSS-based stationary motion is exit (a.k.a. static hold distance threshold)
					Set this parameter to 0 for firmware default value or behavior.

**Table 15: CFG-MOT configuration items**

### 5.9.11 CFG-MSGOUT: Message output configuration

For each message and port a separate output rate (per second, per epoch) can be configured.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGOUT-NMEA_ID_DTM_I2C</i>	0x209100a6	U1	-	-	Output rate of the NMEA-GX-DTM message on port I2C
<i>CFG-MSGOUT-NMEA_ID_DTM_SPI</i>	0x209100aa	U1	-	-	Output rate of the NMEA-GX-DTM message on port SPI

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGOUT-NMEA_ID_DTM_UART1</i>	0x209100a7	U1	-	-	Output rate of the NMEA-GX-DTM message on port UART1
<i>CFG-MSGOUT-NMEA_ID_DTM_UART2</i>	0x209100a8	U1	-	-	Output rate of the NMEA-GX-DTM message on port UART2
<i>CFG-MSGOUT-NMEA_ID_DTM_USB</i>	0x209100a9	U1	-	-	Output rate of the NMEA-GX-DTM message on port USB
<i>CFG-MSGOUT-NMEA_ID_GBS_I2C</i>	0x209100dd	U1	-	-	Output rate of the NMEA-GX-GBS message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GBS_SPI</i>	0x209100e1	U1	-	-	Output rate of the NMEA-GX-GBS message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GBS_UART1</i>	0x209100de	U1	-	-	Output rate of the NMEA-GX-GBS message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GBS_UART2</i>	0x209100df	U1	-	-	Output rate of the NMEA-GX-GBS message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GBS_USB</i>	0x209100e0	U1	-	-	Output rate of the NMEA-GX-GBS message on port USB
<i>CFG-MSGOUT-NMEA_ID_GGA_I2C</i>	0x209100ba	U1	-	-	Output rate of the NMEA-GX-GGA message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GGA_SPI</i>	0x209100be	U1	-	-	Output rate of the NMEA-GX-GGA message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GGA_UART1</i>	0x209100bb	U1	-	-	Output rate of the NMEA-GX-GGA message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GGA_UART2</i>	0x209100bc	U1	-	-	Output rate of the NMEA-GX-GGA message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GGA_USB</i>	0x209100bd	U1	-	-	Output rate of the NMEA-GX-GGA message on port USB
<i>CFG-MSGOUT-NMEA_ID_GLL_I2C</i>	0x209100c9	U1	-	-	Output rate of the NMEA-GX-GLL message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GLL_SPI</i>	0x209100cd	U1	-	-	Output rate of the NMEA-GX-GLL message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GLL_UART1</i>	0x209100ca	U1	-	-	Output rate of the NMEA-GX-GLL message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GLL_UART2</i>	0x209100cb	U1	-	-	Output rate of the NMEA-GX-GLL message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GLL_USB</i>	0x209100cc	U1	-	-	Output rate of the NMEA-GX-GLL message on port USB
<i>CFG-MSGOUT-NMEA_ID_GNS_I2C</i>	0x209100b5	U1	-	-	Output rate of the NMEA-GX-GNS message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GNS_SPI</i>	0x209100b9	U1	-	-	Output rate of the NMEA-GX-GNS message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GNS_UART1</i>	0x209100b6	U1	-	-	Output rate of the NMEA-GX-GNS message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GNS_UART2</i>	0x209100b7	U1	-	-	Output rate of the NMEA-GX-GNS message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GNS_USB</i>	0x209100b8	U1	-	-	Output rate of the NMEA-GX-GNS message on port USB
<i>CFG-MSGOUT-NMEA_ID_GRS_I2C</i>	0x209100ce	U1	-	-	Output rate of the NMEA-GX-GRS message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GRS_SPI</i>	0x209100d2	U1	-	-	Output rate of the NMEA-GX-GRS message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GRS_UART1</i>	0x209100cf	U1	-	-	Output rate of the NMEA-GX-GRS message on port UART1

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGOUT-NMEA_ID_GRS_UART2</i>	0x209100d0	U1	-	-	Output rate of the NMEA-GX-GRS message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GRS_USB</i>	0x209100d1	U1	-	-	Output rate of the NMEA-GX-GRS message on port USB
<i>CFG-MSGOUT-NMEA_ID_GSA_I2C</i>	0x209100bf	U1	-	-	Output rate of the NMEA-GX-GSA message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GSA_SPI</i>	0x209100c3	U1	-	-	Output rate of the NMEA-GX-GSA message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GSA_UART1</i>	0x209100c0	U1	-	-	Output rate of the NMEA-GX-GSA message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GSA_UART2</i>	0x209100c1	U1	-	-	Output rate of the NMEA-GX-GSA message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GSA_USB</i>	0x209100c2	U1	-	-	Output rate of the NMEA-GX-GSA message on port USB
<i>CFG-MSGOUT-NMEA_ID_GST_I2C</i>	0x209100d3	U1	-	-	Output rate of the NMEA-GX-GST message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GST_SPI</i>	0x209100d7	U1	-	-	Output rate of the NMEA-GX-GST message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GST_UART1</i>	0x209100d4	U1	-	-	Output rate of the NMEA-GX-GST message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GST_UART2</i>	0x209100d5	U1	-	-	Output rate of the NMEA-GX-GST message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GST_USB</i>	0x209100d6	U1	-	-	Output rate of the NMEA-GX-GST message on port USB
<i>CFG-MSGOUT-NMEA_ID_GSV_I2C</i>	0x209100c4	U1	-	-	Output rate of the NMEA-GX-GSV message on port I2C
<i>CFG-MSGOUT-NMEA_ID_GSV_SPI</i>	0x209100c8	U1	-	-	Output rate of the NMEA-GX-GSV message on port SPI
<i>CFG-MSGOUT-NMEA_ID_GSV_UART1</i>	0x209100c5	U1	-	-	Output rate of the NMEA-GX-GSV message on port UART1
<i>CFG-MSGOUT-NMEA_ID_GSV_UART2</i>	0x209100c6	U1	-	-	Output rate of the NMEA-GX-GSV message on port UART2
<i>CFG-MSGOUT-NMEA_ID_GSV_USB</i>	0x209100c7	U1	-	-	Output rate of the NMEA-GX-GSV message on port USB
<i>CFG-MSGOUT-NMEA_ID_RLM_I2C</i>	0x20910400	U1	-	-	Output rate of the NMEA-GX-RLM message on port I2C
<i>CFG-MSGOUT-NMEA_ID_RLM_SPI</i>	0x20910404	U1	-	-	Output rate of the NMEA-GX-RLM message on port SPI
<i>CFG-MSGOUT-NMEA_ID_RLM_UART1</i>	0x20910401	U1	-	-	Output rate of the NMEA-GX-RLM message on port UART1
<i>CFG-MSGOUT-NMEA_ID_RLM_UART2</i>	0x20910402	U1	-	-	Output rate of the NMEA-GX-RLM message on port UART2
<i>CFG-MSGOUT-NMEA_ID_RLM_USB</i>	0x20910403	U1	-	-	Output rate of the NMEA-GX-RLM message on port USB
<i>CFG-MSGOUT-NMEA_ID_RMC_I2C</i>	0x209100ab	U1	-	-	Output rate of the NMEA-GX-RMC message on port I2C
<i>CFG-MSGOUT-NMEA_ID_RMC_SPI</i>	0x209100af	U1	-	-	Output rate of the NMEA-GX-RMC message on port SPI
<i>CFG-MSGOUT-NMEA_ID_RMC_UART1</i>	0x209100ac	U1	-	-	Output rate of the NMEA-GX-RMC message on port UART1
<i>CFG-MSGOUT-NMEA_ID_RMC_UART2</i>	0x209100ad	U1	-	-	Output rate of the NMEA-GX-RMC message on port UART2

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGOUT-NMEA_ID_RMC_USB</i>	0x209100ae	U1	-	-	Output rate of the NMEA-GX-RMC message on port USB
<i>CFG-MSGOUT-NMEA_ID_VLW_I2C</i>	0x209100e7	U1	-	-	Output rate of the NMEA-GX-VLW message on port I2C
<i>CFG-MSGOUT-NMEA_ID_VLW_SPI</i>	0x209100eb	U1	-	-	Output rate of the NMEA-GX-VLW message on port SPI
<i>CFG-MSGOUT-NMEA_ID_VLW_UART1</i>	0x209100e8	U1	-	-	Output rate of the NMEA-GX-VLW message on port UART1
<i>CFG-MSGOUT-NMEA_ID_VLW_UART2</i>	0x209100e9	U1	-	-	Output rate of the NMEA-GX-VLW message on port UART2
<i>CFG-MSGOUT-NMEA_ID_VLW_USB</i>	0x209100ea	U1	-	-	Output rate of the NMEA-GX-VLW message on port USB
<i>CFG-MSGOUT-NMEA_ID_VTG_I2C</i>	0x209100b0	U1	-	-	Output rate of the NMEA-GX-VTG message on port I2C
<i>CFG-MSGOUT-NMEA_ID_VTG_SPI</i>	0x209100b4	U1	-	-	Output rate of the NMEA-GX-VTG message on port SPI
<i>CFG-MSGOUT-NMEA_ID_VTG_UART1</i>	0x209100b1	U1	-	-	Output rate of the NMEA-GX-VTG message on port UART1
<i>CFG-MSGOUT-NMEA_ID_VTG_UART2</i>	0x209100b2	U1	-	-	Output rate of the NMEA-GX-VTG message on port UART2
<i>CFG-MSGOUT-NMEA_ID_VTG_USB</i>	0x209100b3	U1	-	-	Output rate of the NMEA-GX-VTG message on port USB
<i>CFG-MSGOUT-NMEA_ID_ZDA_I2C</i>	0x209100d8	U1	-	-	Output rate of the NMEA-GX-ZDA message on port I2C
<i>CFG-MSGOUT-NMEA_ID_ZDA_SPI</i>	0x209100dc	U1	-	-	Output rate of the NMEA-GX-ZDA message on port SPI
<i>CFG-MSGOUT-NMEA_ID_ZDA_UART1</i>	0x209100d9	U1	-	-	Output rate of the NMEA-GX-ZDA message on port UART1
<i>CFG-MSGOUT-NMEA_ID_ZDA_UART2</i>	0x209100da	U1	-	-	Output rate of the NMEA-GX-ZDA message on port UART2
<i>CFG-MSGOUT-NMEA_ID_ZDA_USB</i>	0x209100db	U1	-	-	Output rate of the NMEA-GX-ZDA message on port USB
<i>CFG-MSGOUT-NMEA_NAV2_ID_GGA_I2C</i>	0x20910661	U1	-	-	Output rate of the NMEA-NAV2-GX-GGA message on port I2C
<i>CFG-MSGOUT-NMEA_NAV2_ID_GGA_SPI</i>	0x20910665	U1	-	-	Output rate of the NMEA-NAV2-GX-GGA message on port SPI
<i>CFG-MSGOUT-NMEA_NAV2_ID_GGA_UART1</i>	0x20910662	U1	-	-	Output rate of the NMEA-NAV2-GX-GGA message on port UART1
<i>CFG-MSGOUT-NMEA_NAV2_ID_GGA_UART2</i>	0x20910663	U1	-	-	Output rate of the NMEA-NAV2-GX-GGA message on port UART2
<i>CFG-MSGOUT-NMEA_NAV2_ID_GGA_USB</i>	0x20910664	U1	-	-	Output rate of the NMEA-NAV2-GX-GGA message on port USB
<i>CFG-MSGOUT-NMEA_NAV2_ID_GLL_I2C</i>	0x20910670	U1	-	-	Output rate of the NMEA-NAV2-GX-GLL message on port I2C
<i>CFG-MSGOUT-NMEA_NAV2_ID_GLL_SPI</i>	0x20910674	U1	-	-	Output rate of the NMEA-NAV2-GX-GLL message on port SPI
<i>CFG-MSGOUT-NMEA_NAV2_ID_GLL_UART1</i>	0x20910671	U1	-	-	Output rate of the NMEA-NAV2-GX-GLL message on port UART1
<i>CFG-MSGOUT-NMEA_NAV2_ID_GLL_UART2</i>	0x20910672	U1	-	-	Output rate of the NMEA-NAV2-GX-GLL message on port UART2
<i>CFG-MSGOUT-NMEA_NAV2_ID_GLL_USB</i>	0x20910673	U1	-	-	Output rate of the NMEA-NAV2-GX-GLL message on port USB

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GNS_I2C</i>	0x2091065c	U1	-	-	Output rate of the NMEA-NAV2-GX-GNS message on port I2C
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GNS_SPI</i>	0x20910660	U1	-	-	Output rate of the NMEA-NAV2-GX-GNS message on port SPI
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GNS_UART1</i>	0x2091065d	U1	-	-	Output rate of the NMEA-NAV2-GX-GNS message on port UART1
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GNS_UART2</i>	0x2091065e	U1	-	-	Output rate of the NMEA-NAV2-GX-GNS message on port UART2
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GNS_USB</i>	0x2091065f	U1	-	-	Output rate of the NMEA-NAV2-GX-GNS message on port USB
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GSA_I2C</i>	0x20910666	U1	-	-	Output rate of the NMEA-NAV2-GX-GSA message on port I2C
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GSA_SPI</i>	0x2091066a	U1	-	-	Output rate of the NMEA-NAV2-GX-GSA message on port SPI
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GSA_UART1</i>	0x20910667	U1	-	-	Output rate of the NMEA-NAV2-GX-GSA message on port UART1
<i>CFG-MSGGOUT-NMEA_NAV2_ID_GSA_UART2</i>	0x20910668	U1	-	-	Output rate of the NMEA-NAV2-GX-GSA message on port UART2

<i>CFG-MSGOUT-UBX_TIM_VRFY_UART2</i>	0x20910094	U1	-	-	Output rate of the UBX-TIM-VRFY message on port UART2
<i>CFG-MSGOUT-UBX_TIM_VRFY_USB</i>	0x20910095	U1	-	-	Output rate of the UBX-TIM-VRFY message on port USB

**Table 16: CFG-MSGOUT configuration items**

### 5.9.12 CFG-NAV2: Secondary output configuration

This group contains configuration items related to the secondary (NAV2) output.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NAV2-OUT_ENABLED</i>	0x10170001	L	-	-	Enable secondary (NAV2) output Enables the secondary output (GNSS standalone output). It can be used simultaneously with the available primary output (high precision, sensor fusion or time mode output).
<i>CFG-NAV2-SBAS_USE_INTEGRITY</i>	0x10170002	L	-	-	Use SBAS integrity information in the secondary output

Configuration item	Key ID	Type	Scale	Unit	Description
					If enabled, the receiver will only use GPS satellites for which integrity information is available. This configuration item allows configuring the SBAS integrity feature differently for the primary output and the secondary output. For configuring the primary output, see CFG-SBAS-USE_INTEGRITY.

**Table 17: CFG-NAV2 configuration items**

### 5.9.13 CFG-NAVSPG: Standard precision navigation configuration

This group contains configuration items related to the operation of the receiver at standard precision, including configuring position fix mode, ionospheric model selection and other related items.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NAVSPG-FIXMODE	0x20110011	E1	-	-	Position fix mode See <a href="#">Table 19</a> below for a list of possible constants for this item.
CFG-NAVSPG-INIFIX3D	0x10110013	L	-	-	Initial fix must be a 3D fix
CFG-NAVSPG-WKNROLLOVER	0x30110017	U2	-	-	GPS week rollover number GPS week numbers will be set correctly from this week up to 1024 weeks after this week. Range is from 1 to 4096.
CFG-NAVSPG-USE_PPP	0x10110019	L	-	-	Use precise point positioning (PPP)
CFG-NAVSPG-UTCSTANDARD	0x2011001c	E1	-	-	UTC standard to be used See also section <i>GNSS time base</i> in the <a href="#">Integration manual</a> . See <a href="#">Table 20</a> below for a list of possible constants for this item.
CFG-NAVSPG-DYNMODEL	0x20110021	E1	-	-	Dynamic platform model See <a href="#">Table 21</a> below for a list of possible constants for this item.
CFG-NAVSPG-ACKAIDING	0x10110025	L	-	-	Acknowledge assistance input messages
CFG-NAVSPG-USE_USRDAT	0x10110061	L	-	-	Use user geodetic datum parameters This must be set together with all CFG-NAVSPG-USERDAT_* parameters.
CFG-NAVSPG-USRDAT_MAJA	0x50110062	R8	-	m	Geodetic datum semi-major axis Accepted range is from 6,300,000.0 to 6,500,000.0 meters This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
CFG-NAVSPG-USRDAT_FLAT	0x50110063	R8	-	-	Geodetic datum 1.0 / flattening Accepted range is 0.0 to 500.0. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
CFG-NAVSPG-USRDAT_DX	0x40110064	R4	-	m	Geodetic datum X axis shift at the origin Accepted range is +/- 5000.0 meters. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
CFG-NAVSPG-USRDAT_DY	0x40110065	R4	-	m	Geodetic datum Y axis shift at the origin Accepted range is +/- 5000.0 meters. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
CFG-NAVSPG-USRDAT_DZ	0x40110066	R4	-	m	Geodetic datum Z axis shift at the origin Accepted range is +/- 5000.0 meters. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.
CFG-NAVSPG-USRDAT_ROTX	0x40110067	R4	-	arcsec	Geodetic datum rotation about the X axis

Configuration item	Key ID	Type	Scale	Unit	Description
Accepted range is +/- 20.0 milli arc seconds. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.					
CFG-NAVSPG-USRDAT_ROT_Y	0x40110068	R4	-	arcsec	Geodetic datum rotation about the Y axis ( )
Accepted range is +/- 20.0 milli-arc seconds. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_* parameters.					
CFG-NAVSPG-USRDAT_ROT_Z	0x40110069	R4	-	arcsec	Geodetic datum rotation about the Z axis
Accepted range is +/- 20.0 milli-arc seconds. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.					
CFG-NAVSPG-USRDAT_SCALE	0x4011006a	R4	-	ppm	Geodetic datum scale factor
Accepted range is 0.0 to 50.0 parts per million. This will only be used if CFG-NAVSPG-USE_USERDAT is set. It must be set together with all other CFG-NAVSPG-USERDAT_... parameters.					
CFG-NAVSPG-INFIL_MINSVS	0x201100a1	U1	-	-	Minimum number of satellites for navigation
CFG-NAVSPG-INFIL_MAXSVS	0x201100a2	U1	-	-	Maximum number of satellites for navigation
CFG-NAVSPG-INFIL_MINCNO	0x201100a3	U1	-	dBHz	Minimum satellite signal level for navigation
CFG-NAVSPG-INFIL_MINELEV	0x201100a4	I1	-	deg	Minimum elevation for a GNSS satellite to be used in navigation
CFG-NAVSPG-INFIL_NCNOTHRS	0x201100aa	U1	-	-	Number of satellites required to have C/N0 above CFG-NAVSPG-INFIL_CN0THRS for a fix to be attempted
CFG-NAVSPG-INFIL_CN0THRS	0x201100ab	U1	-	-	C/N0 threshold for deciding whether to attempt a fix
CFG-NAVSPG-OUTFIL_PDOP	0x301100b1	U2	0.1	-	Output filter position DOP mask (threshold)
CFG-NAVSPG-OUTFIL_TDOP	0x301100b2	U2	0.1	-	Output filter time DOP mask (threshold)
CFG-NAVSPG-OUTFIL_PACC	0x301100b3	U2	-	m	Output filter position accuracy mask (threshold)
CFG-NAVSPG-OUTFIL_TACC	0x301100b4	U2	-	m	Output filter time accuracy mask (threshold)
CFG-NAVSPG-OUTFIL_FACC	0x301100b5	U2	0.01	m/s	Output filter frequency accuracy mask (threshold)
CFG-NAVSPG-CONSTR_ALT	0x401100c1	I4	0.01	m	Fixed altitude (mean sea level) for 2D fix mode
CFG-NAVSPG-CONSTR_ALTVAR	0x401100c2	U4	0.0001	m <sup>2</sup>	Fixed altitude variance for 2D mode
CFG-NAVSPG-CONSTR_DGNSSSTO	0x201100c4	U1	-	s	DGNSS timeout

**Table 18: CFG-NAVSPG configuration items**

Constant	Value	Description
2DONLY	1	2D only
3DONLY	2	3D only
AUTO	3	Auto 2D/3D

**Table 19: Constants for CFG-NAVSPG-FIXMODE**

Constant	Value	Description
AUTO	0	Automatic; receiver selects based on GNSS configuration
USNO	3	UTC as operated by the U.S. Naval Observatory (USNO); derived from GPS time
EU	5	UTC as combined from multiple European laboratories; derived from Galileo time

Constant	Value	Description
<i>SU</i>	6	UTC as operated by the former Soviet Union (SU); derived from GLONASS time
<i>NTSC</i>	7	UTC as operated by the National Time Service Center (NTSC), China; derived from BeiDou time

**Table 20: Constants for CFG-NAVSPG-UTCSTANDARD**

Constant	Value	Description
<i>PORT</i>	0	Portable
<i>STAT</i>	2	Stationary
<i>PED</i>	3	Pedestrian
<i>AUTOMOT</i>	4	Automotive
<i>SEA</i>	5	Sea
<i>AIR1</i>	6	Airborne with <1g acceleration
<i>AIR2</i>	7	Airborne with <2g acceleration
<i>AIR4</i>	8	Airborne with <4g acceleration
<i>WRIST</i>	9	Wrist-worn watch (not available in all products)

**Table 21: Constants for CFG-NAVSPG-DYNMODEL**

### 5.9.14 CFG-NMEA: NMEA protocol configuration

This group configures the [NMEA protocol](#). See section [NMEA protocol configuration](#) for a detailed description of the configuration effects on NMEA output.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NMEA-PROTVR</i>	0x20930001	E1	-	-	NMEA protocol version See <a href="#">Table 23</a> below for a list of possible constants for this item.
<i>CFG-NMEA-MAXSVS</i>	0x20930002	E1	-	-	Maximum number of SVs to report per Talker ID See <a href="#">Table 24</a> below for a list of possible constants for this item.
<i>CFG-NMEA-COMPAT</i>	0x10930003	L	-	-	Enable compatibility mode This might be needed for certain applications, e.g. for an NMEA parser that expects a fixed number of digits in position coordinates.
<i>CFG-NMEA-CONSIDER</i>	0x10930004	L	-	-	Enable considering mode This will affect NMEA output used satellite count. If set, also considered satellites (e.g. RAIMED) are counted as used satellites as well.
<i>CFG-NMEA-LIMIT82</i>	0x10930005	L	-	-	Enable strict limit to 82 characters maximum NMEA message length
<i>CFG-NMEA-HIGHPREC</i>	0x10930006	L	-	-	Enable high precision mode This flag cannot be set in conjunction with either <i>CFG-NMEA-COMPAT</i> or <i>CFG-NMEA-LIMIT82</i> mode.
<i>CFG-NMEA-SVNUMBERING</i>	0x20930007	E1	-	-	Display configuration for SVs that do not have value defined in NMEA Configures the display of satellites that do not have an NMEA-defined value. Note: this does not apply to satellites with an unknown ID. See also <a href="#">Satellite Numbering</a> . See <a href="#">Table 25</a> below for a list of possible constants for this item.
<i>CFG-NMEA-FILT_GPS</i>	0x10930011	L	-	-	Disable reporting of GPS satellites
<i>CFG-NMEA-FILT_SBAS</i>	0x10930012	L	-	-	Disable reporting of SBAS satellites
<i>CFG-NMEA-FILT_GAL</i>	0x10930013	L	-	-	Disable reporting of Galileo satellites

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-NMEA-FILT_QZSS</i>	0x10930015	L	-	-	Disable reporting of QZSS satellites
<i>CFG-NMEA-FILT_GLO</i>	0x10930016	L	-	-	Disable reporting of GLONASS satellites
<i>CFG-NMEA-FILT_BDS</i>	0x10930017	L	-	-	Disable reporting of BeiDou satellites
<i>CFG-NMEA-OUT_INVFIX</i>	0x10930021	L	-	-	Enable position output for failed or invalid fixes
<i>CFG-NMEA-OUT_MSKFIX</i>	0x10930022	L	-	-	Enable position output for invalid fixes
<i>CFG-NMEA-OUT_INVTIME</i>	0x10930023	L	-	-	Enable time output for invalid times
<i>CFG-NMEA-OUT_INVDATE</i>	0x10930024	L	-	-	Enable date output for invalid dates
<i>CFG-NMEA-OUT_ONLYGPS</i>	0x10930025	L	-	-	Restrict output to GPS satellites only
<i>CFG-NMEA-OUT_FROZENCOG</i>	0x10930026	L	-	-	Enable course over ground output even if it is frozen
<i>CFG-NMEA-MAINTALKERID</i>	0x20930031	E1	-	-	Main Talker ID
<p>By default the main Talker ID (i.e. the Talker ID used for all messages other than GSV) is determined by the GNSS assignment of the receiver's channels (see <a href="#">CFG-SIGNAL</a>).</p> <p>This field enables the main Talker ID to be overridden.</p> <p>See <a href="#">Table 26</a> below for a list of possible constants for this item.</p>					
<i>CFG-NMEA-GSVTALKERID</i>	0x20930032	E1	-	-	Talker ID for GSV NMEA messages
<p>By default the Talker ID for GSV messages is GNSS-specific (as defined by NMEA).</p> <p>This field enables the GSV Talker ID to be overridden.</p> <p>See <a href="#">Table 27</a> below for a list of possible constants for this item.</p>					
<i>CFG-NMEA-BDSTALKERID</i>	0x30930033	U2	-	-	BeiDou Talker ID
<p>Sets the two ASCII characters that should be used for the BeiDou Talker ID.</p> <p>If these are set to zero, the default BeiDou Talker ID will be used.</p>					

**Table 22: CFG-NMEA configuration items**

Constant	Value	Description
<i>V21</i>	21	NMEA protocol version 2.1
<i>V23</i>	23	NMEA protocol version 2.3
<i>V40</i>	40	NMEA protocol version 4.0 (not available in all products)
<i>V41</i>	41	NMEA protocol version 4.10 (not available in all products)
<i>V411</i>	42	NMEA protocol version 4.11 (not available in all products)

**Table 23: Constants for CFG-NMEA-PROTVR**

Constant	Value	Description
<i>UNLIM</i>	0	Unlimited
<i>8SVS</i>	8	8 SVs
<i>12SVS</i>	12	12 SVs
<i>16SVS</i>	16	16 SVs

**Table 24: Constants for CFG-NMEA-MAXSVS**

Constant	Value	Description
<i>STRICT</i>	0	Strict - satellites are not output
<i>EXTENDED</i>	1	Extended - use proprietary numbering

**Table 25: Constants for CFG-NMEA-SVNUMBERING**

Constant	Value	Description
<i>AUTO</i>	0	Main Talker ID is not overridden

Constant	Value	Description
<i>GP</i>	1	Set main Talker ID to 'GP'
<i>GL</i>	2	Set main Talker ID to 'GL'
<i>GN</i>	3	Set main Talker ID to 'GN'
<i>GA</i>	4	Set main Talker ID to 'GA' (not available in all products)
<i>GB</i>	5	Set main Talker ID to 'GB' (not available in all products)
<i>GQ</i>	7	Set main Talker ID to 'GQ' (not available in all products)

**Table 26: Constants for CFG-NMEA-MAINTALKERID**

Constant	Value	Description
<i>GNSS</i>	0	Use GNSS-specific Talker ID (as defined by NMEA)
<i>MAIN</i>	1	Use the main Talker ID

**Table 27: Constants for CFG-NMEA-GSVTALKERID**

### 5.9.15 CFG-ODO: Odometer and low-speed course over ground filter configuration

The items in this group allow the user to configure the Odometer feature and Low-Speed Course Over Ground Filter.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-ODO-USE_ODO</i>	0x10220001	L	-	-	Use odometer
<i>CFG-ODO-USE_COG</i>	0x10220002	L	-	-	Use low-speed course over ground filter
<i>CFG-ODO-OUTLPVEL</i>	0x10220003	L	-	-	Output low-pass filtered velocity
<i>CFG-ODO-OUTLPCOG</i>	0x10220004	L	-	-	Output low-pass filtered course over ground (heading)
<i>CFG-ODO-PROFILE</i>	0x20220005	E1	-	-	Odometer profile configuration See <a href="#">Table 29</a> below for a list of possible constants for this item.
<i>CFG-ODO-COGMAXSPEED</i>	0x20220021	U1	-	m/s	Upper speed limit for low-speed course over ground filter
<i>CFG-ODO-COGMAXPOSACC</i>	0x20220022	U1	-	-	Maximum acceptable position accuracy for computing low-speed filtered course over ground
<i>CFG-ODO-VELLPGAIN</i>	0x20220031	U1	-	-	Velocity low-pass filter level Range is from 0 to 255.
<i>CFG-ODO-COGLPGAIN</i>	0x20220032	U1	-	-	Course over ground low-pass filter level (at speed < 8 m/s) Range is from 0 to 255.

**Table 28: CFG-ODO configuration items**

Constant	Value	Description
<i>RUN</i>	0	Running
<i>CYCL</i>	1	Cycling
<i>SWIM</i>	2	Swimming
<i>CAR</i>	3	Car

Constant	Value	Description
<i>CUSTOM</i>	4	Custom

**Table 29: Constants for CFG-ODO-PROFILE**

### 5.9.16 CFG-RATE: Navigation and measurement rate configuration

The configuration items in this group allow the user to alter the rate at which navigation solutions (and the measurements that they depend on) are generated by the receiver. The calculation of the navigation solution will always be aligned to the top of a second zero (first second of the week) of the configured reference time system. The navigation period is an integer multiple of the measurement period.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-RATE-MEAS</i>	0x30210001	U2	0.001	s	Nominal time between GNSS measurements E.g. 100 ms results in 10 Hz measurement rate, 1000 ms = 1 Hz measurement rate. The minimum value is 25.
<i>CFG-RATE-NAV</i>	0x30210002	U2	-	-	Ratio of number of measurements to number of navigation solutions E.g. 5 means five measurements for every navigation solution. The minimum value is 1. The maximum value is 128.
<i>CFG-RATE-TIMEREf</i>	0x20210003	E1	-	-	Time system to which measurements are aligned See <a href="#">Table 31</a> below for a list of possible constants for this item.

**Table 30: CFG-RATE configuration items**

Constant	Value	Description
<i>UTC</i>	0	Align measurements to UTC time
<i>GPS</i>	1	Align measurements to GPS time
<i>GLO</i>	2	Align measurements to GLONASS time
<i>BDS</i>	3	Align measurements to BeiDou time
<i>GAL</i>	4	Align measurements to Galileo time

**Table 31: Constants for CFG-RATE-TIMEREf**

### 5.9.17 CFG-RINV: Remote inventory

The remote inventory enables storing user-defined data in the non-volatile memory of the receiver. The data can be either binary or a string of ASCII characters. In the latter case, it can optionally be output at startup after the boot screen.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-RINV-DUMP</i>	0x10c70001	L	-	-	Dump data at startup When true, data will be dumped to the interface on startup, unless CFG-RINV-BINARY is set.
<i>CFG-RINV-BINARY</i>	0x10c70002	L	-	-	Data is binary When true, the data is treated as binary data.
<i>CFG-RINV-DATA_SIZE</i>	0x20c70003	U1	-	-	Size of data Size of data to store/be stored in the remote inventory (maximum 30 bytes).
<i>CFG-RINV-CHUNK0</i>	0x50c70004	X8	-	-	Data bytes 1-8 (LSB) Data to store/be stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.
<i>CFG-RINV-CHUNK1</i>	0x50c70005	X8	-	-	Data bytes 9-16 Data to store/be stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.
<i>CFG-RINV-CHUNK2</i>	0x50c70006	X8	-	-	Data bytes 17-24 Data to store/be stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-RINV-CHUNK3</i>	0x50c70007	X8	-	-	Data bytes 25-30 (MSB)

Data to store/be stored in remote inventory - max 6 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.

**Table 32: CFG-RINV configuration items**

### 5.9.18 CFG-RTCM: RTCM protocol configuration

Configures the RTCM protocol.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-RTCM-DF003_OUT</i>	0x30090001	U2	-	-	RTCM DF003 (Reference station ID) output value
					Value to set in RTCM data field DF003 (Reference station ID) in RTCM output messages containing DF003. The value can be 0..4095.
<i>CFG-RTCM-DF003_IN</i>	0x30090008	U2	-	-	RTCM DF003 (Reference station ID) input value
					Value to use for filtering out RTCM input messages based on their DF003 data field (Reference station ID) value. To be used in conjunction with <i>CFG-RTCM-DF003_IN_FILTER</i> . The value can be 0..4095.
<i>CFG-RTCM-DF003_IN_FILTER</i>	0x20090009	E1	-	-	RTCM input filter configuration based on RTCM DF003 (Reference station ID) value
					Configures if and how the filtering out of RTCM input messages based on their DF003 data field (Reference station ID) operates.
					See <a href="#">Table 34</a> below for a list of possible constants for this item.

**Table 33: CFG-RTCM configuration items**

Constant	Value	Description
<i>DISABLED</i>	0	Disabled RTCM input filter; all input messages allowed
<i>RELAXED</i>	1	Relaxed RTCM input filter; input messages allowed must contain a DF003 data field matching the <i>CFG-RTCM-DF003_IN</i> value or not contain by specification the DF003 data field
<i>STRICT</i>	2	Strict RTCM input filter; input messages allowed must contain a DF003 data field matching the <i>CFG-RTCM-DF003</i> value

**Table 34: Constants for CFG-RTCM-DF003\_IN\_FILTER**

### 5.9.19 CFG-SBAS: SBAS configuration

This group configures the SBAS receiver subsystem (i.e. WAAS, EGNOS, MSAS). See the *SBAS configuration settings description* in the [Integration manual](#) for a detailed description of how these settings affect receiver operation.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SBAS-USE_TESTMODE</i>	0x10360002	L	-	-	Use SBAS data when it is in test mode (SBAS msg 0)
<i>CFG-SBAS-USE_RANGING</i>	0x10360003	L	-	-	Use SBAS GEOs as a ranging source (for navigation)
<i>CFG-SBAS-USE_DIFFCORR</i>	0x10360004	L	-	-	Use SBAS differential corrections
<i>CFG-SBAS-USE_INTEGRITY</i>	0x10360005	L	-	-	Use SBAS integrity information
					If enabled, the receiver will only use GPS satellites for which integrity information is available
<i>CFG-SBAS-PRNSCANMASK</i>	0x50360006	X8	-	-	SBAS PRN search configuration
					This configuration item determines which SBAS PRNs should be searched. Setting it to 0 indicates auto-scanning all SBAS PRNs. For non-zero values the bits correspond to the allocated SBAS PRNs ranging from PRN120 (bit 0) to PRN158 (bit 38), where a bit set enables searching for the corresponding PRN.
					See <a href="#">Table 36</a> below for a list of possible constants for this item.

**Table 35: CFG-SBAS configuration items**

Constant	Value	Description
<i>ALL</i>	0x0000000000000000	Enable search for all SBAS PRNs
<i>PRN120</i>	0x0000000000000001	Enable search for SBAS PRN120
<i>PRN121</i>	0x0000000000000002	Enable search for SBAS PRN121
<i>PRN122</i>	0x0000000000000004	Enable search for SBAS PRN122
<i>PRN123</i>	0x0000000000000008	Enable search for SBAS PRN123
<i>PRN124</i>	0x0000000000000010	Enable search for SBAS PRN124
<i>PRN125</i>	0x0000000000000020	Enable search for SBAS PRN125
<i>PRN126</i>	0x0000000000000040	Enable search for SBAS PRN126
<i>PRN127</i>	0x0000000000000080	Enable search for SBAS PRN127
<i>PRN128</i>	0x0000000000000100	Enable search for SBAS PRN128
<i>PRN129</i>	0x0000000000000200	Enable search for SBAS PRN129
<i>PRN130</i>	0x0000000000000400	Enable search for SBAS PRN130
<i>PRN131</i>	0x0000000000000800	Enable search for SBAS PRN131
<i>PRN132</i>	0x0000000000001000	Enable search for SBAS PRN132
<i>PRN133</i>	0x0000000000002000	Enable search for SBAS PRN133
<i>PRN134</i>	0x0000000000004000	Enable search for SBAS PRN134
<i>PRN135</i>	0x0000000000008000	Enable search for SBAS PRN135
<i>PRN136</i>	0x0000000000010000	Enable search for SBAS PRN136
<i>PRN137</i>	0x0000000000020000	Enable search for SBAS PRN137
<i>PRN138</i>	0x0000000000040000	Enable search for SBAS PRN138
<i>PRN139</i>	0x0000000000080000	Enable search for SBAS PRN139
<i>PRN140</i>	0x0000000000100000	Enable search for SBAS PRN140
<i>PRN141</i>	0x0000000000200000	Enable search for SBAS PRN141
<i>PRN142</i>	0x0000000000400000	Enable search for SBAS PRN142
<i>PRN143</i>	0x0000000000800000	Enable search for SBAS PRN143
<i>PRN144</i>	0x0000000001000000	Enable search for SBAS PRN144
<i>PRN145</i>	0x0000000002000000	Enable search for SBAS PRN145
<i>PRN146</i>	0x0000000004000000	Enable search for SBAS PRN146
<i>PRN147</i>	0x0000000008000000	Enable search for SBAS PRN147
<i>PRN148</i>	0x0000000010000000	Enable search for SBAS PRN148
<i>PRN149</i>	0x0000000020000000	Enable search for SBAS PRN149
<i>PRN150</i>	0x0000000040000000	Enable search for SBAS PRN150
<i>PRN151</i>	0x0000000080000000	Enable search for SBAS PRN151
<i>PRN152</i>	0x0000000100000000	Enable search for SBAS PRN152
<i>PRN153</i>	0x0000000200000000	Enable search for SBAS PRN153
<i>PRN154</i>	0x0000000400000000	Enable search for SBAS PRN154
<i>PRN155</i>	0x0000000800000000	Enable search for SBAS PRN155
<i>PRN156</i>	0x0000001000000000	Enable search for SBAS PRN156
<i>PRN157</i>	0x0000002000000000	Enable search for SBAS PRN157

Constant	Value	Description
PRN158	0x0000004000000000	Enable search for SBAS PRN158

**Table 36: Constants for CFG-SBAS-PRNSCANMASK**

## 5.9.20 CFG-SEC: Security configuration

Security configuration.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SEC-CFG_LOCK	0x10f60009	L	-	-	Configuration lockdown When set, receiver configuration is locked and cannot be changed any more.
CFG-SEC-CFG_LOCK_UNLOCKGRP1	0x30f6000a	U2	-	-	Configuration lockdown exempted group 1 This item can be set before enabling the configuration lockdown. It will make writes to the specified group possible after the configuration lockdown has been enabled.
CFG-SEC-CFG_LOCK_UNLOCKGRP2	0x30f6000b	U2	-	-	Configuration lockdown exempted group 2 This item can be set before enabling the configuration lockdown. It will make writes to the specified group possible after the configuration lockdown has been enabled.

**Table 37: CFG-SEC configuration items**

## 5.9.21 CFG-SIGNAL: Satellite systems (GNSS) signal configuration

The enable items for individual signals are governed by their corresponding constellation enable item. It is necessary that at least one signal from a major GNSS constellation is enabled. See *GNSS signal configuration* in the [Integration manual](#) for more details.

Configuration specific to a GNSS system is available in other groups (e.g. CFG-SBAS).

Note that changes to any items within this group will trigger a reset to the GNSS subsystem.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SIGNAL-GPS_ENA	0x1031001f	L	-	-	GPS enable
CFG-SIGNAL-GPS_L1CA_ENA	0x10310001	L	-	-	GPS L1C/A
CFG-SIGNAL-GPS_L5_ENA	0x10310004	L	-	-	GPS L5
CFG-SIGNAL-SBAS_ENA	0x10310020	L	-	-	SBAS enable
CFG-SIGNAL-SBAS_L1CA_ENA	0x10310005	L	-	-	SBAS L1C/A
CFG-SIGNAL-GAL_ENA	0x10310021	L	-	-	Galileo enable
CFG-SIGNAL-GAL_E1_ENA	0x10310007	L	-	-	Galileo E1
CFG-SIGNAL-GAL_E5A_ENA	0x10310009	L	-	-	Galileo E5a
CFG-SIGNAL-BDS_ENA	0x10310022	L	-	-	BeiDou Enable
CFG-SIGNAL-BDS_B1_ENA	0x1031000d	L	-	-	BeiDou B1I
CFG-SIGNAL-BDS_B1C_ENA	0x1031000f	L	-	-	BeiDou B1C
CFG-SIGNAL-BDS_B2A_ENA	0x10310028	L	-	-	BeiDou B2a
CFG-SIGNAL-QZSS_ENA	0x10310024	L	-	-	QZSS enable
CFG-SIGNAL-QZSS_L1CA_ENA	0x10310012	L	-	-	QZSS L1C/A
CFG-SIGNAL-QZSS_L5_ENA	0x10310017	L	-	-	QZSS L5
CFG-SIGNAL-GLO_ENA	0x10310025	L	-	-	GLONASS enable

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SIGNAL-GLO_L1_ENA</i>	0x10310018	L	-	-	GLONASS L1

**Table 38: CFG-SIGNAL configuration items**

### 5.9.22 CFG-SPI: Configuration of the SPI interface

Settings needed to configure the SPI communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SPI-MAXFF</i>	0x20640001	U1	-	-	Number of bytes containing 0xFF to receive before switching off reception. Range: 0 (mechanism off) - 63
<i>CFG-SPI-CPOLARITY</i>	0x10640002	L	-	-	Clock polarity select: 0: Active High Clock, SCLK idles low, 1: Active Low Clock, SCLK idles high
<i>CFG-SPI-CPHASE</i>	0x10640003	L	-	-	Clock phase select: 0: Data captured on first edge of SCLK, 1: Data captured on second edge of SCLK
<i>CFG-SPI-EXTENDEDTIMEOUT</i>	0x10640005	L	-	-	Flag to disable timeouting the interface after 1.5s
<i>CFG-SPI-ENABLED</i>	0x10640006	L	-	-	Flag to indicate if the SPI interface should be enabled

**Table 39: CFG-SPI configuration items**

### 5.9.23 CFG-SPIINPROT: Input protocol configuration of the SPI interface

Input protocol enable flags of the SPI interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SPIINPROT-UBX</i>	0x10790001	L	-	-	Flag to indicate if UBX should be an input protocol on SPI
<i>CFG-SPIINPROT-NMEA</i>	0x10790002	L	-	-	Flag to indicate if NMEA should be an input protocol on SPI
<i>CFG-SPIINPROT-RTCM3X</i>	0x10790004	L	-	-	Flag to indicate if RTCM3X should be an input protocol on SPI

**Table 40: CFG-SPIINPROT configuration items**

### 5.9.24 CFG-SPIOUTPROT: Output protocol configuration of the SPI interface

Output protocol enable flags of the SPI interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-SPIOUTPROT-UBX</i>	0x107a0001	L	-	-	Flag to indicate if UBX should be an output protocol on SPI
<i>CFG-SPIOUTPROT-NMEA</i>	0x107a0002	L	-	-	Flag to indicate if NMEA should be an output protocol on SPI
<i>CFG-SPIOUTPROT-RTCM3X</i>	0x107a0004	L	-	-	Flag to indicate if RTCM3X should be an output protocol on SPI

**Table 41: CFG-SPIOUTPROT configuration items**

### 5.9.25 CFG-TMODE: Time mode configuration

Configuration for operation of the receiver in Time mode. The position referred to in the configuration items is that of the Antenna Reference Point (ARP).

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TMODE-MODE</i>	0x20030001	E1	-	-	Receiver mode

Configuration item	Key ID	Type	Scale	Unit	Description
See <a href="#">Table 43</a> below for a list of possible constants for this item.					
<i>CFG-TMODE-POS_TYPE</i>	0x20030002	E1	-	-	Determines whether the ARP position is given in ECEF or LAT/LON/HEIGHT?
See <a href="#">Table 44</a> below for a list of possible constants for this item.					
<i>CFG-TMODE-ECEF_X</i>	0x40030003	I4	-	cm	ECEF X coordinate of the ARP position. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=ECEF.
<i>CFG-TMODE-ECEF_Y</i>	0x40030004	I4	-	cm	ECEF Y coordinate of the ARP position. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=ECEF.
<i>CFG-TMODE-ECEF_Z</i>	0x40030005	I4	-	cm	ECEF Z coordinate of the ARP position. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=ECEF.
<i>CFG-TMODE-ECEF_X_HP</i>	0x20030006	I1	0.1	mm	High-precision ECEF X coordinate of the ARP position. Accepted range is -99 to +99. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=ECEF.
<i>CFG-TMODE-ECEF_Y_HP</i>	0x20030007	I1	0.1	mm	High-precision ECEF Y coordinate of the ARP position. Accepted range is -99 to +99. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=ECEF.
<i>CFG-TMODE-ECEF_Z_HP</i>	0x20030008	I1	0.1	mm	High-precision ECEF Z coordinate of the ARP position. Accepted range is -99 to +99. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=ECEF.
<i>CFG-TMODE-LAT</i>	0x40030009	I4	1e-7	deg	Latitude of the ARP position. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=LLH.
<i>CFG-TMODE-LON</i>	0x4003000a	I4	1e-7	deg	Longitude of the ARP position. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=LLH.
<i>CFG-TMODE-HEIGHT</i>	0x4003000b	I4	-	cm	Height of the ARP position. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=LLH.
<i>CFG-TMODE-LAT_HP</i>	0x2003000c	I1	1e-9	deg	High-precision latitude of the ARP position Accepted range is -99 to +99. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=LLH.
<i>CFG-TMODE-LON_HP</i>	0x2003000d	I1	1e-9	deg	High-precision longitude of the ARP position. Accepted range is -99 to +99. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=LLH.
<i>CFG-TMODE-HEIGHT_HP</i>	0x2003000e	I1	0.1	mm	High-precision height of the ARP position. Accepted range is -99 to +99. This will only be used if CFG-TMODE-MODE=FIXED and CFG-TMODE-POS_TYPE=LLH.
<i>CFG-TMODE-FIXED_POS_ACC</i>	0x4003000f	U4	0.1	mm	Fixed position 3D accuracy
<i>CFG-TMODE-SVIN_MIN_DUR</i>	0x40030010	U4	-	s	Survey-in minimum duration This will only be used if CFG-TMODE-MODE=SURVEY_IN.
<i>CFG-TMODE-SVIN_ACC_LIMIT</i>	0x40030011	U4	0.1	mm	Survey-in position accuracy limit This will only be used if CFG-TMODE-MODE=SURVEY_IN.

**Table 42: CFG-TMODE configuration items**

Constant	Value	Description
<i>DISABLED</i>	0	Disabled

Constant	Value	Description
<i>SURVEY_IN</i>	1	Survey in
<i>FIXED</i>	2	Fixed mode (true ARP position information required)

**Table 43: Constants for CFG-TMODE-MODE**

Constant	Value	Description
<i>ECEF</i>	0	Position is ECEF
<i>LLH</i>	1	Position is Lat/Lon/Height

**Table 44: Constants for CFG-TMODE-POS\_TYPE**

## 5.9.26 CFG-TP: Timepulse configuration

Use this group to configure the generation of timepulses.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TP-PULSE_DEF</i>	0x20050023	E1	-	-	Determines whether the time pulse is interpreted as frequency or period
See <a href="#">Table 46</a> below for a list of possible constants for this item.					
<i>CFG-TP-PULSE_LENGTH_DEF</i>	0x20050030	E1	-	-	Determines whether the time pulse length is interpreted as length[us] or pulse ratio[%]
See <a href="#">Table 47</a> below for a list of possible constants for this item.					
<i>CFG-TP-ANT_CABLEDELAY</i>	0x30050001	I2	1e-9	s	Antenna cable delay
<i>CFG-TP-PERIOD_TP1</i>	0x40050002	U4	1e-6	s	Time pulse period (TP1)
<i>CFG-TP-PERIOD_LOCK_TP1</i>	0x40050003	U4	1e-6	s	Time pulse period when locked to GNSS time (TP1)
Only used if <i>CFG-TP-USE_LOCKED_TP1</i> is set.					
<i>CFG-TP-FREQ_TP1</i>	0x40050024	U4	-	Hz	Time pulse frequency (TP1)
This will only be used if <i>CFG-TP-PULSE_DEF</i> =FREQ.					
<i>CFG-TP-FREQ_LOCK_TP1</i>	0x40050025	U4	-	Hz	Time pulse frequency when locked to GNSS time (TP1)
Only used if <i>CFG-TP-USE_LOCKED_TP1</i> is set.					
<i>CFG-TP-LEN_TP1</i>	0x40050004	U4	1e-6	s	Time pulse length (TP1)
<i>CFG-TP-LEN_LOCK_TP1</i>	0x40050005	U4	1e-6	s	Time pulse length when locked to GNSS time (TP1)
Only used if <i>CFG-TP-USE_LOCKED_TP1</i> is set.					
<i>CFG-TP-DUTY_TP1</i>	0x5005002a	R8	-	%	Time pulse duty cycle (TP1)
Only used if <i>CFG-TP-PULSE_LENGTH_DEF</i> =RATIO is set.					
<i>CFG-TP-DUTY_LOCK_TP1</i>	0x5005002b	R8	-	%	Time pulse duty cycle when locked to GNSS time (TP1)
Only used if <i>CFG-TP-PULSE_LENGTH_DEF</i> =RATIO and <i>CFG-TP-USE_LOCKED_TP1</i> are set.					
<i>CFG-TP-USER_DELAY_TP1</i>	0x40050006	I4	1e-9	s	User-configurable time pulse delay (TP1)
<i>CFG-TP-TP1_ENA</i>	0x10050007	L	-	-	Enable the first timepulse
if pin associated with time pulse is assigned for another function, the other function takes precedence. Must be set for frequency-time products.					
<i>CFG-TP-SYNC_GNSS_TP1</i>	0x10050008	L	-	-	Sync time pulse to GNSS time or local clock (TP1)
If set, sync to GNSS if GNSS time is valid otherwise, if not set or not available, use local clock. Ignored by time-frequency product variants, which will attempt to use the best available time/frequency reference (not necessarily GNSS). This flag can be unset only in Timing product variants.					

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TP-USE_LOCKED_TP1</i>	0x10050009	L	-	-	Use locked parameters when possible (TP1) If set, use CFG-TP-PERIOD_LOCK_TP1 and CFG-TP-LEN_LOCK_TP1 as soon as GNSS time is valid. Otherwise if not valid or not set, use CFG-TP-PERIOD_TP1 and CFG-TP-LEN_TP1.
<i>CFG-TP-ALIGN_TO_TOW_TP1</i>	0x1005000a	L	-	-	Align time pulse to top of second (TP1) To use this feature, CFG-TP-USE_LOCKED_TP1 must be set. Time pulse period must be an integer fraction of 1 second. Ignored in time-frequency product variants, where it is assumed always enabled.
<i>CFG-TP-POL_TP1</i>	0x1005000b	L	-	-	Set time pulse polarity (TP1) false (0) : falling edge at top of second. true (1) : rising edge at top of second.
<i>CFG-TP-TIMEGRID_TP1</i>	0x2005000c	E1	-	-	Time grid to use (TP1) Only relevant if CFG-TP-USE_LOCKED_TP1 and ALIGN_TO_TOW_TP1 are set. Note that configured GNSS time is estimated by the receiver if locked to any GNSS system. If the receiver has a valid GNSS fix it will attempt to steer the TP to the specified time grid even if the specified time is not based on information from the constellation's satellites. To ensure timing based purely on a given GNSS, restrict the supported constellations in CFG-SIGNAL-*. See <a href="#">Table 48</a> below for a list of possible constants for this item.
<i>CFG-TP-PERIOD_TP2</i>	0x4005000d	U4	1e-6	s	Time pulse period (TP2)
<i>CFG-TP-PERIOD_LOCK_TP2</i>	0x4005000e	U4	1e-6	s	Time pulse period when locked to GNSS time (TP2) Only used if CFG-TP-USE_LOCKED_TP2 is set.
<i>CFG-TP-FREQ_TP2</i>	0x40050026	U4	-	Hz	Time pulse frequency (TP2) Only used if CFG-TP-PULSE_DEF=FREQ.
<i>CFG-TP-FREQ_LOCK_TP2</i>	0x40050027	U4	-	Hz	Time pulse frequency when locked to GNSS time (TP2) Only used if CFG-TP-USE_LOCKED_TP2 is set.
<i>CFG-TP-LEN_TP2</i>	0x4005000f	U4	1e-6	s	Time pulse length (TP2)
<i>CFG-TP-LEN_LOCK_TP2</i>	0x40050010	U4	1e-6	s	Time pulse length when locked to GNSS time (TP2) Only used if CFG-TP-USE_LOCKED_TP2 is set.
<i>CFG-TP-DUTY_TP2</i>	0x5005002c	R8	-	%	Time pulse duty cycle (TP2) Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO is set.
<i>CFG-TP-DUTY_LOCK_TP2</i>	0x5005002d	R8	-	%	Time pulse duty cycle when locked to GNSS time (TP2) Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO and CFG-TP-USE_LOCKED_TP2 are set.
<i>CFG-TP-USER_DELAY_TP2</i>	0x40050011	I4	1e-9	s	User-configurable time pulse delay (TP2)
<i>CFG-TP-TP2_ENA</i>	0x10050012	L	-	-	Enable the second timepulse
<i>CFG-TP-SYNC_GNSS_TP2</i>	0x10050013	L	-	-	Sync time pulse to GNSS time or local clock (TP2) If set, sync to GNSS if GNSS time is valid otherwise, if not set or not available, use local clock. Ignored by time-frequency product variants, which will attempt to use the best available time/frequency reference (not necessarily GNSS). This flag can be unset only in Timing product variants.
<i>CFG-TP-USE_LOCKED_TP2</i>	0x10050014	L	-	-	Use locked parameters when possible (TP2) If set, use CFG-TP-PERIOD_LOCK_TP2 and CFG-TP-LEN_LOCK_TP2 as soon as GNSS time is valid. Otherwise if not valid or not set, use CFG-TP-PERIOD_TP2 and CFG-TP-LEN_TP2.
<i>CFG-TP-ALIGN_TO_TOW_TP2</i>	0x10050015	L	-	-	Align time pulse to top of second (TP2)

Configuration item	Key ID	Type	Scale	Unit	Description
To use this feature, CFG-TP-USE_LOCKED_TP2 must be set. Time pulse period must be an integer fraction of 1 second. Ignored in time-frequency product variants, where it is assumed always enabled. Set maxSlewRate and maxPhaseCorrRate fields of UBX-CFG-SMGR to 0 to disable alignment.					
CFG-TP-POL_TP2	0x10050016	L	-	-	Set time pulse polarity (TP2)  false (0) : falling edge at top of second. true (1) : rising edge at top of second.
CFG-TP-TIMEGRID_TP2	0x20050017	E1	-	-	Time grid to use (TP2)  Only relevant if CFG-TP-USE_LOCKED_TP1 and ALIGN_TO_TOW_TP1 are set. Note that configured GNSS time is estimated by the receiver if locked to any GNSS system. If the receiver has a valid GNSS fix it will attempt to steer the TP to the specified time grid even if the specified time is not based on information from the constellation's satellites. To ensure timing based purely on a given GNSS, restrict the supported constellations in CFG-SIGNAL-*. See <a href="#">Table 49</a> below for a list of possible constants for this item.
CFG-TP-DRSTR_TP1	0x20050035	E1	-	-	Set drive strength of TP1  Time Pulse pin 1 (TP1) can support 4 possible drive strength cases: 2, 4, 8 and 12 mA See <a href="#">Table 50</a> below for a list of possible constants for this item.
CFG-TP-DRSTR_TP2	0x20050036	E1	-	-	Set drive strength of TP2  Time Pulse pin 2 (TP2) can support 4 possible drive strength cases: 2, 4, 8 and 12 mA See <a href="#">Table 51</a> below for a list of possible constants for this item.

**Table 45: CFG-TP configuration items**

Constant	Value	Description
PERIOD	0	Time pulse period [us]
FREQ	1	Time pulse frequency [Hz]

**Table 46: Constants for CFG-TP-PULSE\_DEF**

Constant	Value	Description
RATIO	0	Time pulse ratio
LENGTH	1	Time pulse length

**Table 47: Constants for CFG-TP-PULSE\_LENGTH\_DEF**

Constant	Value	Description
UTC	0	UTC time reference
GPS	1	GPS time reference
GLO	2	GLONASS time reference
BDS	3	BeiDou time reference
GAL	4	Galileo time reference

**Table 48: Constants for CFG-TP-TIMEGRID\_TP1**

<i>DRIVE_STRENGTH_8MA</i>	2	8 mA drive strength
<i>DRIVE_STRENGTH_12MA</i>	3	12 mA drive strength

**Table 51: Constants for CFG-TP-DRSTR\_TP2**

### 5.9.27 CFG-TXREADY: TX ready configuration

Configuration of the TX ready pin.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-TXREADY-ENABLED</i>	0x10a20001	L	-	-	Flag to indicate if TX ready pin mechanism should be enabled
<i>CFG-TXREADY-POLARITY</i>	0x10a20002	L	-	-	The polarity of the TX ready pin: false:high-active, true:low-active
<i>CFG-TXREADY-PIN</i>	0x20a20003	U1	-	-	Pin number to use for the TX ready functionality
<i>CFG-TXREADY-THRESHOLD</i>	0x30a20004	U2	-	-	Amount of data that should be ready on the interface before triggering the TX ready pin
<i>CFG-TXREADY-INTERFACE</i>	0x20a20005	E1	-	-	Interface where the TX ready feature should be linked to

See [Table 53](#) below for a list of possible constants for this item.

**Table 52: CFG-TXREADY configuration items**

Constant	Value	Description
<i>I2C</i>	0	I2C interface
<i>SPI</i>	1	SPI interface

**Table 53: Constants for CFG-TXREADY-INTERFACE**

### 5.9.28 CFG-UART1: Configuration of the UART1 interface

Settings needed to configure the UART1 communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART1-BAUDRATE</i>	0x40520001	U4	-	-	The baud rate that should be configured on the UART1
<i>CFG-UART1-STOPBITS</i>	0x20520002	E1	-	-	Number of stopbits that should be used on UART1

See [Table 55](#) below for a list of possible constants for this item.

<i>CFG-UART1-DATABITS</i>	0x20520003	E1	-	-	Number of databits that should be used on UART1
---------------------------	------------	----	---	---	---

See [Table 56](#) below for a list of possible constants for this item.

<i>CFG-UART1-PARITY</i>	0x20520004	E1	-	-	Parity mode that should be used on UART1
-------------------------	------------	----	---	---	--

See [Table 57](#) below for a list of possible constants for this item.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART1-ENABLED</i>	0x10520005	L	-	-	Flag to indicate if the UART1 should be enabled

**Table 54: CFG-UART1 configuration items**

Constant	Value	Description
<i>HALF</i>	0	0.5 stopbits
<i>ONE</i>	1	1.0 stopbits
<i>ONEHALF</i>	2	1.5 stopbits
<i>TWO</i>	3	2.0 stopbits

**Table 55: Constants for CFG-UART1-STOPBITS**

Constant	Value	Description
<i>EIGHT</i>	0	8 databits
<i>SEVEN</i>	1	7 databits

**Table 56: Constants for CFG-UART1-DATABITS**

Constant	Value	Description
<i>NONE</i>	0	No parity bit
<i>ODD</i>	1	Add an odd parity bit
<i>EVEN</i>	2	Add an even parity bit

**Table 57: Constants for CFG-UART1-PARITY**

### 5.9.29 CFG-UART1INPROT: Input protocol configuration of the UART1 interface

Input protocol enable flags of the UART1 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART1INPROT-UBX</i>	0x10730001	L	-	-	Flag to indicate if UBX should be an input protocol on UART1
<i>CFG-UART1INPROT-NMEA</i>	0x10730002	L	-	-	Flag to indicate if NMEA should be an input protocol on UART1
<i>CFG-UART1INPROT-RTCM3X</i>	0x10730004	L	-	-	Flag to indicate if RTCM3X should be an input protocol on UART1

**Table 58: CFG-UART1INPROT configuration items**

### 5.9.30 CFG-UART1OUTPROT: Output protocol configuration of the UART1 interface

Output protocol enable flags of the UART1 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART1OUTPROT-UBX</i>	0x10740001	L	-	-	Flag to indicate if UBX should be an output protocol on UART1
<i>CFG-UART1OUTPROT-NMEA</i>	0x10740002	L	-	-	Flag to indicate if NMEA should be an output protocol on UART1
<i>CFG-UART1OUTPROT-RTCM3X</i>	0x10740004	L	-	-	Flag to indicate if RTCM3X should be an output protocol on UART1

**Table 59: CFG-UART1OUTPROT configuration items**

### 5.9.31 CFG-UART2: Configuration of the UART2 interface

Settings needed to configure the UART2 communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART2-BAUDRATE</i>	0x40530001	U4	-	-	The baud rate that should be configured on the UART2
<i>CFG-UART2-STOPBITS</i>	0x20530002	E1	-	-	Number of stopbits that should be used on UART2
See <a href="#">Table 61</a> below for a list of possible constants for this item.					
<i>CFG-UART2-DATABITS</i>	0x20530003	E1	-	-	Number of databits that should be used on UART2
See <a href="#">Table 62</a> below for a list of possible constants for this item.					
<i>CFG-UART2-PARITY</i>	0x20530004	E1	-	-	Parity mode that should be used on UART2
See <a href="#">Table 63</a> below for a list of possible constants for this item.					
<i>CFG-UART2-ENABLED</i>	0x10530005	L	-	-	Flag to indicate if the UART2 should be enabled
<i>CFG-UART2-REMAP</i>	0x10530006	L	-	-	UART2 Remapping

**Table 60: CFG-UART2 configuration items**

Constant	Value	Description
<i>HALF</i>	0	0.5 stopbits
<i>ONE</i>	1	1.0 stopbits
<i>ONEHALF</i>	2	1.5 stopbits
<i>TWO</i>	3	2.0 stopbits

**Table 61: Constants for CFG-UART2-STOPBITS**

Constant	Value	Description
<i>EIGHT</i>	0	8 databits
<i>SEVEN</i>	1	7 databits

**Table 62: Constants for CFG-UART2-DATABITS**

Constant	Value	Description
<i>NONE</i>	0	No parity bit
<i>ODD</i>	1	Add an odd parity bit
<i>EVEN</i>	2	Add an even parity bit

**Table 63: Constants for CFG-UART2-PARITY**

### 5.9.32 CFG-UART2INPROT: Input protocol configuration of the UART2 interface

Input protocol enable flags of the UART2 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART2INPROT-UBX</i>	0x10750001	L	-	-	Flag to indicate if UBX should be an input protocol on UART2
<i>CFG-UART2INPROT-NMEA</i>	0x10750002	L	-	-	Flag to indicate if NMEA should be an input protocol on UART2
<i>CFG-UART2INPROT-RTCM3X</i>	0x10750004	L	-	-	Flag to indicate if RTCM3X should be an input protocol on UART2

**Table 64: CFG-UART2INPROT configuration items**

### 5.9.33 CFG-UART2OUTPROT: Output protocol configuration of the UART2 interface

Output protocol enable flags of the UART2 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-UART2OUTPROT-UBX</i>	0x10760001	L	-	-	Flag to indicate if UBX should be an output protocol on UART2
<i>CFG-UART2OUTPROT-NMEA</i>	0x10760002	L	-	-	Flag to indicate if NMEA should be an output protocol on UART2
<i>CFG-UART2OUTPROT-RTCM3X</i>	0x10760004	L	-	-	Flag to indicate if RTCM3X should be an output protocol on UART2

**Table 65: CFG-UART2OUTPROT configuration items**

### 5.9.34 CFG-USB: Configuration of the USB interface

Settings needed to configure the USB communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-USB-ENABLED</i>	0x10650001	L	-	-	Flag to indicate if the USB interface should be enabled
<i>CFG-USB-SELFPOW</i>	0x10650002	L	-	-	Self-powered device
<i>CFG-USB-VENDOR_ID</i>	0x3065000a	U2	-	-	Vendor ID
<i>CFG-USB-PRODUCT_ID</i>	0x3065000b	U2	-	-	Vendor ID
<i>CFG-USB-POWER</i>	0x3065000c	U2	-	mA	Power consumption
<i>CFG-USB-VENDOR_STR0</i>	0x5065000d	X8	-	-	Vendor string characters 0-7
<i>CFG-USB-VENDOR_STR1</i>	0x5065000e	X8	-	-	Vendor string characters 8-15
<i>CFG-USB-VENDOR_STR2</i>	0x5065000f	X8	-	-	Vendor string characters 16-23
<i>CFG-USB-VENDOR_STR3</i>	0x50650010	X8	-	-	Vendor string characters 24-31
<i>CFG-USB-PRODUCT_STR0</i>	0x50650011	X8	-	-	Product string characters 0-7
<i>CFG-USB-PRODUCT_STR1</i>	0x50650012	X8	-	-	Product string characters 8-15
<i>CFG-USB-PRODUCT_STR2</i>	0x50650013	X8	-	-	Product string characters 16-23
<i>CFG-USB-PRODUCT_STR3</i>	0x50650014	X8	-	-	Product string characters 24-31
<i>CFG-USB-SERIAL_NO_STR0</i>	0x50650015	X8	-	-	Serial number string characters 0-7
<i>CFG-USB-SERIAL_NO_STR1</i>	0x50650016	X8	-	-	Serial number string characters 8-15
<i>CFG-USB-SERIAL_NO_STR2</i>	0x50650017	X8	-	-	Serial number string characters 16-23
<i>CFG-USB-SERIAL_NO_STR3</i>	0x50650018	X8	-	-	Serial number string characters 24-31

**Table 66: CFG-USB configuration items**

### 5.9.35 CFG-USBINPROT: Input protocol configuration of the USB interface

Input protocol enable flags of the USB interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-USBINPROT-UBX</i>	0x10770001	L	-	-	Flag to indicate if UBX should be an input protocol on USB
<i>CFG-USBINPROT-NMEA</i>	0x10770002	L	-	-	Flag to indicate if NMEA should be an input protocol on USB
<i>CFG-USBINPROT-RTCM3X</i>	0x10770004	L	-	-	Flag to indicate if RTCM3X should be an input protocol on USB

**Table 67: CFG-USBINPROT configuration items**

### 5.9.36 CFG-USBOUTPROT: Output protocol configuration of the USB interface

Output protocol enable flags of the USB interface.

Configuration item	Key ID	Type	Scale	Unit	Description
<i>CFG-USBOUTPROT-UBX</i>	0x10780001	L	-	-	Flag to indicate if UBX should be an output protocol on USB
<i>CFG-USBOUTPROT-NMEA</i>	0x10780002	L	-	-	Flag to indicate if NMEA should be an output protocol on USB
<i>CFG-USBOUTPROT-RTCM3X</i>	0x10780004	L	-	-	Flag to indicate if RTCM3X should be an output protocol on USB

**Table 68: CFG-USBOUTPROT configuration items**

## 5.10 Legacy UBX message fields reference

The following table lists the legacy UBX message fields and the corresponding configuration item. Note that the mapping from [UBX-CFG](#) message fields to configuration items is not necessarily 1:1 and that some legacy UBX-CFG messages may not be available for certain products.

UBX message and field	Configuration item(s)
<b>UBX-CFG-ANT</b>	
<a href="#">UBX-CFG-ANT.ocd</a>	<a href="#">CFG-HW-ANT_CFG_OPENDET</a>
<a href="#">UBX-CFG-ANT.pdwnOnSCD</a>	<a href="#">CFG-HW-ANT_CFG_PWRDOWN</a>
<a href="#">UBX-CFG-ANT.pinOCD</a>	<a href="#">CFG-HW-ANT_SUP_OPEN_PIN</a>
<a href="#">UBX-CFG-ANT.pinSCD</a>	<a href="#">CFG-HW-ANT_SUP_SHORT_PIN</a>
<a href="#">UBX-CFG-ANT.pinSwitch</a>	<a href="#">CFG-HW-ANT_SUP_SWITCH_PIN</a>
<a href="#">UBX-CFG-ANT.recovery</a>	<a href="#">CFG-HW-ANT_CFG_RECOVER</a>
<a href="#">UBX-CFG-ANT.scd</a>	<a href="#">CFG-HW-ANT_CFG_SHORTDET</a>
<a href="#">UBX-CFG-ANT.svcs</a>	<a href="#">CFG-HW-ANT_CFG_VOLTCTRL</a>
<b>UBX-CFG-DAT</b>	
<a href="#">UBX-CFG-DAT.dX</a>	<a href="#">CFG-NAVSPG-USRDAT_DX</a>
<a href="#">UBX-CFG-DAT.dY</a>	<a href="#">CFG-NAVSPG-USRDAT_DY</a>
<a href="#">UBX-CFG-DAT.dZ</a>	<a href="#">CFG-NAVSPG-USRDAT_DZ</a>
