Disclaimer

This presentation contains certain forward-looking statements. Such forward-looking statements reflect the current views of management and are subject to known and unknown risks, uncertainties, assumptions and other factors that may cause actual results, performance or achievements of the Group to differ materially from those expressed or implied herein.

Should such risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary materially from those described in this presentation. u-blox is providing the information in this presentation as of this date and does not undertake any obligation to update any forward-looking statements contained in it as a result of new information, future events or otherwise.

Agenda

- Transaction highlights
- Introduction of Cognovo
- Strategic rationale
- Outlook
- Q&A

Acquisition Overview

- Acquisition of 100% of the shares of Cognovo
- Acquisition price USD 16.5m (debt free)
- Fully paid-up in cash
- Closing date June 27, 2012

Introducing Cognovo

- Cognovo was spun off from ARM in 2009
- 30 employees, headquartered in Cambridge, England. Offices in Leuven, Belgium
- Designs and develops leading edge “Software Defined Modem” (SDM) engine and design tools
- Essential technology for wireless baseband chips, especially for 4G

Cognovo: Key technology and expertise

Software Defined Modem (SDM) engine and design tools for implementing advanced baseband chip architectures:

- Highly advanced know-how for complex baseband chip architectures
- Allows software optimization of chip designs before manufacturing
- Separates functionality from hardware platform, resulting in faster time to market
- A single hardware platform for all global wireless standards
- Highly cost-efficient

Strategic Rationale

Overview of Cognovo

- Specialist in Software Defined Modem (SDM) architecture
- Technology proven in a first chip made with Samsung
- Highly experienced team with heritage from TTPCom and ARM

Strategic rationale

- Differentiate and reduce cost with proprietary chip technology
- Create chipsets and stack software for wireless modems
- Combine Cognovo's cellular chip technology with 4G stack from the acquisition of 4M Wireless

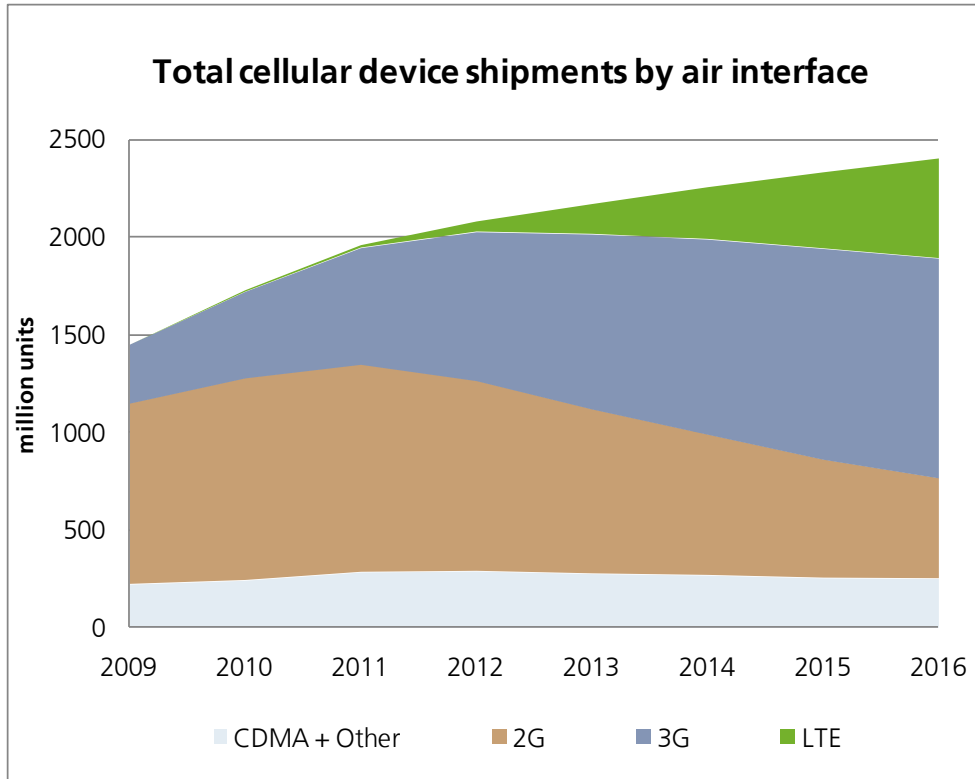

Shareholder value creation

- Accelerate revenue growth in the strongly growing LTE market
- Win market share through differentiated LTE chips and modules
- Improve margins and profits by reducing cost with own chip

Important reasons to migrate to LTE

End user	System integrator	Mobile operator
<ul style="list-style-type: none">• Faster<ul style="list-style-type: none">• Higher speed: up to 326 Mbps• Lower latency: 10 - 20ms (a quarter of 3G)• Lower power per megabyte• Better reliability	<ul style="list-style-type: none">• End-to-end IP system: simplifies machine-to-machine networking• LTE is a truly global standard• LTE is future-proof	<ul style="list-style-type: none">• Lower CAPEX and OPEX• Better use of spectrum: 2-4 times higher than with HSPA• LTE is designed to handle variable bandwidths

LTE gains market share

u-blox estimates

- The rise of smartphones and tablets has led to a rapid increase in consumption of data
- Operators need faster and higher capacity networks to meet demand
- The only real solution to meet these requirements is LTE
- LTE networks are being deployed worldwide at great speed

Market potential M2M - by vertical markets

u-blox estimates

- Automotive and asset tracking continue to be the dominant applications by volume
- Medical fastest growing segment (95% CAGR 2010-2016)
- Automotive, smart building, digital signage and medical are prone for LTE
- Machine-to-Machine (M2M) is an identified high growth area where u-blox is already active with its products & solutions

LTE applications in our core markets

Consumer

- Portable devices
- Dongles
- Mobile WiFi hotspots

Industrial

- Network infrastructure
- Smart buildings
- Digital signage
- Mobile healthcare

Automotive

- Car infotainment
- Emergency call
- Stolen vehicle tracking

Emerging 4G applications in the industrial market

Network infrastructure

- Customer premise equipment (indoor)
- Customer premise equipment (outdoor)
- Wireless routers

Smart buildings

- Smart metering
- Security & Alarm
- Energy management

Digital signage

- Interactive panels
- Remote updates of content
- Remote diagnostics

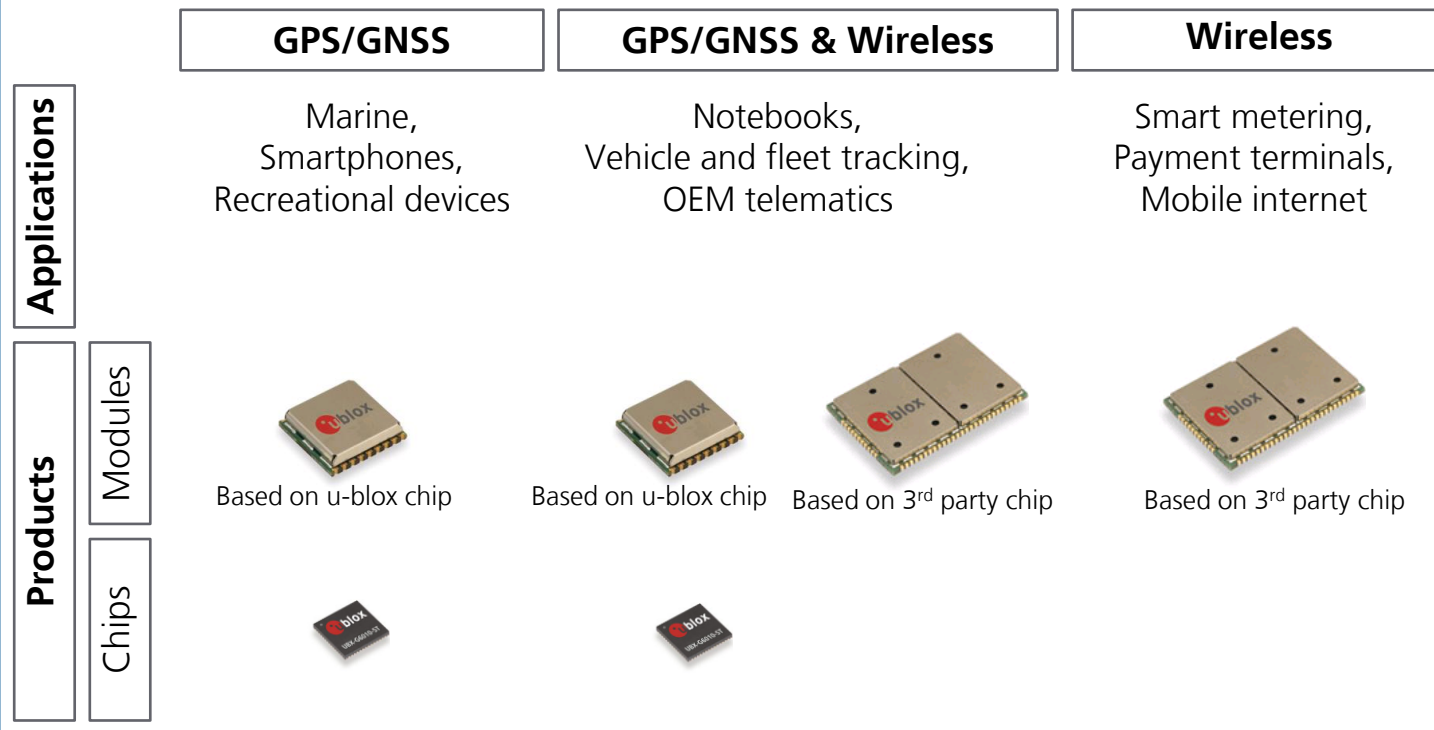

Mobile healthcare

- Remote monitoring
- Patient guidance
- Emergency call

Opportunity: Expanding our position in M2M

Current Strategy

Complete positioning & wireless offering

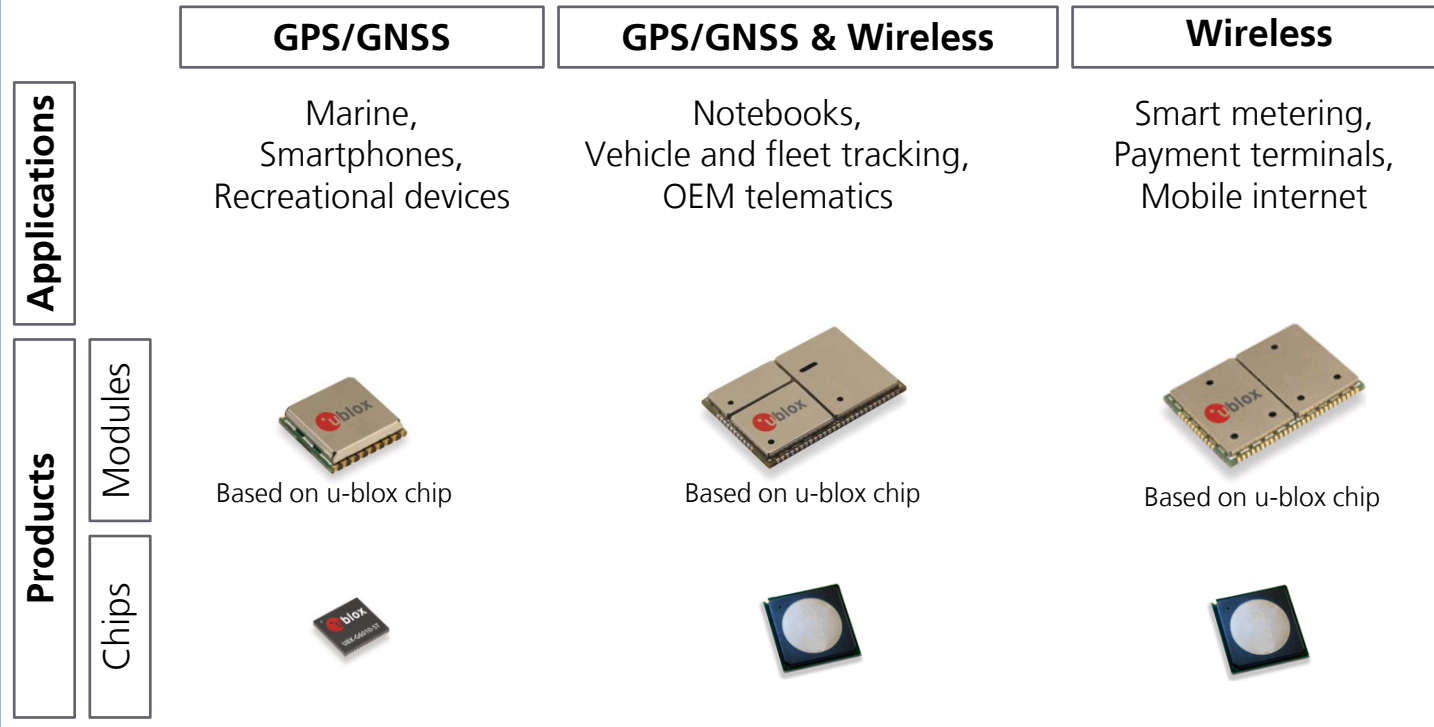

- Positioning markets served with own chip and firmware
- Positioning modules contain u-blox chip
- Wireless products contain own software for adaptation to M2M markets
- Wireless modules employ third party chipsets

Opportunity: Expanding our position in M2M

Strategy 2012 onwards

Complete positioning & wireless offering

- Positioning markets served with own chip and firmware
- Positioning modules contain u-blox chip
- Wireless modules with u-blox chip and software, targeted at M2M markets
- Positioning and wireless technologies converge

Complete product portfolio solves our customers' needs

Our complete offering will simplify industrial application deployment with targeted products

u-blox 4G chip

Customer needs

- Low power
- High quality
- Long life time
- Low cost
- Hybrid positioning

u-blox solution

- Dedicated M2M chip
- Standard and Automotive grade
- Long life time availability
- Cost-effective technology

Synergies between u-blox and Cognovo

Cognovo delivers:

- Wireless baseband know-how
- SDM processor core and tool kit
- SDM firmware
- A first baseband chip

u-blox delivers:

- Wireless modem knowhow
- Full 4G stack (with 4M Wireless), expertise in 2G, 3G stacks
- Chip design and industrialization
- Module design and industrialization
- Strong financial background

Cognovo integration plan

- Integration
 - Cognovo will change name to u-blox
 - R&D facilities will be retained
 - All departments will be integrated into u-blox' existing organization
 - A wireless chip design team will be created and further expanded
 - First products expected by the end of 2013
- Impact on guidance
 - No impact on expected revenues for fiscal year 2012
 - EBIT 2012 reduced by CHF 3.0m including all additional efforts for new chipset
