

# High precision GNSS explorer kit

# Compact platform for u-blox high precision GNSS solutions

- Prototyping kit for cm-level accuracy positioning applications
- · High precision GNSS, LTE, Wi-Fi, Bluetooth, and antennas
- PointPerfect GNSS augmentation service
- Dual-core MCU for applications
- Software components and demo apps in source code

The XPLR-HPG-2 explorer kit provides a complete platform for evaluation and prototyping of u-blox's high precision GNSS (HPG) solution with the PointPerfect GNSS augmentation service. With its GNSS and communication modules it can access correction data from a satellite broadcast via L-band satellite GNSS receiver (use case 1) or IP connectivity using LTE (use case 2) or Wi-Fi (use case 3).

PointPerfect, the u-blox GNSS augmentation service, provides correction data, delivered via the Thingstream IoT service delivery platform. The XPLR-HPG-2 supports NTRIP so can also be used with other error correction services.

The NINA-W10 wireless MCU module with Bluetooth and Wi-Fi connectivity runs the HPG software and controls the communications between the u-blox wireless modules.

The HPG software runs on top of ubxlib, a set of software modules to connect u-blox modules with concise C APIs.

The hardware design and software source code are available on Github so that customers can modify code as needed, add functionality, and start developing their own product.

# Electrical data and interfaces

Power supply	USB and onboard battery (not included)
Application MC0	Dual-core with 8 MB flash and 520 kB RAM
Data storage	SD card slot for max 32 GB (card not included)
Antennas	Bluetooth and Wi-Fi on NINA-W106, two
	LTE, one GNSS with L-band support

## Integrated positioning and communication on one board

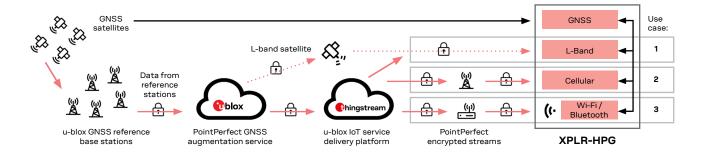

NINA-W106	Dual-core MCU for applications and Wi-Fi 4 / Bluetooth v4.2 connectivity
ZED-F9R	High precision GNSS receiver module with dead reckoning
NEO-D9S	L-band GNSS correction receiver module
LARA-R6001D	LTE Cat 1 multi-mode module to receive PointPerfect correction data via mobile network
PointPerfect Correction service	PointPerfect based on SPARTN messaging format and MQTT delivery protocol.

#### Kit includes

- C214 application board with u-blox modules
- · LTE and GNSS antennas
- Application software example in source code
- Trial PointPerfect and AssistNow location services supporting delivery over IP (LTE & Wi-Fi)
- Type-C USB cable
- GNSS antenna ground plane

# **Product variants**

XPLR-HPG-2	High precision GNSS explorer kit with Wi-Fi, Bluetooth, cellular, and GNSS technologies.
	PointPerfect and AssistNow services.
