u-blox F10 SPG 6.00

Standard precision GNSS firmware

Protocol version 40.00

Interface description

Abstract
This document describes the interface of the u-blox F10 SPG 6.00 firmware.

1 General information

1.1 Document overview

This document describes the interface of the Standard precision GNSS firmware. The interface consists of the following parts:

- NMEA protocol
- UBX protocol
- Configuration interface

☞ Some of the features described here may not be available in the receiver, and some may require specific configurations to be enabled. See the applicable data sheet for availability of the features and the integration manual for instructions for enabling them.

☞ Previous versions of u-blox receiver documentation combined general receiver description and interface specification. In the current documentation the receiver description is included in the integration manual.

See also Related documents.

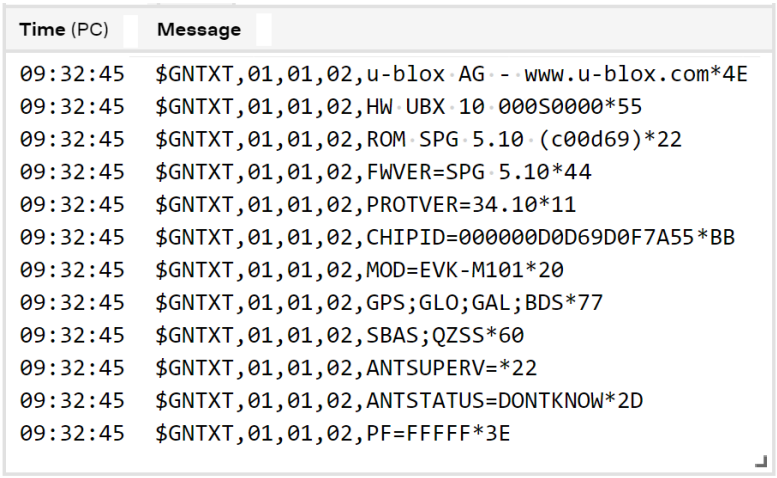
1.2 Firmware and protocol versions

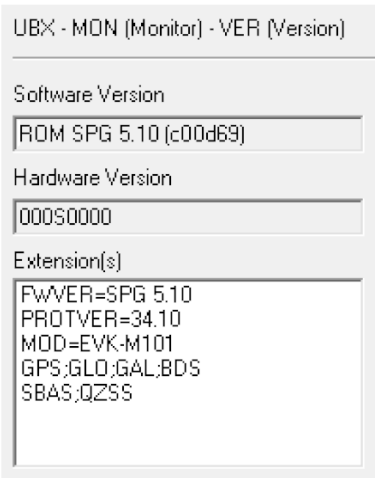
u-blox receivers execute firmware from internal ROM or load an external image and execute it from internal code-RAM.

- If the product does not have internal code-RAM, the firmware runs from the ROM.
- If the product has internal code-RAM but an external image is not available, the firmware runs from the ROM. Some products have only limited ROM and enter boot mode with no GNSS function if an external image is not available.
- If the external firmware image is stored in a flash memory, it is loaded into the code-RAM before execution.
- In some products, the firmware image can be stored in the host system and loaded into the code-RAM from there.

The location and the version of the currently running firmware can be found in the boot screen and in the UBX-MON-VER message. If the firmware has been loaded from the flash memory or from the host processor, it is indicated by text "EXT". Running from the internal ROM is indicated by text "ROM". When the receiver is started, the boot screen is output automatically in UBX-INF-NOTICE or NMEA-Standard-TXT messages if configured using CFG-INFMSG. The UBX-MON-VER message can be polled using the UBX polling mechanism.

The following u-center screenshots show an example of boot information:





The following information is available (✓) from the boot screen (**B**) and the UBX-MON-VER message (**M**):

B	M	Example	Information
✓		`u-blox AG - www.u-blox.com`	Start of the boot screen.
✓		`HW UBX 10 00000000`	Hardware version of the u-blox receiver.
	✓	`00000000`	
✓	✓	`ROM SPG 5.10 (000000)`	Firmware version and revision identifier.
✓	✓	`ROM BASE 0x118B2060`	Revision of the underlying boot loader firmware in ROM.
✓	✓	`FWVER=SPG 5.10`	Product firmware version, where: • `SPG` = Standard precision GNSS product • `HPG` = High precision GNSS product • `ADR` = Automotive dead reckoning product • `TIM` = Time sync product • `LAP` = Lane accurate positioning product • `HPS` = High precision sensor fusion product • `DBS` = Dual band standard precision • `MDR` = Multi-mode dead reckoning product • `PMP` = L-Band Inmarsat point-to-multipoint receiver • `QZS` = QZSS L6 centimeter level augmentation service (CLAS) message receiver • `DBD` = Dual band dead reckoning product • `LDR` = ROM bootloader, no GNSS functionality
✓	✓	`PROTVER=34.00`	Supported protocol version.
✓		`CHIPID=000000D0D69D0F7A54`	Unique chip identification number.
✓	✓	`MOD=EVK-M101`	Module name.
✓	✓	`GPS;GLO;GAL;BDS`	List of supported major GNSS (see GNSS identifiers).
✓	✓	`SBAS;QZSS`	List of supported augmentation systems (see GNSS identifiers).
✓	✓	`NAVIC`	Extended list of supported GNSS (see GNSS identifiers).
✓		`ANTSUPERV=AC SD PDoS SR`	Configuration of the antenna supervisor, where: • `AC` = Active antenna control enabled • `SD` = Short circuit detection enabled • `OD` = Open circuit detection enabled • `PDoS` = Short circuit power down logic enabled • `SR` = Automatic recovery from short state enabled

B	M	Example	Information
✓		PF=FFF79	Product configuration.
✓		BD=E01C	GNSS band configuration.

☞ The "FWVER" product firmware version indicates which firmware is currently running. This is referred to as "firmware version" in this and other documents.

☞ The version and revision numbers should only be used to identify a known firmware version. They are not necessarily numeric nor are they guaranteed to increase with later firmware versions.

☞ All u-blox receivers output the start text, hardware version, and firmware version and revision. Some of the other entries in the boot screen example may be omitted.

The product firmware version and revision relate to the protocol version:

Firmware version	Version and revision identifier	Protocol version
SPG 6.00	EXT SPGL1L5 6.00 (041e8a)	40.00
SPG 6.00	ROM SPGL1L5 6.00 (041e8a)	40.00

1.3 Receiver configuration

u-blox positioning receivers are fully configurable with UBX protocol messages. The configuration used by the receiver during normal operation is called the "current configuration". The current configuration can be changed during normal operation by sending UBX-CFG-VALSET messages over any I/O port. The receiver changes its current configuration immediately after receiving a configuration message. The receiver always uses the current configuration only.

The current configuration is loaded from permanent configuration hard-coded in the receiver firmware (the defaults) and from non-volatile memory (user configuration) on startup of the receiver. Changes made to the current configuration at run-time will be lost when there is a power cycle, a hardware reset or a (complete) controlled software reset (see Configuration reset behavior).

See Configuration interface for a detailed description of the receiver configuration system, the explanation of the configuration concept and its principles and interfaces.

☞ The configuration interface has changed from earlier u-blox positioning receivers. There is some backwards compatibility provided in UBX-CFG configuration messages. Users are strongly advised to only use the Configuration interface. See also Legacy UBX message fields reference.

☞ See the integration manual for a basic receiver configuration most commonly used.

1.4 Message naming

Message names are written in full with the parts of the name separated by hyphens ("-"). The full message name consists of the protocol name (e.g. *UBX)*, the class name (e.g. *NAV*) and the message name (e.g. *PVT*). For example, the receiver software version information message is referred to as *UBX-MON-VER*. Similarly, the *NMEA-Standard-GGA* is the NMEA standard message (sentence) with the global positioning fix data.

References to fields of the message add the field name separated by a dot ("."), e.g. *UBX-MON-VER.swVersion*.

Some messages use a fourth level of naming, called the message version. One example is the *UBX-MGA-GPS* message for GPS assistance data, which exists in versions for ephemerides (*UBX-MGA-GPS-EPH*) and almanacs (*UBX-MGA-GPS-ALM*).

Names of configuration items are of the form *CFG-GROUP-ITEM*. For example, *CFG-NAVSPG-DYNMODEL* refers to the navigation dynamic platform model the receiver uses. Constants add a fourth level to the item name, such as *CFG-NAVSPG-DYNMODEL-AUTOMOT* for the automotive platform model. In the context of describing an item's value, only the last part of the constant name can be used (e.g. "set *CFG-NAVSPG-DYNMODEL* to *PORT* for portable applications").

1.5 GNSS, satellite, and signal identifiers

1.5.1 Overview

Many UBX protocol messages contain infomation about specific satellites. Any single satellite can be identified by a `gnssId` field indicating the GNSS the satellite is part of and an `svId` (SV for space vehicle) field indicating the number of the satellite in that system. Usually, the `svId` is the native number associated with the satellite in the specific GNSS. For example, the Galileo SV4 is identified as gnssId 2, svId 4, while the GPS SV4 is gnssId 0, svId 4.

Some legacy UBX protocol messages combine both the satellite number and the GNSS identification into a one-byte (type U1) field. See the single svid mapping in Satellite identifiers to identify the corresponding GNSS and satellite.

GLONASS satellites can be tracked before they have been identified. In UBX messages, the unknown satellites are reported with svId 255. In NMEA messages, the unknown satellites are null (empty) fields. Product-related documentation and u-center use R? to label unidentified GLONASS satellites.

Signal identifiers are used when different signals from the same GNSS satellite need to be distinguished (e.g. in the UBX-NAV-SIG message). A separate `sigId` field identifies the signal. These signal identifiers are only valid when combined with a GNSS identifier (`gnssId` field).

The NMEA protocol (version 4.10 and later) identifies GNSS satellites with a one-digit system ID and a two-digit satellite number. u-blox receivers support this method in their NMEA output when "strict" SV numbering is selected. In most cases this is the default setting, but it can be checked or changed using the Configuration interface (see also NMEA GNSS, satellite, and signal numbering).

In order to support some GNSS (e.g. BeiDou, Galileo, QZSS), which are not supported by some or all NMEA protocol versions, an "extended" SV numbering scheme can be enabled. This uses the NMEA-defined numbers where possible but adds other number ranges to support other GNSS. Note however that these non-standard extensions require 3-digit numbers, which may not be supported by some NMEA parsing software. For example, QZSS satellites use numbers in the range 193 to 202.

The NMEA standard defines signal identifiers to distinguish different signals sent by a single GNSS satellite (e.g. L2 CL and CM). u-blox positioning receivers use those identifiers for signal identification, as far as the corresponding standard is supported in a particular product.

☞ Note that the following sections are a generic overview for different u-blox positioning receivers. A particular product may not support all of the described GNSS identifiers, satellite numbers, signal identifiers or combinations thereof.

1.5.2 GNSS identifiers

Table 1 lists each GNSS along with the GNSS identifier (UBX protocol), the NMEA system identifiers (NMEA protocol), and abbreviations used in this document:

[1] While not defined by NMEA 4.10, in this mode, u-blox receivers use system ID 4 for BeiDou and, if extended satellite numbering is enabled, system ID 1 for QZSS.

GNSS	Abbreviations		UBX gnssId	NMEA system ID		
				2.3 - 4.0	4.10	4.11
GPS	GPS	G	0	1	1	1
SBAS	SBAS	S	1	1	1	1
Galileo	GAL	E	2	n/a	3	3
BeiDou	BDS	B	3	n/a	(4)[1]	4
QZSS	QZSS	Q	5	n/a	(1)[1]	5
GLONASS	GLO	R	6	2	2	2
NavIC	NavIC	N	7	n/a	n/a	6

Table 1: GNSS identifiers

See also NMEA Talker ID.

1.5.3 Satellite identifiers

The satellite numbering scheme for the UBX protocol is provided in Table 2. The satellite numbering scheme for the NMEA protocol is provided in Table 3.

GNSS	SV Range	gnssId:svId	single svid
GPS	G1-G32	0:1-32	1-32
SBAS	S120-S158	1:120-158	120-158
Galileo	E1-E36	2:1-36	211-246
BeiDou	B1-B5	3:1-5	159-163
	B6-B37	3:6-37	33-64
	B38-B63	3:38-63	n/a
QZSS	Q1-Q10	5:1-10	193-202
GLONASS	R1-R32	6:1-32	65-96
	R?	6:255	255
NavIC	N1-N7	7:1-7	247-253
	N8-N14	7:8-14	n/a

Table 2: UBX protocol satellite numbering scheme

		NMEA 2.3 - 4.0		NMEA 4.10		NMEA 4.11	
GNSS	SV Range	strict	extended	strict	extended	strict	extended
GPS	G1-G32	1-32	1-32	1-32	1-32	1-32	1-32
SBAS	S120-S158	33-64	33-64, 152-158	33-64	33-64, 152-158	33-64	33-64, 152-158
Galileo	E1-E36	n/a	301-336	1-36	1-36	1-36	1-36
BeiDou	B1-B5	n/a	401-405	1-5	1-5	1-5	1-5
	B6-B37	n/a	406-437	6-37	6-37	6-37	6-37
	B38-B63	n/a	438-463	38-63	38-63	38-63	38-63
QZSS	Q1-Q10	n/a	193-202	n/a	193-202	1-10	1-10
GLONASS	R1-R32	65-96	65-96	65-96	65-96	65-96	65-96
	R?	null	null	null	null	null	null

GNSS	SV Range	NMEA 2.3 - 4.0		NMEA 4.10		NMEA 4.11	
		strict	extended	strict	extended	strict	extended
	N8-N14	n/a	n/a	n/a	n/a	8-14	8-14

Table 3: NMEA protocol satellite numbering scheme

1.5.4 Signal identifiers

A summary of all the signal identification schemes used in the NMEA protocol and the UBX protocol is provided in the following table. (Only a subset of the signals is supported by each product.) In the NMEA protocol, system and signal identifiers are in hexadecimal format. An unknown signal identifier is presented as 0 in the NMEA protocol.

Signal	UBX Protocol		NMEA Protocol 4.10		NMEA Protocol 4.11	
	gnssId	sigId	System ID	Signal ID	System ID	Signal ID
GPS L1C/A[2]	0	0	1	1	1	1
GPS L2 CL	0	3	1	6	1	6
GPS L2 CM	0	4	1	5	1	5
GPS L5 I	0	6	1	7	1	7
GPS L5 Q	0	7	1	8	1	8
SBAS L1C/A[2]	1	0	1	1	1	1
Galileo E1 C[2]	2	0	3	7	3	7
Galileo E1 B[2]	2	1	3	7	3	7
Galileo E5 aI	2	3	3	1	3	1
Galileo E5 aQ	2	4	3	1	3	1
Galileo E5 bI	2	5	3	2	3	2
Galileo E5 bQ	2	6	3	2	3	2
BeiDou B1I D1[2]	3	0	(4)[3]	(1)[4]	4	1
BeiDou B1I D2[2]	3	1	(4)[3]	(1)[4]	4	1
BeiDou B2I D1	3	2	(4)[3]	(3)[4]	4	B
BeiDou B2I D2	3	3	(4)[3]	(3)[4]	4	B
BeiDou B1 Cp (pilot)	3	5	(4)[3]	N/A	4	3
BeiDou B1 Cd (data)	3	6	(4)[3]	N/A	4	3
BeiDou B2 ap (pilot)	3	7	(4)[3]	N/A	4	5
BeiDou B2 ad (data)	3	8	(4)[3]	N/A	4	5
QZSS L1C/A[2]	5	0	(1)[3]	(1)[4]	5	1
QZSS L1S	5	1	(1)[3]	(4)[4]	5	4
QZSS L2 CM	5	4	(1)[3]	(5)[4]	5	5
QZSS L2 CL	5	5	(1)[3]	(6)[4]	5	6
QZSS L5 I	5	8	(1)[3]	N/A	5	7
QZSS L5 Q	5	9	(1)[3]	N/A	5	8

[2] UBX messages that do not have an explicit `sigId` field contain information about the subset of signals marked.

[3] While not defined by NMEA 4.10, in this mode, u-blox receivers use system ID 4 for BeiDou and, if extended satellite numbering is enabled, system ID 1 for QZSS.

[4] BeiDou and QZSS signal ID are not defined in the NMEA protocol version 4.10. Values shown in the table are only valid for u-blox products and, for QZSS signal ID, if extended satellite numbering is enabled.

Signal	UBX Protocol		NMEA Protocol 4.10		NMEA Protocol 4.11	
	gnssId	sigId	System ID	Signal ID	System ID	Signal ID
GLONASS L1 OF[2]	6	0	2	1	2	1
GLONASS L2 OF	6	2	2	3	2	3
NavIC L5 A[2]	7	0	N/A	N/A	6	1

Table 4: Signal identifiers

1.6 Message types

The following message types are defined:

Message type	Description
Input	Messages that are input to the receiver and never output. E.g. UBX-MGA-GPS-EPH.
Output	Messages that are output by the receiver in no particular interval and never input. E.g. UBX-ACK-ACK.
Input/output	Messages that can be output by or input to the receiver. E.g. UBX-MGA-DBD-DATA0.
Periodic	Messages that are output in regular intervals but cannot be polled. E.g. UBX-NAV-EOE.
Periodic/polled	Messages that are output in regular intervals and can be polled. E.g. UBX-NAV-PVT.
Command	Messages that are a command to the receiver. Similar to type *Input* these are input-only. E.g. UBX-CFG-RST.
Get	Output-only configuration or command messages. E.g. UBX-CFG-DAT.
Set	Input-only configuration or command messages. E.g. UBX-CFG-VALDEL.
Get/set	Input/output configuration or command messages. E.g. UBX-CFG-NAVX5.
Polled	Non-periodic messages that can only be polled. E.g. UBX-MON-VER.
Poll request	Poll request. E.g. UBX-MGA-DBD-POLL.

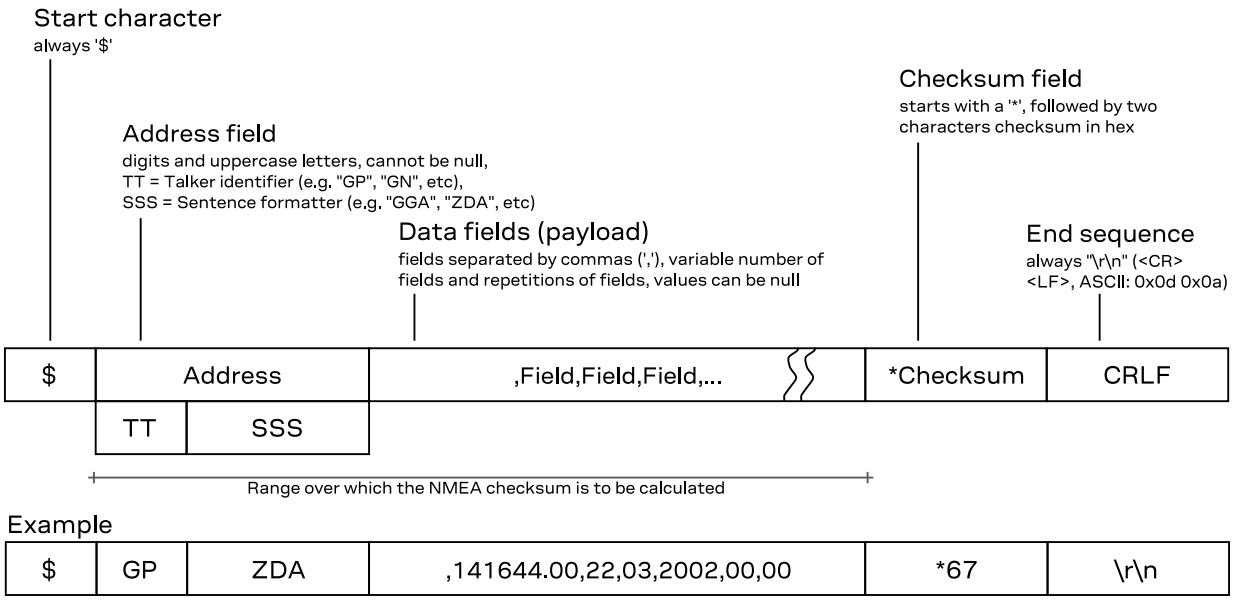
2 NMEA protocol

The following sections give an overview of the NMEA messages used by u-blox positioning receivers.

By default, the NMEA messages sent by u-blox positioning receivers are based on the NMEA 0183 version 4.11 standard. For further information on the NMEA standard, refer to the *NMEA 0183 Standard for Interfacing Marine Electronic Devices*, Version 4.11, November 2018, which is available on http://www.nmea.org/.

2.1 NMEA frame structure

The following figure shows the structure of a NMEA protocol message (called "sentences" in the standard).



2.2 NMEA protocol configuration

The NMEA protocol on u-blox receivers can be configured for customer applications by using the Configuration interface (CFG-NMEA-* items).

Several NMEA standard versions are supported. Version 4.11 (not in all products), 4.10, 4.00, 2.3, or 2.1 can be configured. See Configuration defaults for the default version. See CFG-NMEA-PROTVER to configure the version. See NMEA multi-GNSS operation and NMEA data fields for details on how this affects the output.

The following filtering flags can be used to configure the output of some NMEA message fields:

Filter	Configuration Item	Description
Position filtering	CFG-NMEA-OUT_INVFIX	Enable to permit positions from failed or invalid fixes to be reported (with the "V" status flag to indicate that the data is not valid).
Valid position filtering	CFG-NMEA-OUT_MSKFIX	Enable to permit positions from invalid fixes to be reported (with the "V" status flag to indicate that the data is not valid).
Time filtering	CFG-NMEA-OUT_INVTIME	Enable to permit the receiver's best knowledge of time to be output, even though it might be wrong.

Filter	Configuration Item	Description
Date filtering	CFG-NMEA-OUT_INVDATE	Enable to permit the receiver's best knowledge of date to be output, even though it might be wrong.
GPS-only filtering	CFG-NMEA-OUT_ONLYGPS	Enable to restrict output to only report GPS satellites.
Track filtering	CFG-NMEA-OUT_FROZENCOG	Enable to permit course over ground (COG) to be reported even when it would otherwise be frozen.

The following filtering flags can be used to configure the output of some NMEA message flags:

Mode	Configuration Item	Description
Compatibility mode	CFG-NMEA-COMPAT	Some older NMEA applications expect the NMEA output to be formatted in a specific way, for example, they will only work if the latitude and longitude have exactly four digits behind the decimal point. u-blox receivers offer a compatibility mode to support these legacy applications.
Consideration mode	CFG-NMEA-CONSIDER	u-blox receivers use a sophisticated signal quality detection scheme, in order to produce the best possible position output. This algorithm considers all SV measurements, and may eventually decide to only use a subset thereof, if it improves the overall position accuracy. If consideration mode is enabled, all satellites, which were considered for navigation, are communicated as being used for the position determination. If consideration mode is disabled, only those satellites which after the consideration step remained in the position output are marked as being used.
Limit length mode	CFG-NMEA-LIMIT82	Enabling this mode will limit the NMEA sentence length to a maximum of 82 characters.
High precision mode	CFG-NMEA-HIGHPREC	Enabling this mode increases precision of the position output. Latitude and longitude then have seven digits after the decimal point, and altitude has three digits after the decimal point. Note: The high precision mode cannot be set in conjunction with either compatibility mode or Limit82 mode.

The following extended configuration options are available:

Option	Configuration Item(s)	Description
GNSS to filter	CFG-NMEA-FILT_GPS etc.	Filters satellites based on the GNSS they belong to.
Satellite numbering	CFG-NMEA-SVNUMBERING	This field configures the display of satellites that do not have an NMEA-defined value. Note: this does not apply to satellites with an unknown ID. See also Satellite identifiers.
Main Talker ID	CFG-NMEA-MAINTALKERID	By default the main Talker ID (i.e. the Talker ID used for all messages other than GSV) is determined by the GNSS assignment of the receiver's channels (see configuration items CFG-SIGNAL-*). This field enables the main Talker ID to be overridden. See also NMEA Talker ID.
GSV Talker ID	CFG-NMEA-GSVTALKERID	By default the Talker ID for GSV messages is GNSS-specific (as defined by NMEA). This field enables the GSV Talker ID to be overridden.
BDS Talker ID	CFG-NMEA-BDSTALKERID	By default the Talker ID for BeiDou is "GB". This field enables the BeiDou Talker ID to be overridden.

2.3 NMEA-proprietary messages

The NMEA standard allows for proprietary, manufacturer-specific messages to be added. These shall be marked with a manufacturer mnemonic. The mnemonic assigned to u-blox is UBX and is used for all non-standard messages. These proprietary NMEA messages therefore have the address field set to PUBX. The first data field in a PUBX message identifies the message number with two digits.

2.4 NMEA multi-GNSS operation

Many applications that process NMEA messages assume that only a single GNSS is active. However, when multiple GNSS are configured, the NMEA specification requires the output to change in the following ways:

Main Talker ID The main NMEA Talker ID is "GN" (e.g. instead of "GP" for a GPS-only receiver).

GSV Talker and Signal IDs The GSV message reports the signal strength of the visible satellites. In multi-GNSS operation, other messages use the main Talker ID "GN" but the Talker ID in the GSV message is specific to the GNSS it is reporting information for.

The GSV messages are grouped by the Talker and Signal IDs. Separate sets of GSV messages are sent for each GNSS and signal. The Signal ID of a satellite may be unknown. Such satellites are presented in their own set with Signal ID 0. Grouping the GSV messages by the Signal ID is supported in firmware versions 27.12 and later.

Multiple GSA and GRS messages Multiple GSA and GRS messages are output for each fix, one for each GNSS. This may confuse applications that assume they are output only once per position fix (as is the case for a single GNSS receiver).

GGA Talker IDs The NMEA specification indicates that the GGA message is GPS-specific. However, u-blox receivers support the output of a GGA message for each of the Talker IDs.

BeiDou and Galileo Only NMEA version 4.10 and later have support for these systems.

QZSS Only NMEA version 4.11 and later have support for this system.

Extended satellite numbering In order to support some GNSS (e.g. BeiDou, Galileo, QZSS) that are not supported by some or all NMEA protocol versions, an "extended" SV numbering scheme can be enabled. This uses the NMEA-defined numbers where possible, but adds other number ranges to support other GNSS. Note however that these non-standard extensions require 3-digit numbers, which may not be supported by some NMEA parsing software. For example, QZSS satellites use numbers in the range 193 to 202. See NMEA protocol configuration and Satellite identifiers.

2.5 NMEA data fields

Various data fields in NMEA messages depend on NMEA protocol configuration or require a definition for their interpretation.

2.5.1 NMEA Talker ID

One of the ways the NMEA standard differs depending on the GNSS is by using a two-letter message identifier, the "Talker ID". The specific Talker ID used by a u-blox receiver will depend on the product and its configuration. The table below shows the Talker ID that will be used for various GNSS configurations by default.

GNSS	Talker ID	Comments
GPS, SBAS	GP	NMEA 2.3+
GLONASS	GL	NMEA 2.3+
Galileo	GA	NMEA 4.10+
BeiDou	GB	NMEA 4.10+ (official NMEA only since 4.11)
NavIC	GI	NMEA 4.11+
QZSS	GQ	NMEA 4.11+ (GP for NMEA 2.3 - 4.10)

GNSS	Talker ID	Comments
Any combination of GNSS	GN	

2.5.2 NMEA extra fields

The following extra fields are available in NMEA 4.10 and later.

Message	Extra fields
NMEA-Standard-GBS	`systemId` and `signalId`
NMEA-Standard-GNS	`navStatus`
NMEA-Standard-GRS	`systemId` and `signalId`
NMEA-Standard-GSA	`systemId`
NMEA-Standard-GSV	`signalId`
NMEA-Standard-RMC	`navStatus`

2.5.3 NMEA latitude and longitude format

According to the NMEA standard, latitude and longitude are output in the format *degrees, minutes and (decimal) fractions of minutes*. To convert to *degrees and fractions of degrees*, or *degrees, minutes, seconds and fractions of seconds*, the *minutes* and *fractional minutes* parts need to be converted. For example:

Format	Latitude	Longitude
Receiver output	`$GNRMC,014230.00,A,4722.80340,N,00831.68218,E,0.000,,120477,,,A,V*14`	
(d)ddmm.mmmmm	4722.80340 North	00831.68218 East
Degrees and minutes	47 degrees, 22.80340 minutes	8 degrees, 31.68218 minutes
Degrees	47.38005667 degrees	8.52803633 degrees
Degrees, minutes and seconds	47 degrees, 22 minutes, 48.2040 seconds	8 degrees, 31 minutes, 40.9308 seconds

2.5.4 NMEA GNSS, satellite, and signal numbering

See GNSS, satellite, and signal identifiers for details on how GNSS, satellites and signals are numbered in the NMEA protocol.

NMEA defines satellite numbering systems for some, but not all GNSS. The exact behavior depends on the configured NMEA protocol version and ("extended" or "strict") mode. See NMEA protocol configuration for details.

2.5.5 NMEA position fix flags

This section shows how u-blox positioning receivers implement the NMEA protocol and the conditions determining how flags are set.

The following flags are used in NMEA 4.10 and later.

NMEA Message	GLL, RMC	GGA	GLL, VTG	RMC, GNS
Field	**status**[5]	**quality**[6]	**posMode**[7]	**posMode**[7]
No position fix (at power-up, after losing satellite lock)	V	0	N	N

5 Possible *status* values: V = data invalid, A = data valid

6 Possible values for *quality*: 0 = No fix, 1 = autonomous GNSS fix, 2 = differential GNSS fix, 4 = RTK fixed, 5 = RTK float, 6 = estimated/dead reckoning fix

7 Possible values for *posMode*: N = No fix, E = estimated/dead reckoning fix, A = autonomous GNSS fix, D = differential GNSS fix, F = RTK float, R = RTK fixed. In NMEA GNS, u-blox uses a non-standard implementation where same single status is reported for all enabled and not filtered out constellations.

NMEA Message	GLL, RMC	GGA	GLL, VTG	RMC, GNS
Field	**status**[5]	**quality**[6]	**posMode**[7]	**posMode**[7]
GNSS fix, but user limits exceeded	V	0	N	N
Dead reckoning fix, but user limits exceeded	V	6	E	E
Dead reckoning fix	A	6	E	E
RTK float	A	5	D	F
RTK fixed	A	4	D	R
2D GNSS fix	A	1 / 2	A / D	A / D
3D GNSS fix	A	1 / 2	A / D	A / D
Combined GNSS/dead reckoning fix	A	1 / 2	A / D	A / D

In high precision GNSS (HPG) products it is recommended to select NMEA version 4.10 or above. Earlier versions do not support the float RTK (F) and real time kinematic (R) mode indicator flags in all messages.

The following flags are used in NMEA 2.3 - 4.0.

NMEA Message	GLL, RMC	GGA	GSA	GLL, VTG, RMC, GNS
Field	**status**[8]	**quality**[9]	**navMode**[10]	**posMode**[11]
No position fix (at power-up, after losing satellite lock)	V	0	1	N
GNSS fix, but user limits exceeded	V	0	1	N
Dead reckoning fix, but user limits exceeded	V	6	2	E
Dead reckoning fix	A	6	2	E
2D GNSS fix	A	1 / 2	2	A / D
3D GNSS fix	A	1 / 2	3	A / D
Combined GNSS/dead reckoning fix	A	1 / 2	3	A / D

The flags in NMEA 2.1 and earlier are the same as NMEA 2.3 but with the following differences:

- The *posMode* field is not output for GLL, RMC and VTG messages (each message has one field less).
- The GGA *quality* field is set to 1 (instead of 6) for both types of dead reckoning fix.

2.5.6 NMEA output of invalid or unknown data

By default the receiver will not output invalid data. In such cases, it will output empty fields. See NMEA protocol configuration for options to adjust this behavior.

A valid position fix is reported as follows:

```
$GPGLL,4717.11634,N,00833.91297,E,124923.00,A,A*6E
```

An invalid position fix (but valid time) is reported as follows:

```
$GPGLL,,,,,124924.00,V,N*42
```

8 Possible values for *status*: V = data invalid, A = data valid

9 Possible values for *quality*: 0 = no fix, 1 = autonomous GNSS fix, 2 = differential GNSS fix, 4 = RTK fixed, 5 = RTK float, 6 = estimated/dead reckoning fix

10 Possible values for *navMode*: 1 = No fix, 2 = 2D fix, 3 = 3D fix

11 Possible values for *posMode*: N = No fix, E = estimated/dead reckoning fix, A = autonomous GNSS fix, D = differential GNSS fix. In NMEA GNS, u-blox uses a non-standard implementation where same single status is reported for all enabled and not filtered out constellations.

If the time is unknown (e.g. during a cold start):

```
$GPGLL,,,,,,V,N*64
```

☞ Unlike the NMEA standard behavior to invalid data, dead reckoning products always report a position. It is marked as invalid (V) when the user limits are exceeded or valid (A) if the user limits are met.

2.6 NMEA messages overview

Message	*Class/ID*	*Description (Type)*
NMEA-Standard – Standard NMEA messages		
NMEA-Standard-DTM	0xf0 0x0a	• Datum reference (Output)
NMEA-Standard-GAQ	0xf0 0x45	• Poll a standard message (Talker ID GA) (Poll request)
NMEA-Standard-GBQ	0xf0 0x44	• Poll a standard message (Talker ID GB) (Poll request)
NMEA-Standard-GBS	0xf0 0x09	• GNSS satellite fault detection (Output)
NMEA-Standard-GGA	0xf0 0x00	• Global positioning system fix data (Output)
NMEA-Standard-GLL	0xf0 0x01	• Latitude and longitude, with time of position fix and status (Output)
NMEA-Standard-GLQ	0xf0 0x43	• Poll a standard message (Talker ID GL) (Poll request)
NMEA-Standard-GNQ	0xf0 0x42	• Poll a standard message (Talker ID GN) (Poll request)
NMEA-Standard-GNS	0xf0 0x0d	• GNSS fix data (Output)
NMEA-Standard-GPQ	0xf0 0x40	• Poll a standard message (Talker ID GP) (Poll request)
NMEA-Standard-GQQ	0xf0 0x47	• Poll a standard message (Talker ID GQ) (Poll request)
NMEA-Standard-GRS	0xf0 0x06	• GNSS range residuals (Output)
NMEA-Standard-GSA	0xf0 0x02	• GNSS DOP and active satellites (Output)
NMEA-Standard-GST	0xf0 0x07	• GNSS pseudorange error statistics (Output)
NMEA-Standard-GSV	0xf0 0x03	• GNSS satellites in view (Output)
NMEA-Standard-RLM	0xf0 0x0b	• Return link message (RLM) (Output)
NMEA-Standard-RMC	0xf0 0x04	• Recommended minimum data (Output)
NMEA-Standard-TXT	0xf0 0x41	• Text transmission (Output)
NMEA-Standard-VLW	0xf0 0x0f	• Dual ground/water distance (Output)
NMEA-Standard-VTG	0xf0 0x05	• Course over ground and ground speed (Output)
NMEA-Standard-ZDA	0xf0 0x08	• Time and date (Output)
NMEA-PUBX – u-blox proprietary NMEA messages		
NMEA-PUBX-CONFIG	0xf1 0x41	• Set protocols and baud rate (Set)
NMEA-PUBX-POSITION	0xf1 0x00	• Poll a PUBX,00 message (Poll request) • Lat/Long position data (Output)
NMEA-PUBX-RATE	0xf1 0x40	• Set NMEA message output rate (Set)
NMEA-PUBX-SVSTATUS	0xf1 0x03	• Poll a PUBX,03 message (Poll request) • Satellite status (Output)
NMEA-PUBX-TIME	0xf1 0x04	• Poll a PUBX,04 message (Poll request) • Time of day and clock information (Output)

2.7 Standard messages

Standard NMEA messages as defined by the NMEA 0183 standard. See NMEA protocol for details.

2.7.1 DTM

2.7.1.1 Datum reference

Message	**NMEA-Standard-DTM** **Datum reference**
Type	Output
Comment	This message gives the difference between the current datum and the reference datum. The current datum is set to WGS84 by default. The reference datum cannot be changed and is always set to WGS84.
Information	*Class/ID:* 0xf0 0x0a *Number of fields:* 11
Structure	`$xxDTM,datum,subDatum,lat,NS,lon,EW,alt,refDatum*cs\r\n`
Examples	`$GPDTM,W84,,0.0,N,0.0,E,0.0,W84*6F\r\n` `$GPDTM,999,,0.08,N,0.07,E,-47.7,W84*1C\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxDTM`	string	-	$GPDTM	DTM Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	`datum`	string	-	W84	Local datum code: W84 = WGS84, P90 = PZ90, 999 = user-defined
2	`subDatum`	string	-	-	A null field (or a string describing the currently selected datum for protocol versions less than 14.00)
3	`lat`	numeric	min	0.08	Offset in Latitude
4	`NS`	character	-	S	North/South indicator
5	`lon`	numeric	min	0.07	Offset in Longitude
6	`EW`	character	-	E	East/West indicator
7	`alt`	numeric	m	-2.8	Offset in altitude
8	`refDatum`	string	-	W84	Reference datum code: W84 (WGS 84, fixed field)
9	`cs`	hexadecimal	-	*67	Checksum
10	`CRLF`	character	-	-	Carriage return and line feed

2.7.2 GAQ

2.7.2.1 Poll a standard message (Talker ID GA)

Message	**NMEA-Standard-GAQ** **Poll a standard message (Talker ID GA)**
Type	Poll request
Comment	Polls a standard NMEA message if the current Talker ID is GA.
Information	*Class/ID:* 0xf0 0x45 *Number of fields:* 4
Structure	`$xxGAQ,msgId*cs\r\n`
Example	`$EIGAQ,RMC*2B\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxGAQ`	string	-	$EIGAQ	GAQ Message ID (xx = Talker ID of the device requesting the poll)
1	`msgId`	string	-	RMC	Message ID of the message to be polled
2	`cs`	hexadecimal	-	*2B	Checksum

3	CRLF	character	-	-	Carriage return and line feed

2.7.3 GBQ

2.7.3.1 Poll a standard message (Talker ID GB)

Message	**NMEA-Standard-GBQ** **Poll a standard message (Talker ID GB)**				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GB				
Information	*Class/ID:* 0xf0 0x44 *Number of fields:* 4				
Structure	`$xxGBQ,msgId*cs\r\n`				
Example	`$EIGBQ,RMC*28\r\n`				
Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGBQ	string	-	$EIGBQ	GBQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*28	Checksum
3	CRLF	character	-	-	Carriage return and line feed

2.7.4 GBS

2.7.4.1 GNSS satellite fault detection

Message	**NMEA-Standard-GBS** **GNSS satellite fault detection**				
Type	Output				
Comment	This message outputs the results of the Receiver Autonomous Integrity Monitoring Algorithm (RAIM). • The fields **errLat**, **errLon** and **errAlt** output the standard deviation of the position calculation, using all satellites that pass the RAIM test successfully. • The fields **errLat**, **errLon** and **errAlt** are only output if the RAIM process passed successfully (i.e. no or successful edits happened). These fields are never output if 4 or fewer satellites are used for the navigation calculation (because, in such cases, integrity cannot be determined by the receiver autonomously). • The fields **prob**, **bias** and **stdev** are only output if at least one satellite failed in the RAIM test. If more than one satellites fail the RAIM test, only the information for the worst satellite is output in this message.				
Information	*Class/ID:* 0xf0 0x09 *Number of fields:* 13				
Structure	`$xxGBS,time,errLat,errLon,errAlt,svid,prob,bias,stddev,systemId,signalId*cs\r\n`				
Examples	`$GPGBS,235503.00,1.6,1.4,3.2,,,,,,*40\r\n` `$GPGBS,235458.00,1.4,1.3,3.1,03,,-21.4,3.8,1,0*5B\r\n`				
Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGBS	string	-	$GPGBS	GBS Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	time	hhmmss.ss	-	235503.00	UTC time to which this RAIM sentence belongs. See section UTC representation in the integration manual for details.
2	errLat	numeric	m	1.6	Expected error in latitude
3	errLon	numeric	m	1.4	Expected error in longitude

4	errAlt	numeric	m	3.2	Expected error in altitude
5	svid	numeric	-	03	Satellite ID of most likely failed satellite
6	prob	numeric	-	-	Probability of missed detection: null (not supported, fixed field)
7	bias	numeric	m	-21.4	Estimated bias of most likely failed satellite (a priori residual)
8	stddev	numeric	m	3.8	Standard deviation of estimated bias
9	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see Signal Identifiers table (only available in NMEA 4.10 and later)
10	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see Signal Identifiers table (only available in NMEA 4.10 and later)
11	cs	hexadecimal	-	*5B	Checksum
12	CRLF	character	-	-	Carriage return and line feed

2.7.5 GGA

2.7.5.1 Global positioning system fix data

Message	**NMEA-Standard-GGA** **Global positioning system fix data**
Type	Output
Comment	Time and position, together with GPS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.). ☞ The output of this message is dependent on the currently selected datum (default: WGS84). The NMEA specification indicates that the GGA message is GPS-specific. However, when the receiver is configured for multi-GNSS, the GGA message contents will be generated from the multi-GNSS solution. For multi-GNSS use, it is recommended that the NMEA-GNS message is used instead.
Information	*Class/ID:* 0xf0 0x00 *Number of fields:* 17
Structure	`$xxGGA,time,lat,NS,lon,EW,quality,numSV,HDOP,alt,altUnit,sep,sepUnit,diffAge,diffSta ↲ tion*cs\r\n`
Example	`$GPGGA,092725.00,4717.11399,N,00833.91590,E,1,08,1.01,499.6,M,48.0,M,,*5B\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGGA	string	-	$GPGGA	GGA Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	time	hhmmss.ss	-	092725.00	UTC time. See section UTC representation in the integration manual for details.
2	lat	ddmm.mmmmm	-	4717.11399	Latitude (degrees and minutes), see format description
3	NS	character	-	N	North/South indicator
4	lon	dddmm.mmmmm	-	00833.91590	Longitude (degrees and minutes), see format description
5	EW	character	-	E	East/West indicator
6	quality	digit	-	1	Quality indicator for position fix, see position fix flags description
7	numSV	numeric	-	08	Number of satellites used (range: 0-12)
8	HDOP	numeric	-	1.01	Horizontal Dilution of Precision
9	alt	numeric	m	499.6	Altitude above mean sea level
10	altUnit	character	-	M	Altitude units: M (meters, fixed field)

11	sep	numeric	m	48.0	Geoid separation: difference between ellipsoid and mean sea level
12	sepUnit	character	-	M	Geoid separation units: M (meters, fixed field)
13	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
14	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
15	cs	hexadecimal	-	*5B	Checksum
16	CRLF	character	-	-	Carriage return and line feed

2.7.6 GLL

2.7.6.1 Latitude and longitude, with time of position fix and status

Message	**NMEA-Standard-GLL** **Latitude and longitude, with time of position fix and status**
Type	Output
Comment	☞ The output of this message is dependent on the currently selected datum (default: WGS84)
Information	*Class/ID:* 0xf0 0x01 *Number of fields:* 10
Structure	`$xxGLL,lat,NS,lon,EW,time,status,posMode*cs\r\n`
Example	`$GPGLL,4717.11364,N,00833.91565,E,092321.00,A,A*60\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGLL	string	-	$GPGLL	GLL Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	lat	ddmm.mmmmm	-	4717.11364	Latitude (degrees and minutes), see format description
2	NS	character	-	N	North/South indicator
3	lon	dddmm.mmmmm	-	00833.91565	Longitude (degrees and minutes), see format description
4	EW	character	-	E	East/West indicator
5	time	hhmmss.ss	-	092321.00	UTC time. See section UTC representation in the integration manual for details.
6	status	character	-	A	Data validity status, see position fix flags description
7	posMode	character	-	A	Positioning mode, see position fix flags description (only available in NMEA 2.3 and later)
8	cs	hexadecimal	-	*60	Checksum
9	CRLF	character	-	-	Carriage return and line feed

2.7.7 GLQ

2.7.7.1 Poll a standard message (Talker ID GL)

Message	**NMEA-Standard-GLQ** **Poll a standard message (Talker ID GL)**
Type	Poll request
Comment	Polls a standard NMEA message if the current Talker ID is GL
Information	*Class/ID:* 0xf0 0x43 *Number of fields:* 4
Structure	`$xxGLQ,msgId*cs\r\n`

Example	`$EIGLQ,RMC*3A\r\n`				
Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxGLQ`	string	-	$EIGLQ	GLQ Message ID (xx = Talker ID of the device requesting the poll)
1	`msgId`	string	-	RMC	Message ID of the message to be polled
2	`cs`	hexadecimal	-	*3A	Checksum
3	`CRLF`	character	-	-	Carriage return and line feed

2.7.8 GNQ

2.7.8.1 Poll a standard message (Talker ID GN)

Message	**NMEA-Standard-GNQ** **Poll a standard message (Talker ID GN)**				
Type	Poll request				
Comment	Polls a standard NMEA message if the current Talker ID is GN				
Information	*Class/ID:* 0xf0 0x42 *Number of fields:* 4				
Structure	`$xxGNQ,msgId*cs\r\n`				
Example	`$EIGNQ,RMC*3A\r\n`				
Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxGNQ`	string	-	$EIGNQ	GNQ Message ID (xx = Talker ID of the device requesting the poll)
1	`msgId`	string	-	RMC	Message ID of the message to be polled
2	`cs`	hexadecimal	-	*3A	Checksum
3	`CRLF`	character	-	-	Carriage return and line feed

2.7.9 GNS

2.7.9.1 GNSS fix data

Message	**NMEA-Standard-GNS** **GNSS fix data**				
Type	Output				
Comment	Time and position, together with GNSS fixing-related data (number of satellites in use, and the resulting HDOP, age of differential data if in use, etc.). ☞ The output of this message is dependent on the currently selected datum (default: WGS84)				
Information	*Class/ID:* 0xf0 0x0d *Number of fields:* 16				
Structure	`$xxGNS,time,lat,NS,lon,EW,posMode,numSV,HDOP,alt,sep,diffAge,diffStation,navStatus*cs\r\n`				

Examples	`$GNGNS,103600.01,5114.51176,N,00012.29380,W,ANNN,07,1.18,111.5,45.6,,,V*00\r\n`
	`$GNGNS,122310.2,3722.425671,N,12258.856215,W,DAAA,14,0.9,1005.543,6.5,,,V*0E\r\n`
	`$GPGNS,122310.2,,,,,,07,,,,5.2,23,V*02\r\n`				

Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxGNS`	string	-	$GPGNS	GNS Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	`time`	hhmmss.ss	-	091547.00	UTC time. See section UTC representation in the integration manual for details.

2	lat	ddmm.mmmmm	-	5114.50897	Latitude (degrees and minutes), see format description
3	NS	character	-	N	North/South indicator
4	lon	dddmm.mmmmm	-	00012.28663	Longitude (degrees and minutes), see format description
5	EW	character	-	E	East/West indicator
6	posMode	character	-	AAAA	Positioning mode, see position fix flags description. The first four characters indicate the status for GPS, GLONASS, Galileo and BeiDou. Note that the NMEA GNS message only reports a single status. It indicates the status for all enabled constellations that have not been filtered out. To obtain a more detailed status report, refer to the status provided in the UBX messages.
7	numSV	numeric	-	10	Number of satellites used (range: 0-99)
8	HDOP	numeric	-	0.83	Horizontal Dilution of Precision
9	alt	numeric	m	111.1	Altitude above mean sea level
10	sep	numeric	m	45.6	Geoid separation: difference between ellipsoid and mean sea level
11	diffAge	numeric	s	-	Age of differential corrections (null when DGPS is not used)
12	diffStation	numeric	-	-	ID of station providing differential corrections (null when DGPS is not used)
13	navStatus	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
14	cs	hexadecimal	-	*71	Checksum
15	CRLF	character	-	-	Carriage return and line feed

2.7.10 GPQ

2.7.10.1 Poll a standard message (Talker ID GP)

Message	**NMEA-Standard-GPQ** **Poll a standard message (Talker ID GP)**
Type	Poll request
Comment	Polls a standard NMEA message if the current Talker ID is GP
Information	*Class/ID:* 0xf0 0x40 *Number of fields:* 4
Structure	`$xxGPQ,msgId*cs\r\n`
Example	`$EIGPQ,RMC*3A\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGPQ	string	-	$EIGPQ	GPQ Message ID (xx = Talker ID of the device requesting the poll)
1	msgId	string	-	RMC	Message ID of the message to be polled
2	cs	hexadecimal	-	*3A	Checksum
3	CRLF	character	-	-	Carriage return and line feed

2.7.11 GQQ

2.7.11.1 Poll a standard message (Talker ID GQ)

Message	**NMEA-Standard-GQQ** **Poll a standard message (Talker ID GQ)**
Type	Poll request
Comment	Polls a standard NMEA message if the current Talker ID is GQ
Information	*Class/ID:* 0xf0 0x47 *Number of fields:* 4
Structure	`$xxGQQ,msgId*cs\r\n`
Example	`$EIGQQ,RMC*3A\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxGQQ`	string	-	$EIGQQ	GQQ Message ID (xx = Talker ID of the device requesting the poll)
1	`msgId`	string	-	RMC	Message ID of the message to be polled
2	`cs`	hexadecimal	-	*3A	Checksum
3	`CRLF`	character	-	-	Carriage return and line feed

2.7.12 GRS

2.7.12.1 GNSS range residuals

Message	**NMEA-Standard-GRS** **GNSS range residuals**
Type	Output
Comment	If less than 12 SVs are available, the remaining fields are output empty. If more than 12 SVs are used, only the residuals of the first 12 SVs are output, in order to remain consistent with the NMEA standard. **In a multi-GNSS system this message will be output multiple times, once for each GNSS.** ☞ This message relates to associated GGA and GSA messages.
Information	*Class/ID:* 0xf0 0x06 *Number of fields:* 19
Structure	`$xxGRS,time,mode{,residual},systemId,signalId*cs\r\n`
Examples	`$GNGRS,104148.00,1,2.6,2.2,-1.6,-1.1,-1.7,-1.5,5.8,1.7,,,,,1,1*52\r\n` `$GNGRS,104148.00,1,,0.0,2.5,0.0,,2.8,,,,,,,1,5*52\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxGRS`	string	-	$GPGRS	GRS Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	`time`	hhmmss.ss	-	082632.00	UTC time of associated position fix. See section UTC representation in the integration manual for details.
2	`mode`	digit	-	1	Computation method used: • 1 = Residuals were recomputed after the GGA position was computed (fixed)
Start of repeated group (12 times)					
3 + n	`residual`	numeric	m	0.54	Range residuals for SVs used in navigation. The SV order matches the order from the GSA sentence
End of repeated group (12 times)					
15	`systemId`	hexadecimal	-	1	NMEA-defined GNSS system ID, see Signal Identifiers table (only available in NMEA 4.10 and later)
16	`signalId`	hexadecimal	-	-	NMEA-defined GNSS signal ID, see Signal Identifiers table (only available in NMEA 4.10 and later)
17	`cs`	hexadecimal	-	*70	Checksum

18	CRLF	character	-	-	Carriage return and line feed

2.7.13 GSA

2.7.13.1 GNSS DOP and active satellites

Message	**NMEA-Standard-GSA** **GNSS DOP and active satellites**
Type	Output
Comment	The GNSS receiver operating mode, satellites used for navigation, and DOP values. • If less than 12 SVs are used for navigation, the remaining fields are left empty. If more than 12 SVs are used for navigation, only the IDs of the first 12 are output. • The SV numbers (fields 'svid') are in the range of 1 to 32 for GPS satellites, and 33 to 64 for SBAS satellites (33 = SBAS PRN 120, 34 = SBAS PRN 121, and so on) **In a multi-GNSS system this message will be output multiple times, once for each GNSS.**
Information	*Class/ID:* 0xf0 0x02 *Number of fields:* 21
Structure	`$xxGSA,opMode,navMode{,svid},PDOP,HDOP,VDOP,systemId*cs\r\n`
Example	`$GPGSA,A,3,23,29,07,08,09,18,26,28,,,,,1.94,1.18,1.54,1*0D\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGSA	string	-	$GPGSA	GSA Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	opMode	character	-	A	Operation mode: • M = Manually set to operate in 2D or 3D mode • A = Automatically switching between 2D or 3D mode
2	navMode	digit	-	3	Navigation mode, see position fix flags description
Start of repeated group (12 times)					
3 + n	svid	numeric	-	29	Satellite number
End of repeated group (12 times)					
15	PDOP	numeric	-	1.94	Position dilution of precision
16	HDOP	numeric	-	1.18	Horizontal dilution of precision
17	VDOP	numeric	-	1.54	Vertical dilution of precision
18	systemId	hexadecimal	-	1	NMEA-defined GNSS system ID, see Signal Identifiers table (only available in NMEA 4.10 and later)
19	cs	hexadecimal	-	*0D	Checksum
20	CRLF	character	-	-	Carriage return and line feed

2.7.14 GST

2.7.14.1 GNSS pseudorange error statistics

Message	**NMEA-Standard-GST** **GNSS pseudorange error statistics**
Type	Output
Comment	This message reports statistical information on the quality of the position solution.
Information	*Class/ID:* 0xf0 0x07 *Number of fields:* 11
Structure	`$xxGST,time,rangeRms,stdMajor,stdMinor,orient,stdLat,stdLong,stdAlt*cs\r\n`
Example	`$GPGST,082356.00,1.8,,,,1.7,1.3,2.2*7E\r\n`

Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGST	string	-	$GPGST	GST Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	time	hhmmss.ss	-	082356.00	UTC time of associated position fix. See section UTC representation in the integration manual for details.
2	rangeRms	numeric	m	1.8	RMS value of the standard deviation of the ranges
3	stdMajor	numeric	m	-	Standard deviation of semi-major axis
4	stdMinor	numeric	m	-	Standard deviation of semi-minor axis
5	orient	numeric	deg	-	Orientation of semi-major axis
6	stdLat	numeric	m	1.7	Standard deviation of latitude error
7	stdLong	numeric	m	1.3	Standard deviation of longitude error
8	stdAlt	numeric	m	2.2	Standard deviation of altitude error
9	cs	hexadecimal	-	*7E	Checksum
10	CRLF	character	-	-	Carriage return and line feed

2.7.15 GSV

2.7.15.1 GNSS satellites in view

Message	**NMEA-Standard-GSV** **GNSS satellites in view**
Type	Output
Comment	The number of satellites in view, together with each SV ID, elevation azimuth, and signal strength (C/No) value. Only four satellite details are transmitted in one message. In a multi-GNSS system, sets of GSV messages will be output multiple times, one set for each GNSS. The messages are grouped by the signal ID and separate messages are output for each signal ID. (supported for protocol versions 27.12 and later) If a satellite is visible but not tracked, the signal ID is unknown and is presented as 0.
Information	*Class/ID:* 0xf0 0x03 *Number of fields:* 7 + [1..4]·4
Structure	`$xxGSV,numMsg,msgNum,numSV{,svid,elv,az,cno},signalId*cs\r\n`

Examples	`$GPGSV,3,1,09,09,,,17,10,,,40,12,,,49,13,,,35,1*6F\r\n`
	`$GPGSV,3,2,09,15,,,44,17,,,45,19,,,44,24,,,50,1*64\r\n`
	`$GPGSV,3,3,09,25,,,40,1*6E\r\n`
	`$GPGSV,1,1,03,12,,,42,24,,,47,32,,,37,5*66\r\n`
	`$GPGSV,1,1,01,03,05,218,,0*59\r\n`
	`$GAGSV,1,1,00,2*76\r\n`

Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxGSV	string	-	$GPGSV	GSV Message ID (xx = GSV Talker ID, see NMEA Talker IDs table). Talker ID GN shall not be used.
1	numMsg	digit	-	3	Number of messages, total number of GSV messages being output (range: 1-9)
2	msgNum	digit	-	1	Number of this message (range: 1-numMsg)
3	numSV	numeric	-	10	Number of known satellites in view regarding both the talker ID and the signalId
Start of repeated group (1...4 times)					
4 + n·4	svid	numeric	-	23	Satellite ID
5 + n·4	elv	numeric	deg	38	Elevation (<= 90)

6 + n·4	az	numeric	deg	230	Azimuth (range: 0-359)
7 + n·4	cno	numeric	dBHz	44	Signal strength (C/N0, range: 0-99), null when not tracking
End of repeated group (1...4 times)					
4 + N·4	signalId	hexadecimal	-	-	NMEA-defined GNSS signal ID, see Signal Identifiers table (only available in NMEA 4.10 and later)
5 + N·4	cs	hexadecimal	-	*7F	Checksum
6 + N·4	CRLF	character	-	-	Carriage return and line feed

2.7.16 RLM

2.7.16.1 Return link message (RLM)

Message	**NMEA-Standard-RLM** **Return link message (RLM)**
Type	Output
Comment	The RLM sentence is used to transfer a Return link message from a Cospas-Sarsat recognized Return link service provider (RLSP). The RLM sentence supports communications to an emitting beacon once a distress alert has been detected, located and confirmed. The communications may include acknowledgement of the alert to the emitting beacon as well as optional text messages, and may also include remote beacon configuration and testing.
Information	*Class/ID:* 0xf0 0x0b *Number of fields:* 7
Structure	`$xxRLM,beacon,time,code,body*cs\r\n`
Examples	`$GARLM,00000078A9FBAD5,083559.00,3,C45B*57\r\n` `$GARLM,F7129D41BC6A78C,034433.02,3,B63CA732AFD419D2*57\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxRLM	string	-	$GARLM	RLM message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	beacon	hexadecimal	-	00000078A 9FBAD5	Beacon ID, identifies beacon intended to receive this message (fixed length 15 hexadecimal character field)
2	time	hhmmss.ss	-	083559.00	Time of reception field to indicate RLM timestamp in UTC. See section UTC representation in the integration manual for details.
3	code	character	-	3	Message code field to identify type of RLM Message Service: • 0 = Reserved for future RLM services • 1 = Acknowledgement service RLM • 2 = Command service RLM • 3 = Message service RLM • 4-E = Reserved for future RLM services • F = Test service RLM (currently used only by the Galileo program)
4	body	hexadecimal	-	C45B	Message body encapsulates the data parameters provided by the RLSP into hexadecimal format.
5	cs	hexadecimal	-	*57	Checksum
6	CRLF	character	-	-	Carriage return and line feed

2.7.17 RMC

2.7.17.1 Recommended minimum data

Message	**NMEA-Standard-RMC** **Recommended minimum data**
Type	Output
Comment	The recommended minimum sentence defined by NMEA for GNSS system data. ☞ The output of this message is dependent on the currently selected datum (default: WGS84)
Information	*Class/ID:* 0xf0 0x04 *Number of fields:* 16
Structure	`$xxRMC,time,status,lat,NS,lon,EW,spd,cog,date,mv,mvEW,posMode,navStatus*cs\r\n`
Example	`$GPRMC,083559.00,A,4717.11437,N,00833.91522,E,0.004,77.52,091202,,,A,V*57\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxRMC`	string	-	$GPRMC	RMC Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	`time`	hhmmss.ss	-	083559.00	UTC time. See section UTC representation in the integration manual for details.
2	`status`	character	-	A	Data validity status, see position fix flags description
3	`lat`	ddmm.mmmmm	-	4717.11437	Latitude (degrees and minutes), see format description
4	`NS`	character	-	N	North/South indicator
5	`lon`	dddmm.mmmmm	-	00833.91522	Longitude (degrees and minutes), see format description
6	`EW`	character	-	E	East/West indicator
7	`spd`	numeric	knots	0.004	Speed over ground
8	`cog`	numeric	deg	77.52	Course over ground
9	`date`	ddmmyy	-	091202	Date in day, month, year format. See section UTC representation in the integration manual for details.
10	`mv`	numeric	deg	-	Magnetic variation value
11	`mvEW`	character	-	-	Magnetic variation E/W indicator
12	`posMode`	character	-	A	Mode Indicator, see position fix flags description (only available in NMEA 2.3 and later)
13	`navStatus`	character	-	V	Navigational status indicator: V (Equipment is not providing navigational status information, fixed field, only available in NMEA 4.10 and later)
14	`cs`	hexadecimal	-	*57	Checksum
15	`CRLF`	character	-	-	Carriage return and line feed

2.7.18 TXT

2.7.18.1 Text transmission

Message	**NMEA-Standard-TXT** **Text transmission**
Type	Output
Comment	This message outputs various information on the receiver, such as power-up screen, software version etc. This message can be configured using the CFG-INFMSG configuration group.
Information	*Class/ID:* 0xf0 0x41 *Number of fields:* 7
Structure	`$xxTXT,numMsg,msgNum,msgType,text*cs\r\n`

Examples	`$GPTXT,01,01,02,u-blox ag - www.u-blox.com*50\r\n` `$GPTXT,01,01,02,ANTARIS ATR0620 HW 00000040*67\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxTXT`	string	-	$GPTXT	TXT Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	`numMsg`	numeric	-	01	Total number of messages in this transmission (range: 1-99)
2	`msgNum`	numeric	-	01	Message number in this transmission (range: 1-numMsg)
3	`msgType`	numeric	-	02	Text identifier (u-blox receivers specify the type of the message with this number): • 00 = Error • 01 = Warning • 02 = Notice • 07 = User
4	`text`	string	-	www.u-blox.com	Any ASCII text
5	`cs`	hexadecimal	-	*67	Checksum
6	`CRLF`	character	-	-	Carriage return and line feed

2.7.19 VLW

2.7.19.1 Dual ground/water distance

Message	**NMEA-Standard-VLW** **Dual ground/water distance**
Type	Output
Comment	The distance traveled, relative to the water and over the ground. This message relates to the odometer feature detailed in the integration manual.
Information	*Class/ID:* 0xf0 0x0f *Number of fields:* 11
Structure	`$xxVLW,twd,twdUnit,wd,wdUnit,tgd,tgdUnit,gd,gdUnit*cs\r\n`
Example	`$GPVLW,,N,,N,15.8,N,1.2,N*06\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`xxVLW`	string	-	$GPVLW	VLW Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	`twd`	numeric	nmi	-	Total cumulative water distance: null (fixed field)
2	`twdUnit`	character	-	N	Total cumulative water distance units: N (nautical miles, fixed field)
3	`wd`	numeric	nmi	-	Water distance since reset: null (fixed field)
4	`wdUnit`	character	-	N	Water distance since reset units: N (nautical miles, fixed field)
5	`tgd`	numeric	nmi	15.8	Total cumulative ground distance (only available in NMEA 4.00 and later)
6	`tgdUnit`	character	-	N	Total cumulative ground distance units: N (nautical miles, fixed field, only available in NMEA 4.00 and later)
7	`gd`	numeric	nmi	1.2	Ground distance since reset (only available in NMEA 4.00 and later)

8	gdUnit	character	-	N	Ground distance since reset units: N (nautical miles, fixed field, only available in NMEA 4.00 and later)
9	cs	hexadecimal	-	*06	Checksum
10	CRLF	character	-	-	Carriage return and line feed

2.7.20 VTG

2.7.20.1 Course over ground and ground speed

Message	**NMEA-Standard-VTG** **Course over ground and ground speed**
Type	Output
Comment	Velocity is given as course over ground (COG) and speed over ground (SOG).
Information	*Class/ID:* 0xf0 0x05 *Number of fields:* 12
Structure	`$xxVTG,cogt,cogtUnit,cogm,cogmUnit,sogn,sognUnit,sogk,sogkUnit,posMode*cs\r\n`
Example	`$GPVTG,77.52,T,,M,0.004,N,0.008,K,A*06\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	xxVTG	string	-	$GPVTG	VTG Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	cogt	numeric	degrees	77.52	Course over ground (true)
2	cogtUnit	character	-	T	Course over ground units: T (degrees true, fixed field)
3	cogm	numeric	degrees	-	Course over ground (magnetic)
4	cogmUnit	character	-	M	Course over ground units: M (degrees magnetic, fixed field)
5	sogn	numeric	knots	0.004	Speed over ground
6	sognUnit	character	-	N	Speed over ground units: N (knots, fixed field)
7	sogk	numeric	km/h	0.008	Speed over ground
8	sogkUnit	character	-	K	Speed over ground units: K (kilometers per hour, fixed field)
9	posMode	character	-	A	Mode indicator, see position fix flags description (only available in NMEA 2.3 and later)
10	cs	hexadecimal	-	*06	Checksum
11	CRLF	character	-	-	Carriage return and line feed

2.7.21 ZDA

2.7.21.1 Time and date

Message	**NMEA-Standard-ZDA** **Time and date**
Type	Output
Comment	UTC, day, month, year and local time zone.
Information	*Class/ID:* 0xf0 0x08 *Number of fields:* 9
Structure	`$xxZDA,time,day,month,year,ltzh,ltzn*cs\r\n`
Example	`$GPZDA,082710.00,16,09,2002,00,00*64\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*

0	xxZDA	string	-	$GPZDA	ZDA Message ID (xx = current Talker ID, see NMEA Talker IDs table)
1	time	hhmmss.ss	-	082710.00	UTC Time. See section UTC representation in the integration manual for details.
2	day	dd	day	16	UTC day (range: 1-31)
3	month	mm	month	09	UTC month (range: 1-12)
4	year	yyyy	year	2002	UTC year
5	ltzh	xx	-	00	Local time zone hours (fixed field, always 00)
6	ltzn	zz	-	00	Local time zone minutes (fixed field, always 00)
7	cs	hexadecimal	-	*64	Checksum
8	CRLF	character	-	-	Carriage return and line feed

2.8 PUBX messages

Proprietary NMEA messages for u-blox positioning receivers. See also NMEA-proprietary messages.

2.8.1 CONFIG (PUBX,41)

2.8.1.1 Set protocols and baud rate

Message	**NMEA-PUBX-CONFIG** **Set protocols and baud rate**
Type	Set
Comment	
Information	*Class/ID:* 0xf1 0x41 *Number of fields:* 9
Structure	`$PUBX,41,portId,inProto,outProto,baudrate,autobauding*cs\r\n`
Example	`$PUBX,41,1,0007,0003,19200,0*25\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	PUBX	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	41	Proprietary message identifier
2	portId	numeric	-	1	ID of communication port. See section Communication ports in the integration manual for details.
3	inProto	hexadecimal	-	0007	Input protocol mask. Bitmask, specifying which protocols(s) are allowed for input. See section Communication ports in the integration manual for details.
4	outProto	hexadecimal	-	0003	Output protocol mask. Bitmask, specifying which protocols(s) are allowed for input. See section Communication ports in the integration manual for details.
5	baudrate	numeric	bits/s	19200	Baud rate
6	autobauding	numeric	-	-	Autobauding: 1=enable, 0=disable (not supported on u-blox 5, set to 0)
7	cs	hexadecimal	-	*25	Checksum
8	CRLF	character	-	-	Carriage return and line feed

2.8.2 POSITION (PUBX,00)

2.8.2.1 Poll a PUBX,00 message

Message	**NMEA-PUBX-POSITION** **Poll a PUBX,00 message**
Type	Poll request
Comment	A PUBX,00 message is polled by sending the PUBX,00 message without any data fields.
Information	*Class/ID:* 0xf1 0x00 *Number of fields:* 4
Structure	`$PUBX,00*33\r\n`
Example	`$PUBX,00*33\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`PUBX`	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	`msgId`	numeric	-	00	Set to 00 to poll a PUBX,00 message
2	`cs`	hexadecimal	-	*33	Checksum
3	`CRLF`	character	-	-	Carriage return and line feed

2.8.2.2 Lat/Long position data

Message	**NMEA-PUBX-POSITION** **Lat/Long position data**
Type	Output
Comment	This message contains position solution data. The datum selection may be changed using the message UBX-CFG-DAT. ☞ The output of this message is dependent on the currently selected datum (default: WGS84).
Information	*Class/ID:* 0xf1 0x00 *Number of fields:* 23
Structure	`$PUBX,00,time,lat,NS,long,EW,altRef,navStat,hAcc,vAcc,SOG,COG,vVel,diffAge,HDOP,VDOP ↲ ,TDOP,numSvs,reserved,DR,*cs\r\n`
Example	`$PUBX,00,081350.00,4717.113210,N,00833.915187,E,546.589,G3,2.1,2.0,0.007,77.52,0.007 ↲ ,,0.92,1.19,0.77,9,0,0*5F\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`PUBX`	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	`msgId`	numeric	-	00	Proprietary message identifier: 00
2	`time`	hhmmss.ss	-	081350.00	UTC time. See section UTC representation in the integration manual for details.
3	`lat`	ddmm.mmmmm	-	4717.113210	Latitude (degrees and minutes), see format description
4	`NS`	character	-	N	North/South Indicator
5	`long`	dddmm.mmmmm	-	00833.915187	Longitude (degrees and minutes), see format description
6	`EW`	character	-	E	East/West indicator
7	`altRef`	numeric	m	546.589	Altitude above user datum ellipsoid

8	navStat	string	-	G3	Navigation Status: • NF = No Fix • DR = Dead reckoning only solution • G2 = Stand alone 2D solution • G3 = Stand alone 3D solution • D2 = Differential 2D solution • D3 = Differential 3D solution • RK = Combined GPS + dead reckoning solution • TT = Time only solution
9	hAcc	numeric	m	2.1	Horizontal accuracy estimate
10	vAcc	numeric	m	2.0	Vertical accuracy estimate
11	SOG	numeric	km/h	0.007	Speed over ground
12	COG	numeric	deg	77.52	Course over ground
13	vVel	numeric	m/s	0.007	Vertical velocity (positive downwards)
14	diffAge	numeric	s	-	Age of differential corrections (blank when DGPS is not used)
15	HDOP	numeric	-	0.92	HDOP, Horizontal Dilution of Precision
16	VDOP	numeric	-	1.19	VDOP, Vertical Dilution of Precision
17	TDOP	numeric	-	0.77	TDOP, Time Dilution of Precision
18	numSvs	numeric	-	9	Number of satellites used in the navigation solution
19	reserved	numeric	-	-	Reserved, always set to 0
20	DR	numeric	-	-	DR used
21	cs	hexadecimal	-	*5B	Checksum
22	CRLF	character	-	-	Carriage return and line feed

2.8.3 RATE (PUBX,40)

2.8.3.1 Set NMEA message output rate

Message	**NMEA-PUBX-RATE** **Set NMEA message output rate**
Type	Set
Comment	Set/Get message rate configuration (s) to/from the receiver. • Send rate is relative to the event a message is registered on. For example, if the rate of a navigation message is set to 2, the message is sent every second navigation solution.
Information	*Class/ID:* 0xf1 0x40 *Number of fields:* 11
Structure	`$PUBX,40,msgId,rddc,rus1,rus2,rusb,rspi,reserved*cs\r\n`
Example	`$PUBX,40,GLL,1,0,0,0,0*5D\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	PUBX	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	ID	numeric	-	40	Proprietary message identifier
2	msgId	string	-	GLL	NMEA message identifier
3	rddc	numeric	cycles	1	output rate on DDC • 0 disables that message from being output on this port • 1 means that this message is output every epoch

4	rus1	numeric	cycles	1	output rate on USART 1 • 0 disables that message from being output on this port • 1 means that this message is output every epoch
5	rus2	numeric	cycles	1	output rate on USART 2 • 0 disables that message from being output on this port • 1 means that this message is output every epoch
6	rusb	numeric	cycles	1	output rate on USB • 0 disables that message from being output on this port • 1 means that this message is output every epoch
7	rspi	numeric	cycles	1	output rate on SPI • 0 disables that message from being output on this port • 1 means that this message is output every epoch
8	reserved	numeric	-	-	Reserved: always fill with 0
9	cs	hexadecimal	-	*5D	Checksum
10	CRLF	character	-	-	Carriage return and line feed

2.8.4 SVSTATUS (PUBX,03)

2.8.4.1 Poll a PUBX,03 message

Message	**NMEA-PUBX-SVSTATUS** **Poll a PUBX,03 message**
Type	Poll request
Comment	A PUBX,03 message is polled by sending the PUBX,03 message without any data fields.
Information	*Class/ID:* 0xf1 0x03 *Number of fields:* 4
Structure	`$PUBX,03*30\r\n`
Example	`$PUBX,03*30\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	PUBX	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	03	Set to 03 to poll a PUBX,03 message
2	cs	hexadecimal	-	*30	Checksum
3	CRLF	character	-	-	Carriage return and line feed

2.8.4.2 Satellite status

Message	**NMEA-PUBX-SVSTATUS** **Satellite status**
Type	Output
Comment	The PUBX,03 message contains satellite status information.
Information	*Class/ID:* 0xf1 0x03 *Number of fields:* 5 + n·6
Structure	`$PUBX,03,GT{,sv,s,az,el,cno,lck},*cs\r\n`

Example	`$PUBX,03,11,23,-,,,45,010,29,-,,,46,013,07,-,,,42,015,08,U,067,31,42,025,10,U,195,33 ↲`
	`,46,026,18,U,326,08,39,026,17,-,,,32,015,26,U,306,66,48,025,27,U,073,10,36,026,28,U, ↲`
	`089,61,46,024,15,-,,,39,014*0D\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*

0	PUBX	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	03	Proprietary message identifier: 03
2	n	numeric	-	11	Number of GNSS satellites tracked
Start of repeated group (n times)					
3 + n·6	sv	numeric	-	23	Satellite ID according to UBX svId mapping (see Satellite Numbering)
4 + n·6	s	character	-	-	Satellite status: • - = Not used • U = Used in solution • e = Ephemeris available, but not used for navigation
5 + n·6	az	numeric	deg	-	Satellite azimuth (range: 0-359)
6 + n·6	el	numeric	deg	-	Satellite elevation (<= 90)
7 + n·6	cno	numeric	dBHz	45	Signal strength (C/N0, range 0-99), blank when not tracking
8 + n·6	lck	numeric	s	010	Satellite carrier lock time (range: 0-64) • 0 = code lock only • 64 = lock for 64 seconds or more
End of repeated group (n times)					
3 + n·6	cs	hexadecimal	-	*0D	Checksum
4 + n·6	CRLF	character	-	-	Carriage return and line feed

2.8.5 TIME (PUBX,04)

2.8.5.1 Poll a PUBX,04 message

Message	**NMEA-PUBX-TIME** **Poll a PUBX,04 message**				
Type	Poll request				
Comment	A PUBX,04 message is polled by sending the PUBX,04 message without any data fields.				
Information	*Class/ID:* 0xf1 0x04	*Number of fields:* 4			
Structure	$PUBX,04*37\r\n				
Example	$PUBX,04*37\r\n				
Payload:					
Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	PUBX	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	msgId	numeric	-	04	Set to 04 to poll a PUBX,04 message
2	cs	hexadecimal	-	*37	Checksum
3	CRLF	character	-	-	Carriage return and line feed

2.8.5.2 Time of day and clock information

Message	**NMEA-PUBX-TIME** **Time of day and clock information**				
Type	Output				
Comment					
Information	*Class/ID:* 0xf1 0x04	*Number of fields:* 12			
Structure	$PUBX,04,time,date,utcTow,utcWk,leapSec,clkBias,clkDrift,tpGran,*cs\r\n				

Example `$PUBX,04,073731.00,091202,113851.00,1196,15D,1930035,-2660.664,43,*3C\r\n`

Payload:

Field	*Name*	*Format*	*Unit*	*Example*	*Description*
0	`PUBX`	string	-	$PUBX	Message ID, UBX protocol header, proprietary sentence
1	`msgId`	numeric	-	04	Proprietary message identifier: 04
2	`time`	hhmmss.ss	-	073731.00	UTC time. See section UTC representation in the integration manual for details.
3	`date`	ddmmyy	-	091202	UTC date, day, month, year. See section UTC representation in the integration manual for details.
4	`utcTow`	numeric	s	113851.00	UTC time of week
5	`utcWk`	numeric	-	1196	UTC week number, continues beyond 1023
6	`leapSec`	numeric/ text	s	15D	Leap seconds (not supported for protocol versions less than 13.01) The number is marked with a *D* if the value is the firmware default value. If the value is not marked it has been received from a satellite.
7	`clkBias`	numeric	ns	1930035	Receiver clock bias
8	`clkDrift`	numeric	ns/s	-2660.664	Receiver clock drift
9	`tpGran`	numeric	ns	43	Time pulse granularity, the quantization error of the TIMEPULSE pin
10	`cs`	hexadecimal	-	*3C	Checksum
11	`CRLF`	character	-	-	Carriage return and line feed

3 UBX protocol

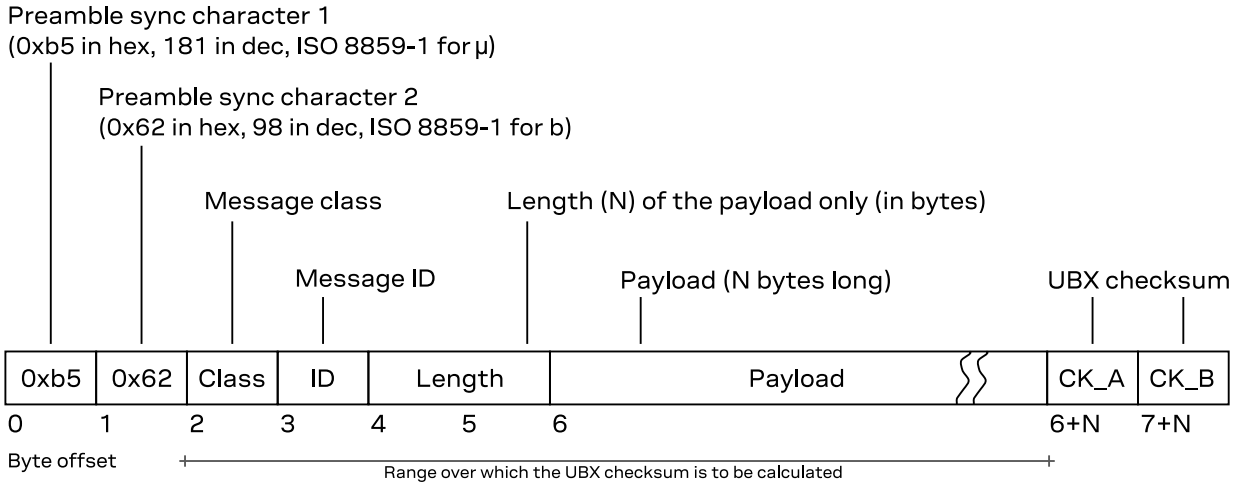
3.1 UBX protocol key features

u-blox receivers support a u-blox-proprietary protocol to communicate with a host computer. This protocol has the following key features:

- Compact – uses 8-bit binary data
- Checksum protected – uses a low-overhead checksum algorithm
- Modular – uses a two-stage message identifier (Class and Message ID)

3.2 UBX frame structure

The structure of a basic UBX frame is shown in the following diagram.



- Every *frame* starts with a 2-byte *preamble* consisting of two synchronization characters: `0xb5` and `0x62`.
- A 1-byte *message class* field follows. A class is a group of messages that are related to each other.
- A 1-byte *message ID* field defines the message that is to follow.
- A 2-byte *length* field follows. The length is defined as being that of the payload only. It does not include the preamble, message class, message ID, length, or UBX checksum fields. The number format of the length field is an unsigned little-endian 16-bit integer (a "U2" in UBX data types).
- The *payload* field contains a variable number (= *length*) of bytes.
- The two 1-byte *CK_A* and *CK_B* fields hold a 16-bit checksum whose calculation is defined in UBX checksum section. This concludes the frame.

3.3 UBX payload definition rules

This section contains the rules and guidelines for UBX message payloads. See also UBX message example.

3.3.1 UBX structure packing

Values are placed in such an order that structure packing is not a problem. This means that two-byte values shall start on offsets that are a multiple of two; four-byte values shall start at a multiple of four; and so on.

3.3.2 UBX reserved elements

Some messages contain reserved fields or bits to allow for future expansion. The contents of these elements should be ignored in output messages and must be set to zero in input messages. Where a message is output and subsequently returned to the receiver as an input message, reserved elements can either be explicitly set to zero or left with whatever value they were output with.

For fields in a bitfield the same rules apply. Note that bits not described are automatically reserved and are not explicitly stated (see UBX message example).

3.3.3 UBX undefined values

The description of some fields provide specific meanings for specific values. For example, the field `gnssId` appears in many UBX messages and uses 0 to indicate GPS, 1 for SBAS and so on (see GNSS identifiers for details); however it is usually stored in a byte with far more possible values than the handful currently defined. All such undefined values are reserved for future expansion and therefore should not be used.

3.3.4 UBX conditional values

Some UBX messages use validity flag fields to indicate whether the values of some value fields are valid. For example, the UBX-NAV-PVT message has the `validDate` and `validTime` fields that indicate whether the date (`year`, `month` and `day` fields), and, respectively, the time (`hour`, `min` and `sec` fields) are valid. This means that these value fields will only contain meaningful data if the corresponding flag field is set (has the value 1).

3.3.5 UBX data types

The following data types (number formats) are defined.

Name	Type	Size (Bytes)	Range	Resolution
U1	unsigned 8-bit integer	1	$0...2^8-1$	1
I1	signed 8-bit integer, two's complement	1	$-2^7...2^7-1$	1
X1	8-bit bitfield	1	n/a	n/a
U2	unsigned little-endian 16-bit integer	2	$0...2^{16}-1$	1
I2	signed little-endian 16-bit integer, two's complement	2	$-2^{15}...2^{15}-1$	1
X2	16-bit little-endian bitfield	2	n/a	n/a
U4	unsigned little-endian 32-bit integer	4	$0...2^{32}-1$	1
I4	signed little-endian 32-bit integer, two's complement	4	$-2^{31}...2^{31}-1$	1
X4	32-bit little-endian bitfield	4	n/a	n/a

Name	Type	Size (Bytes)	Range	Resolution
R4	IEEE 754 single (32-bit) precision	4	$-2^{127}...2^{127}$	~ value·2^{-24}
R8	IEEE 754 double (64-bit) precision	8	$-2^{1023}...2^{1023}$	~ value·2^{-53}
CH	ASCII / ISO 8859-1 char (8-bit)	1	n/a	n/a
$U_{:n}$	unsigned bitfield value of *n* bits width	var.	variable	variable
$I_{:n}$	signed (two's complement) bitfield value of *n* bits width	var.	variable	variable
$S_{:n}$	signed bitfield value of *n* bits width, in sign (most significant bit) and magnitude (remaining bits) notation	var.	variable	variable

3.3.6 UBX fields scale and unit

Fields in UBX messages can have a unit defined. Whenever possible, SI units and symbols are used (e.g. "m" for meters, "s" for seconds). For civil (UTC) time representation units of years (y), months (month), days (d), hours (h), minutes (min) and seconds (s) are used.

Fields in UBX messages can have a scale factor defined. Unity (factor 1) is assumed if no scale is specified. For integer type fields this is often combined with a unit. When a scale is combined with a unit, the scale represents the smallest storage unit. For example, if meters (m) are expressed (stored) in centimeters the scale would be 0.01 (or 1e-2). This is equivalent of specifying a unit of centimeters (cm) and no scale.

The description of some integer values (e.g. U2, I4 or I8) indicates a fixed-point format (e.g. [UU.FF], [IIIII.FFF] or [IIIIIII.FFFFFFFF]). The fixed-point value can be retrieved from the integer value by first casting it to appropriate type (e.g. as a floating-point number) and then scaling it with the indicated scaling factor.

3.3.7 UBX repeated fields

There are two types of repetitions in UBX messages. The first type specifies that a single field is repeated a constant number of times. This repetition is defined in the type of the field. For example, the UBX message example can specify a field `data` of type *U1[5]*. In this case the `data` field should be interpreted as an array of five U1 values.

The second type of repetition in messages is referred to as *repeated groups*, which groups one or more fields into a block of payload data. There are several types of repetition:

- The number of repetitions of *variable-by-field group* is indicated by another, earlier field in the same message. The number of repetitions can be zero or more, depending on the value of the referenced field.
- A *constant group* has a constant number of repetitions.
- An *optional group* is repeated zero or one times, depending on the available payload data. That is, the fields are present in the message only if the payload of the message is large enough to cover the whole group of fields.
- The number of repetitions of a *variable-by-size* group is given by the available payload size. The group will repeat until there is not enough payload data left to cover the whole group of fields another time.

Note that only some combinations of repeated groups of fields are possible in a single message. See also UBX payload decoding.

3.3.8 UBX payload decoding

UBX message payloads are designed so that the data (fields) can be extracted by a single pass through the payload from start to end. Fixed-size messages are the trivial case where the offset of all fields is unambiguously defined. Variable-size messages have variable number of repetitions of one or multiple groups of fields. For groups where the number of repetitions is given by the value of another field, that field can always be found at a fixed offset in the message payload before the respective group of fields. Groups whose number of repetitions depend on the payload size can only be the last group of fields in a message and only one such group may exist in a message. See also UBX repeated fields.

3.4 UBX checksum

The checksum is calculated over the message, starting and including the class field up until, but excluding, the checksum fields (see the figure UBX frame structure).

The checksum algorithm used is the 8-bit Fletcher algorithm, which is used in the TCP standard RFC 1145). This algorithm works as follows:

- `Buffer[N]` is an array of bytes that contains the data over which the checksum is to be calculated.
- The two `CK_A` and `CK_A` values are 8-bit unsigned integers, only! If implementing with larger-sized integer values, make sure to mask both `CK_A` and `CK_B` with the value `0xff` after both operations in the loop.
- After the loop, the two *U1* values contain the checksum, transmitted after the message payload, which concludes the frame.

```
CK_A = 0, CK_B = 0
For (I = 0; I < N; I++)
{
    CK_A = CK_A + Buffer[I]
    CK_B = CK_B + CK_A
}
```

3.5 UBX message flow

There are certain features associated with the messages being sent back and forth:

3.5.1 UBX acknowledgement

When messages from the class CFG are sent to the receiver, the receiver will send an "acknowledge" (UBX-ACK-ACK) or a "not acknowledge" (UBX-ACK-NAK) message back to the sender, depending on whether or not the message was processed correctly.

Some messages from other classes also use the same acknowledgement mechanism.

3.5.2 UBX polling mechanism

The UBX protocol is designed so that messages can be polled by sending the message required to the receiver but without a payload (or with just a single parameter that identifies the poll request). The receiver then responds with the same message with the payload populated.

3.6 GNSS, satellite, and signal numbering

See GNSS, satellite, and signal identifiers for details on how GNSS, satellites and signals are numbered in the UBX protocol.

3.7 UBX message example

This is an example of the definition of UBX messages as shown in the following sections.

Message ❶	**UBX-DEMO-EXAMPLE** **Example demo message**				
Type ❷	Periodic/polled				
Comment ❸	This is a comment that describes the use of the demo example message. There can be references to other sections in the documentation (such as: UBX protocol). ☞ Note that there can be important remarks here.				
Message Structure ❹	*Header*	*Class ID*	*Length (bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01 0x07	16 + numRepeat*4	*see below*	CK_A CK_B

Payload description: ❺

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U4	`aField`	-	-	a field that contains an unsigned integer with no particular scale or unit
4	I4	`anotherField`	1e-2	m	a field that contains a length in meters (m) with a scale of 1e-2 (= 0.01), i.e. a length in centimeters
8	X2	`bitfield` ❻	-	-	this field contains flags or values smaller than one byte, whose definition follows below (bits not described are reserved)
bit 0	U:1	`aFieldValid`	-	-	the first bit in `bitfield` indicates whether the `aField` is valid or not (see UBX conditional values)
bit 1	U:1	`someFlag`	-	-	the second bit is a flag (1 = true, 0 = false)
bits 5...2	U:4	`aBitFieldValue`	-	-	a 4-bits value (range: 0...15)
10	U1[5] ❼	`reserved0`	-	-	a reserved field, whose value shall be ignored (in output messages) or set to 0 (in input messages)
15	U1	`numRepeat`	-	-	number of repetitions in the group of fields below
Start of repeated group (`numRepeat` times) ❽					
16 + n*4	I2	`someValue`	-	-	a signed value in a repeated group of fields
18 + n*4	U2	`anotherValue`	-	-	another value in a repeated group of fields
End of repeated group (`numRepeat` times)					

❶ The first line shows the message name (see Message naming). The second line shows a short description of the message.

❷ The message type (see Message types).

❸ This section contains comments that describe the message. Often links to other related sections in the documentation or other related messages are found here.

❹ The message structure gives the parameters for the UBX frame structure, notably the message class and message ID values and the payload length. For many messages the payload length is a fixed number (of bytes). Messages that contain repeated blocks of information (fields) have a variable payload (see UBX repeated fields).

❺ The message payload definition is given as a list of fields and their parameters. Each field starts at a specified offset (in bytes) in the payload (see also UBX structure packing), is of a specific type (see UBX data types), has a unique name (within the message), and a description. Optionally, fields can have a scale and/or a unit (see UBX fields scale and unit).

❻ Bitfields ("X" types) are broken down into smaller parts. Each part can be one or more bits wide. Values that are two or more bits wide can be unsigned or one of two signed value representation (see UBX data types). Note that the ten unused bits 15...6 are not explicitly stated as UBX reserved elements.

❼ Fields can be arrays of values of the same type (see UBX repeated fields).

❽ Groups of fields can be repeated in the payload. The number of repetitions can be given by another field in the message (this example), a constant number, zero or one times (known as "optional group"), or derived from the remaining payload size (labeled as "repeated N times"). See also UBX repeated fields and UBX payload decoding.

3.8 UBX messages overview

Message	*Class/ID*	*Description (Type)*
UBX-ACK – Acknowledgement and negative acknowledgement messages		
UBX-ACK-ACK	0x05 0x01	• Message acknowledged (Output)
UBX-ACK-NAK	0x05 0x00	• Message not acknowledged (Output)
UBX-CFG – Configuration and command messages		
UBX-CFG-CFG	0x06 0x09	• Clear, save and load configurations (Command)
UBX-CFG-RST	0x06 0x04	• Reset receiver / Clear backup data structures (Command)
UBX-CFG-VALDEL	0x06 0x8c	• Delete configuration item values (Set) • Delete configuration item values (with transaction) (Set)
UBX-CFG-VALGET	0x06 0x8b	• Get configuration items (Poll request) • Configuration items (Polled)
UBX-CFG-VALSET	0x06 0x8a	• Set configuration item values (Set) • Set configuration item values (with transaction) (Set)
UBX-INF – Information messages		
UBX-INF-DEBUG	0x04 0x04	• ASCII output with debug contents (Output)
UBX-INF-ERROR	0x04 0x00	• ASCII output with error contents (Output)
UBX-INF-NOTICE	0x04 0x02	• ASCII output with informational contents (Output)
UBX-INF-TEST	0x04 0x03	• ASCII output with test contents (Output)
UBX-INF-WARNING	0x04 0x01	• ASCII output with warning contents (Output)
UBX-MGA – GNSS assistance (A-GNSS) messages		
UBX-MGA-ACK	0x13 0x60	• Multiple GNSS acknowledge message (Output)
UBX-MGA-ANO	0x13 0x20	• Multiple GNSS AssistNow Offline assistance (Input)
UBX-MGA-BDS	0x13 0x03	• BeiDou ephemeris assistance for satellites svId 1..37 (Input) • BeiDou almanac assistance (Input) • BeiDou health assistance (Input) • BeiDou UTC assistance (Input) • BeiDou ionosphere assistance (Input)

Message	Class/ID	Description (Type)
UBX-MGA-DBD	0x13 0x80	• Poll the navigation database (Poll request) • Navigation database dump entry (Input/output)
UBX-MGA-FLASH	0x13 0x21	• Transfer MGA-ANO data block to flash (Input) • Finish flashing MGA-ANO data (Input) • Acknowledge last FLASH-DATA or -STOP (Output)
UBX-MGA-GAL	0x13 0x02	• Galileo ephemeris assistance (Input) • Galileo almanac assistance (Input) • Galileo GPS time offset assistance (Input) • Galileo UTC assistance (Input)
UBX-MGA-GPS	0x13 0x00	• GPS ephemeris assistance (Input) • GPS almanac assistance (Input) • GPS health assistance (Input) • GPS UTC assistance (Input) • GPS ionosphere assistance (Input)
UBX-MGA-INI	0x13 0x40	• Initial position assistance (Input) • Initial time assistance (Input) • Initial clock drift assistance (Input) • Initial frequency assistance (Input) • Earth orientation parameters assistance (Input)
UBX-MGA-QZSS	0x13 0x05	• QZSS ephemeris assistance (Input) • QZSS almanac assistance (Input) • QZSS health assistance (Input)
UBX-MON – Monitoring messages		
UBX-MON-COMMS	0x0a 0x36	• Communication port information (Periodic/polled)
UBX-MON-GNSS	0x0a 0x28	• Information message major GNSS selection (Polled)
UBX-MON-HW3	0x0a 0x37	• I/O pin status (Periodic/polled)
UBX-MON-PATCH	0x0a 0x27	• Installed patches (Polled)
UBX-MON-RCVRSTAT	0x0a 0x40	• Status of the configurable receiver features (Polled)
UBX-MON-RF	0x0a 0x38	• RF information (Periodic/polled)
UBX-MON-RXR	0x0a 0x21	• Receiver status information (Output)
UBX-MON-SPAN	0x0a 0x31	• Signal characteristics (Periodic/polled)
UBX-MON-VER	0x0a 0x04	• Poll receiver and software version (Poll request) • Receiver and software version (Polled)
UBX-NAV – Navigation solution messages		
UBX-NAV-AOPSTATUS	0x01 0x60	• AssistNow Autonomous status (Periodic/polled)
UBX-NAV-CLOCK	0x01 0x22	• Clock solution (Periodic/polled)
UBX-NAV-COV	0x01 0x36	• Covariance matrices (Periodic/polled)
UBX-NAV-DOP	0x01 0x04	• Dilution of precision (Periodic/polled)
UBX-NAV-EOE	0x01 0x61	• End of epoch (Periodic)
UBX-NAV-ODO	0x01 0x09	• Odometer solution (Periodic/polled)
UBX-NAV-ORB	0x01 0x34	• GNSS orbit database info (Periodic/polled)
UBX-NAV-PL	0x01 0x62	• Protection level information (Periodic)
UBX-NAV-POSECEF	0x01 0x01	• Position solution in ECEF (Periodic/polled)
UBX-NAV-POSLLH	0x01 0x02	• Geodetic position solution (Periodic/polled)
UBX-NAV-PVT	0x01 0x07	• Navigation position velocity time solution (Periodic/polled)
UBX-NAV-RESETODO	0x01 0x10	• Reset odometer (Command)
UBX-NAV-SAT	0x01 0x35	• Satellite information (Periodic/polled)
UBX-NAV-SBAS	0x01 0x32	• SBAS status data (Periodic/polled)

Message	Class/ID	Description (Type)
UBX-NAV-SIG	0x01 0x43	• Signal information (Periodic/polled)
UBX-NAV-SLAS	0x01 0x42	• QZSS L1S SLAS status data (Periodic/polled)
UBX-NAV-STATUS	0x01 0x03	• Receiver navigation status (Periodic/polled)
UBX-NAV-TIMEBDS	0x01 0x24	• BeiDou time solution (Periodic/polled)
UBX-NAV-TIMEGAL	0x01 0x25	• Galileo time solution (Periodic/polled)
UBX-NAV-TIMEGPS	0x01 0x20	• GPS time solution (Periodic/polled)
UBX-NAV-TIMELS	0x01 0x26	• Leap second event information (Periodic/polled)
UBX-NAV-TIMENAVIC	0x01 0x63	• NavIC time solution (Periodic/polled)
UBX-NAV-TIMEQZSS	0x01 0x27	• QZSS time solution (Periodic/polled)
UBX-NAV-TIMEUTC	0x01 0x21	• UTC time solution (Periodic/polled)
UBX-NAV-VELECEF	0x01 0x11	• Velocity solution in ECEF (Periodic/polled)
UBX-NAV-VELNED	0x01 0x12	• Velocity solution in NED frame (Periodic/polled)
UBX-RXM – Receiver manager messages		
UBX-RXM-MEASX	0x02 0x14	• Satellite measurements for RRLP (Periodic/polled)
UBX-RXM-PMREQ	0x02 0x41	• Power management request (Command)
UBX-RXM-RLM	0x02 0x59	• Galileo SAR short-RLM report (Output) • Galileo SAR long-RLM report (Output)
UBX-RXM-SFRBX	0x02 0x13	• Broadcast navigation data subframe (Output)
UBX-SEC – Security messages		
UBX-SEC-SIG	0x27 0x09	• Signal security information (Periodic/polled)
UBX-SEC-SIGLOG	0x27 0x10	• Signal security log (Periodic/polled)
UBX-SEC-UNIQID	0x27 0x03	• Unique chip ID (Output)
UBX-TIM – Timing messages		
UBX-TIM-TM2	0x0d 0x03	• Time mark data (Periodic/polled)
UBX-TIM-TP	0x0d 0x01	• Time pulse time data (Periodic/polled)
UBX-TIM-VRFY	0x0d 0x06	• Sourced time verification (Periodic/polled)
UBX-UPD – Firmware update messages		
UBX-UPD-SOS	0x09 0x14	• Poll backup restore status (Poll request) • Create backup in flash (Command) • Clear backup in flash (Command) • Backup creation acknowledge (Output) • System restored from backup (Output)

3.9 UBX-ACK (0x05)

The messages in the UBX-ACK class are used to indicate acknowledgement or rejection (i.e. negative acknowledgement) of input messages, such as UBX-CFG messages.

3.9.1 UBX-ACK-ACK (0x05 0x01)

3.9.1.1 Message acknowledged

Message	UBX-ACK-ACK Message acknowledged
Type	Output
Comment	Output upon processing of an input message. A UBX-ACK-ACK is sent as soon as possible but at least within one second.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x05	0x01	2	*see below*	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	`clsID`	-	-	Class ID of the Acknowledged Message
1	U1	`msgID`	-	-	Message ID of the Acknowledged Message

3.9.2 UBX-ACK-NAK (0x05 0x00)

3.9.2.1 Message not acknowledged

Message	**UBX-ACK-NAK** **Message not acknowledged**
Type	Output
Comment	Output upon processing of an input message. A UBX-ACK-NAK is sent as soon as possible but at least within one second.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x05	0x00	2	*see below*	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	`clsID`	-	-	Class ID of the Not-Acknowledged Message
1	U1	`msgID`	-	-	Message ID of the Not-Acknowledged Message

3.10 UBX-CFG (0x06)

The messages in the UBX-CFG class are used to configure the receiver and poll current configuration values as well as for sending commands to the receiver. Unless stated otherwise, any message in this class sent to the receiver is either acknowledged (by a UBX-ACK-ACK message) if processed successfully or rejected (with a UBX-ACK-NAK message) if processed unsuccessfully.

3.10.1 UBX-CFG-CFG (0x06 0x09)

3.10.1.1 Clear, save and load configurations

Message	**UBX-CFG-CFG** **Clear, save and load configurations**
Type	Command
Comment	See Receiver configuration for a detailed description on how receiver configuration should be used. The behavior of this message has changed for protocol versions greater than 23.01. Use UBX-CFG-VALSET and UBX-CFG-VALDEL with the appropriate layers instead. These new messages support selective saving and clearing to retain the behavior removed from this message. The three masks which were used to clear, save and load a subsection of configuration have lost their meaning. It is no longer possible to save or clear a subsection of the configuration using this message. The behavior of the masks is now: • if any bit is set in the clearMask: all configuration in the selected non-volatile memory is deleted • if any bit is set in the saveMask: all current configuration is stored (copied) to the selected layers • if any bit is set in the loadMask: The current configuration is discarded and rebuilt from all the lower layers Note that commands can be combined. The sequence of execution is clear, save, then load. The receiver replies with a single UBX-ACK-ACK or UBX-ACK-NAK. A UBX-ACK-ACK indicates that all operations were successful. A UBX-ACK-NAK indicates that at least one of the configured operations was unsuccessful. It is recommended to send individual commands for a more comprehensive monitoring of the success or not of the individual operations.

☞ Old functionality of this message is not available in protocol versions greater than 23.01. Use UBX-CFG-VALSET, UBX-CFG-VALGET, UBX-CFG-VALDEL instead.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x06	0x09	12 + [0,1]	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	X4	clearMask	-	-	Mask for configuration to clear
bits 31...0	U:32	clearAll	-	-	Clear all saved configuration from the selected non-volatile memory if any bit is set
4	X4	saveMask	-	-	Mask for configuration to save
bits 31...0	U:32	saveAll	-	-	Save all current configuration to the selected non-volatile memory if any bit is set
8	X4	loadMask	-	-	Mask for configuration to load
bits 31...0	U:32	loadAll	-	-	Discard current configuration and rebuilt it from lower non-volatile memory layers if any bit is set
Start of optional group					
12	X1	deviceMask	-	-	Mask which selects the memory devices for saving and/or clearing operation Note that if a deviceMask is not provided, the receiver defaults the operation requested to battery-backed RAM (BBR) and Flash (if available)
bit 0	U:1	devBBR	-	-	Battery-backed RAM
bit 1	U:1	devFlash	-	-	Flash
bit 2	U:1	devEEPROM	-	-	EEPROM (only supported for protocol versions less than 14.00)
bit 4	U:1	devSpiFlash	-	-	SPI Flash (only supported for protocol versions less than 14.00)
End of optional group					

3.10.2 UBX-CFG-RST (0x06 0x04)

3.10.2.1 Reset receiver / Clear backup data structures

Message	**UBX-CFG-RST** **Reset receiver / Clear backup data structures**
Type	Command
Comment	Do not expect this message to be acknowledged by the receiver. • Newer FW version will not acknowledge this message at all. • Older FW version will acknowledge this message but the acknowledge may not be sent completely before the receiver is reset.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

3	U1	reserved0	-	-	Reserved

3.10.3 UBX-CFG-VALDEL (0x06 0x8c)

3.10.3.1 Delete configuration item values

Message	**UBX-CFG-VALDEL** **Delete configuration item values**
Type	Set
Comment	Overview: • This message can be used to delete saved configuration to effectively revert the item values to defaults. • This message can delete saved configuration from the flash configuration layer and the BBR configuration layer. The changes will not be effective until these layers are loaded into the RAM layer. • This message is limited to containing a maximum of 64 keys up for deletion; i.e. N is a maximum of 64. • This message can be used multiple times and every time the result will be applied immediately. To send this message multiple times with the result being applied at the end, see version 1 of UBX-CFG-VALDEL that supports transactions. • This message does not check if the resulting configuration is valid. • See Receiver configuration for details. This message returns a UBX-ACK-NAK and no configuration is applied: • if any key is unknown to the receiver FW • if the layer's bitfield does not specify a layer to delete a value from. Notes: • If a key is sent multiple times within the same message, the value is effectively deleted only once. • Attempting to delete items that have not been set before, or that have already been deleted, is considered a valid request.

- The provided keys can be complete key values (group and item specifiers) or wild-card specifications. A complete key value constitutes a deletion request for one key-value pair. A key value with a valid group specifier and 0xffff in the item part of the key value (bits 0-15) constitutes a deletion request for all items in the specified group. A key with a value of 0xfff in the group part of the key value (bits 16-27) is a deletion request for all items known to the receiver in all groups.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x06	0x8c	4 + [0..n]·4	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`version`	-	-	Message version (0x00 for this version)
1	X1	`layers`	-	-	The layers where the configuration should be deleted from
bit 1	U:1	`bbr`	-	-	Delete configuration from the BBR layer
bit 2	U:1	`flash`	-	-	Delete configuration from the Flash layer
2	U1[2]	`reserved0`	-	-	Reserved
Start of repeated group (N times)					
4 + n·4	U4	`keys`	-	-	Configuration key IDs of the configuration items to be deleted
End of repeated group (N times)					

3.10.3.2 Delete configuration item values (with transaction)

Message	**UBX-CFG-VALDEL** **Delete configuration item values (with transaction)**
Type	Set
Comment	Overview: • This message can be used to delete saved configuration to effectively revert them to defaults. • This message can delete saved configuration from the flash configuration layer and the BBR configuration layer. The changes will not be effective until these layers are loaded into the RAM layer. • This message is limited to containing a maximum of 64 keys up for deletion; i.e. N is a maximum of 64. • This message can be used multiple times with the result being managed within a transaction. • This message does not check if the resulting configuration is valid. • See Receiver configuration for details. • See version 0 of UBX-CFG-VALDEL for simplified version of this message. This message returns a UBX-ACK-NAK, cancels any started transaction, and no configuration is applied: • if any key within a transaction is unknown to the receiver FW • if an invalid transaction state transition is requested • if the layer's bitfield changes within a transaction • if the layer's bitfield does not specify a layer to delete a value from. Notes: • Any request for another UBX-CFG- message type (including UBX-CFG-VALSET and UBX-CFG-VALGET) will cancel any started transaction, and no configuration is applied. • This message can be sent with no keys to delete for the purposes of managing the transaction state transition. • If a key is sent multiple times within the same message or within the same transaction, the value is effectively deleted only once. • Attempting to delete items that have not been set before, or that have already been deleted, is considered a valid request. • The provided keys can be complete key values (group and item specifiers) or wild-card specifications. A complete key value constitutes a deletion request for one key-value pair. A key value with a valid group specifier and 0xffff in the item part of the key value (bits 0-15) constitutes a deletion request for all items in the specified group. A key with a value of 0xfff in the group part of the key value (bits 16-27) is a deletion request for all items known to the receiver in all groups.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x06	0x8c	4 + [0..n]·4	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`version`	-	-	Message version (0x01 for this version)
1	X1	`layers`	-	-	The layers where the configuration should be deleted from
bit 1	U:1	`bbr`	-	-	Delete configuration from the BBR layer
bit 2	U:1	`flash`	-	-	Delete configuration from the Flash layer
2	X1	`transaction`	-	-	Transaction action to be applied:
bits 1...0	U:2	`action`	-	-	Transaction action to be applied: • 0 = Transactionless UBX-CFG-VALDEL: In the next UBX-CFG-VALDEL, it can be either 0 or 1. If a transaction has not yet been started, the incoming configuration is applied. If a transaction has already been started, cancels any started transaction and the incoming configuration is applied. • 1 = (Re)Start deletion transaction: In the next UBX-CFG-VALDEL, it can be either 0, 1, 2 or 3. If a transaction has not yet been started, a transaction will be started. If a transaction has already been started, restarts the transaction, effectively removing all previous non-applied UBX-CFG-VALDEL messages. • 2 = Deletion transaction ongoing: In the next UBX-CFG-VALDEL, it can be either 0, 1, 2 or 3. • 3 = Apply and end a deletion transaction: In the next UBX-CFG-VALDEL, it can be either 0 or 1.
3	U1	`reserved0`	-	-	Reserved
Start of repeated group (N times)					
4 + n·4	U4	`keys`	-	-	Configuration key IDs of the configuration items to be deleted
End of repeated group (N times)					

3.10.4 UBX-CFG-VALGET (0x06 0x8b)

3.10.4.1 Get configuration items

Message	**UBX-CFG-VALGET** **Get configuration items**
Type	Poll request
Comment	Overview: • This message is used to get configuration values by providing a list of configuration key IDs, which identify the configuration items to retrieve. • This message can specify the configuration layer where the values of the specified configuration items are retrieved from. • This message is limited to containing a maximum of 64 key IDs. • See Receiver configuration for details.

This message returns a UBX-ACK-NAK:

- if any key is unknown to the receiver FW
- if the layer field specifies an invalid layer to get the value from
- if the keys array specifies more than 64 key IDs.

Notes:

- If a value is requested multiple times within the same poll request, then the reply will contain it multiple times.
- The provided keys can be complete key values (group and item specifiers) or wild-card specifications. A complete key value will constitute a request for one key-value pair. A key value that has a valid group specifier and 0xffff in the item part of the key value (bits 0-15) constitutes a request for all items in the specified group. A key with a value of 0xfff in the group part of the key value (bits 16-27) is a request for all items known to the receiver in all groups.
- The response message is limited to containing a maximum of 64 key-value pairs. If there are wild-card specifications then there may be more than 64 possible responses. In order to handle this, the 'position' field can specify that the response message should skip this number of key-value pairs before it starts constructing the message. This allows a large set of values to be retrieved 64 at a time. If the response contains less than 64 key-value pairs then all values have been reported, otherwise there may be more to read.
- It is not possible to retrieve configuration values for the same configuration item from multiple configuration layers. Separate poll requests must be made for each desired layer.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x06	0x8b	4 + [0..n]·4	*see below*	CK_A CK_B

0	U1	`version`	-	-	Message version (0x01 for this version)

1	U1	layer	-	-	The layer from which the configuration item was retrieved: • 0 - RAM layer • 1 - BBR • 2 - Flash • 7 - Default
2	U2	position	-	-	Number of configuration items skipped in the result set before constructing this message (mirrors the equivalent field in the request message)
Start of repeated group (N times)					
4 + n	U1	cfgData	-	-	Configuration data (key and value pairs)
End of repeated group (N times)					

3.10.5 UBX-CFG-VALSET (0x06 0x8a)

3.10.5.1 Set configuration item values

Message	**UBX-CFG-VALSET** **Set configuration item values**
Type	Set
Comment	Overview: • This message is used to set a configuration by providing configuration data (a list of key and value pairs), which identify the configuration items to change, and their new values. • This message is limited to containing a maximum of 64 key-value pairs. • This message can be used multiple times and every time the result will be applied immediately. To send this message multiple times with the result being applied at the end, see version 1 of UBX-CFG-VALSET that supports transactions. • See Receiver configuration for details. This message returns a UBX-ACK-NAK and no configuration is applied: • if any key is unknown to the receiver FW • if the layer's bitfield does not specify a layer to save a value to • if the requested configuration is not valid. The validity of a configuration is checked only if the message requests to apply the configuration to the RAM configuration layer. Notes: • If a key is sent multiple times within the same message, then the value eventually being applied is the last sent.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x06	0x8a	4 + [0..n]	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	version	-	-	Message version (0x00 for this version)
1	X1	layers	-	-	The layers where the configuration should be applied
bit 0	U:1	ram	-	-	Update configuration in the RAM layer
bit 1	U:1	bbr	-	-	Update configuration in the BBR layer
bit 2	U:1	flash	-	-	Update configuration in the Flash layer
2	U1[2]	reserved0	-	-	Reserved
Start of repeated group (N times)					
4 + n	U1	cfgData	-	-	Configuration data (key and value pairs)
End of repeated group (N times)					

3.10.5.2 Set configuration item values (with transaction)

Message	**UBX-CFG-VALSET** **Set configuration item values (with transaction)**
Type	Set
Comment	Overview: • This message is used to set a configuration by providing configuration data (a list of key and value pairs), which identify the configuration items to change, and their new values. • This message is limited to containing a maximum of 64 key-value pairs. • This message can be used multiple times with the result being managed within a transaction. Within a transaction there is no limit on the number key-value pairs; a transaction is effectively limited to the number of known keys. • See Receiver configuration for details. • See version 0 of UBX-CFG-VALSET for simplified version of this message. This message returns a UBX-ACK-NAK, cancels any started transaction, and no configuration is applied: • if any key within a transaction is unknown to the receiver FW • if an invalid transaction state transition is requested • if the layer's bitfield changes within a transaction • if the layer's bitfield does not specify a layer to save a value to This message returns a UBX-ACK-NAK, and no configuration is applied: • if the requested configuration is not valid. While in a transaction context, only the last message that requests to apply the transaction returns a UBX-ACK-NAK. The validity of a configuration is checked only if the message requests to apply the configuration to the RAM configuration layer. This also applies to a transactionless request. Notes: • Any request for another UBX-CFG-message type (including UBX-CFG-VALDEL and UBX-CFG-VALGET) will cancel any started transaction, and no configuration is applied. • This message can be sent with no key/values to set for the purposes of managing the transaction state transition. • If a key is sent multiple times within the same message or within the same transaction, then the value eventually being applied is the last sent.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x06	0x8a	4 + [0..n]	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*

3.12 UBX-MGA (0x13)

The messages in the UBX-MGA class are used for sending GNSS assistance (A-GNSS, aiding) information to the receiver as well as backing up the navigation database from the receiver to a host.

3.12.1 UBX-MGA-ACK (0x13 0x60)

3.12.1.1 Multiple GNSS acknowledge message

Message	**UBX-MGA-ACK-DATA0** **Multiple GNSS acknowledge message**					
Type	Output					
Comment	This message is sent by a u-blox receiver to acknowledge the receipt of an assistance message. Acknowledgments are enabled by setting the CFG-NAVSPG-ACKAIDING item. See section Flow control in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x60	8	*see below*	CK_A CK_B

Payload description:

3.12.3.3 BeiDou health assistance

Message	**UBX-MGA-BDS-HEALTH** **BeiDou health assistance**					
Type	Input					
Comment	This message allows the delivery of BeiDou health assistance from D1/D2 ephemeris to a receiver. See section AssistNow online in the integration manual for details. This message allows the delivery of health assistance data for all satellites with svId 1 to 30.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x03	68	*see below*	CK_A CK_B

12	U1[4]	reserved1	-	-	Reserved

3.12.4 UBX-MGA-DBD (0x13 0x80)

3.12.4.1 Poll the navigation database

Message	**UBX-MGA-DBD** **Poll the navigation database**
Type	Poll request

Comment	Poll the whole navigation data base. The receiver will send all available data from its internal database. The receiver will indicate the finish of the transmission with a UBX-MGA-ACK. The msgPayloadStart field of the UBX-MGA-ACK message will contain a U4 representing the number of UBX-MGA-DBD-DATA* messages sent.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x80	0	*see below*	CK_A CK_B
Payload	This message has no payload.					

3.12.4.2 Navigation database dump entry

Message	**UBX-MGA-DBD** **Navigation database dump entry**					
Type	Input/output					
Comment	Navigation database entry. The data fields are firmware-specific. Transmission of this type of message will be acknowledged by UBX-MGA-ACK messages, if acknowledgment has been enabled. See section AssistNow online in the integration manual for details. The maximum payload size for firmware 2.01 onwards is 164 bytes (which makes the maximum message size 172 bytes). ☞ UBX-MGA-DBD messages are only intended to be sent back to the same receiver that generated them.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x80	12 + [0..n]	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1[12]	`reserved0`	-	-	Reserved
Start of repeated group (N times)					
12 + n	U1	`data`	-	-	firmware-specific data
End of repeated group (N times)					

3.12.5 UBX-MGA-FLASH (0x13 0x21)

3.12.5.1 Transfer MGA-ANO data block to flash

Message	**UBX-MGA-FLASH-DATA** **Transfer MGA-ANO data block to flash**					
Type	Input					
Comment	This message is used to transfer a block of MGA-ANO data from host to the receiver. Upon reception of this message, the receiver will write the payload data to its internal non-volatile memory (flash). Also, on reception of the first MGA-FLASH-DATA message, the receiver will erase the flash allocated to storing any existing MGA-ANO data. The payload can be up to 512 bytes. Payloads larger than this would exceed the receiver's internal buffering capabilities. The receiver will ACK/NACK this message using the message alternatives given below. The host shall wait for an acknowledge message before sending the next data block. See Flash-based AssistNow Offline for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x21	6 + size	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x01 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U2	`sequence`	-	-	Message sequence number, starting at 0 and increamenting by 1 for each MGA-FLASH-DATA message sent.

4	U2	size	-	-	Payload size in bytes.
Start of repeated group (size times)					
6 + n	U1	data	-	-	Payload data.
End of repeated group (size times)					

3.12.5.2 Finish flashing MGA-ANO data

Message	**UBX-MGA-FLASH-STOP** **Finish flashing MGA-ANO data**					
Type	Input					
Comment	This message is used to tell the receiver that there are no more MGA-FLASH type 1 messages coming, and that it can do any final internal operations needed to commit the data to flash as a background activity. A UBX-MGA-ACK message will be sent at the end of this process. Note that there may be a delay of several seconds before the UBX-MGA-ACK for this message is sent because of the time taken for this processing. See Flash-based AssistNow Offline for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x21	2	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	type	-	-	Message type (0x02 for this type)
1	U1	version	-	-	Message version (0x00 for this version)

3.12.5.3 Acknowledge last FLASH-DATA or -STOP

Message	**UBX-MGA-FLASH-ACK** **Acknowledge last FLASH-DATA or -STOP**					
Type	Output					
Comment	This message reports an ACK/NACK to the host for the last MGA-FLASH type 1 or type 2 message message received. See Flash-based AssistNow Offline for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x21	6	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	type	-	-	Message type (0x03 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	ack	-	-	Acknowledgment type. 0 - ACK: Message received and written to flash. 1 - NACK: Problem with last message, re-transmission required (this only happens while acknowledging a UBX-MGA_FLASH_DATA message). 2 - NACK: problem with last message, give up.
3	U1	reserved0	-	-	Reserved
4	U2	sequence	-	-	If acknowledging a UBX-MGA-FLASH-DATA message this is the Message sequence number being ack'ed. If acknowledging a UBX-MGA-FLASH-STOP message it will be set to 0xffff.

3.12.6 UBX-MGA-GAL (0x13 0x02)

3.12.6.1 Galileo ephemeris assistance

Message	**UBX-MGA-GAL-EPH** **Galileo ephemeris assistance**					
Type	Input					
Comment	This message allows the delivery of Galileo ephemeris assistance to a receiver. See section AssistNow online in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x02	76	*see below*	CK_A CK_B

3	U1	svHealth	-	-	SV health information
4	U2	e	2^-21	-	Eccentricity
6	U1	almWNa	-	week	Reference week number of almanac (the 8-bit WNa field)
7	U1	toa	2^12	s	Reference time of almanac
8	I2	deltaI	2^-19	semi-circles	Delta inclination angle at reference time
10	I2	omegaDot	2^-38	semi-circles/s	Rate of right ascension
12	U4	sqrtA	2^-11	m^0.5	Square root of the semi-major axis
16	I4	omega0	2^-23	semi-circles	Longitude of ascending node of orbit plane
20	I4	omega	2^-23	semi-circles	Argument of perigee
24	I4	m0	2^-23	semi-circles	Mean anomaly at reference time
28	I2	af0	2^-20	s	Time polynomial coefficient 0 (8 MSBs)
30	I2	af1	2^-38	s/s	Time polynomial coefficient 1
32	U1[4]	reserved0	-	-	Reserved

3.12.7.3 GPS health assistance

Message	**UBX-MGA-GPS-HEALTH** **GPS health assistance**					
Type	Input					
Comment	This message allows the delivery of GPS health assistance to a receiver. See section AssistNow online in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x00	40	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x04 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U1[2]	`reserved0`	-	-	Reserved
4	U1[32]	`healthCode`	-	-	Each byte represents a GPS SV (1-32). The 6 LSBs of each byte contains the 6 bit health code from subframes 4/5 page 25.
36	U1[4]	`reserved1`	-	-	Reserved

3.12.7.4 GPS UTC assistance

Message	**UBX-MGA-GPS-UTC** **GPS UTC assistance**					
Type	Input					
Comment	This message allows the delivery of GPS UTC assistance to a receiver. See section AssistNow online in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x00	20	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x05 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U1[2]	`reserved0`	-	-	Reserved
4	I4	`utcA0`	2^-30	s	First parameter of UTC polynomial
8	I4	`utcA1`	2^-50	s/s	Second parameter of UTC polynomial
12	I1	`utcDtLS`	-	s	Delta time due to current leap seconds
13	U1	`utcTot`	2^12	s	UTC parameters reference time of week (GPS time)
14	U1	`utcWNt`	-	weeks	UTC parameters reference week number (the 8-bit WNt field)
15	U1	`utcWNlsf`	-	weeks	Week number at the end of which the future leap second becomes effective (the 8-bit WNLSF field)
16	U1	`utcDn`	-	days	Day number at the end of which the future leap second becomes effective
17	I1	`utcDtLSF`	-	s	Delta time due to future leap seconds
18	U1[2]	`reserved1`	-	-	Reserved

3.12.7.5 GPS ionosphere assistance

Message	**UBX-MGA-GPS-IONO** **GPS ionosphere assistance**					
Type	Input					
Comment	This message allows the delivery of GPS ionospheric assistance to a receiver. See section AssistNow online in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x00	16	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x06 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U1[2]	`reserved0`	-	-	Reserved
4	I1	`ionoAlpha0`	2^-30	s	Ionospheric parameter alpha0 [s]
5	I1	`ionoAlpha1`	2^-27	s/semi-circle	Ionospheric parameter alpha1 [s/semi-circle]
6	I1	`ionoAlpha2`	2^-24	s/(semi-circle^2)	Ionospheric parameter alpha2 [s/semi-circle^2]
7	I1	`ionoAlpha3`	2^-24	s/(semi-circle^3)	Ionospheric parameter alpha3 [s/semi-circle^3]
8	I1	`ionoBeta0`	2^11	s	Ionospheric parameter beta0 [s]
9	I1	`ionoBeta1`	2^14	s/semi-circle	Ionospheric parameter beta1 [s/semi-circle]
10	I1	`ionoBeta2`	2^16	s/(semi-circle^2)	Ionospheric parameter beta2 [s/semi-circle^2]
11	I1	`ionoBeta3`	2^16	s/(semi-circle^3)	Ionospheric parameter beta3 [s/semi-circle^3]
12	U1[4]	`reserved1`	-	-	Reserved

3.12.8 UBX-MGA-INI (0x13 0x40)

3.12.8.1 Initial position assistance

Message	**UBX-MGA-INI-POS_XYZ** **Initial position assistance**					
Type	Input					
Comment	This message allows the delivery of initial position assistance to a receiver in cartesian ECEF coordinates. This message is equivalent to the UBX-MGA-INI-POS_LLH message, except for the coordinate system. See section AssistNow Online in the integration manual for details. ☞ Supplying position assistance that is inaccurate by more than the specified position accuracy, may lead to substantially degraded receiver performance.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x40	20	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x00 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U1[2]	`reserved0`	-	-	Reserved

4	I4	ecefX	-	cm	WGS84 ECEF X coordinate
8	I4	ecefY	-	cm	WGS84 ECEF Y coordinate
12	I4	ecefZ	-	cm	WGS84 ECEF Z coordinate
16	U4	posAcc	-	cm	Position accuracy (stddev)

3.12.8.2 Initial position assistance

Message	**UBX-MGA-INI-POS_LLH** **Initial position assistance**
Type	Input
Comment	This message allows the delivery of initial position assistance to a receiver in WGS84 lat/long/alt coordinates. This message is equivalent to the UBX-MGA-INI-POS_XYZ message, except for the coordinate system. See section AssistNow online in the integration manual for details. ☞ Supplying position assistance that is inaccurate by more than the specified position accuracy, may lead to substantially degraded receiver performance.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x40	20	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	type	-	-	Message type (0x01 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	Reserved
4	I4	lat	1e-7	deg	WGS84 Latitude
8	I4	lon	1e-7	deg	WGS84 Longitude
12	I4	alt	-	cm	WGS84 Altitude
16	U4	posAcc	-	cm	Position accuracy (stddev)

3.12.8.3 Initial time assistance

Message	**UBX-MGA-INI-TIME_UTC** **Initial time assistance**
Type	Input
Comment	This message allows the delivery of UTC time assistance to a receiver. This message is equivalent to the UBX-MGA-INI-TIME_GNSS message, except for the time base. See section AssistNow online in the integration manual for details. ☞ Supplying time assistance that is inaccurate by more than the specified time accuracy, may lead to substantially degraded receiver performance.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x40	24	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	type	-	-	Message type (0x10 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	X1	ref	-	-	Reference to be used to set time
bits 3...0	U:4	source	-	-	• 0 = none, i.e. on receipt of message (will be inaccurate!) • 1 = relative to pulse sent to EXTINT0 • 2 = relative to pulse sent to EXTINT1

					• 3-15 = reserved
bit 4	U:1	fall	-	-	use falling edge of EXTINT pulse (default rising) - only if source is EXTINT
bit 5	U:1	last	-	-	use last EXTINT pulse (default next pulse) - only if source is EXTINT
3	I1	leapSecs	-	s	Number of leap seconds since 1980 (or 0x80 = -128 if unknown)
4	U2	year	-	-	Year
6	U1	month	-	-	Month, starting at 1
7	U1	day	-	-	Day, starting at 1
8	U1	hour	-	-	Hour, from 0 to 23
9	U1	minute	-	-	Minute, from 0 to 59
10	U1	second	-	s	Seconds, from 0 to 59
11	X1	bitfield0	-	-	bitfield:
bit 0	U:1	trustedSource	-	-	Time is provided from a trusted source. Potentially usable for replay attack detection • 0: Unknown • 1: Time source can be trusted for spoofing detection
12	U4	ns	-	ns	Nanoseconds, from 0 to 999,999,999
16	U2	tAccS	-	s	Seconds part of time accuracy
18	U1[2]	reserved0	-	-	Reserved
20	U4	tAccNs	-	ns	Nanoseconds part of time accuracy, from 0 to 999,999,999

3.12.8.4 Initial time assistance

Message	**UBX-MGA-INI-TIME_GNSS** **Initial time assistance**					
Type	Input					
Comment	This message allows the delivery of time assistance to a receiver in a chosen GNSS timebase. This message is equivalent to the UBX-MGA-INI-TIME_UTC message, except for the time base. See section AssistNow online in the integration manual for details. ☞ Supplying time assistance that is inaccurate by more than the specified time accuracy, may lead to substantially degraded receiver performance.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x40	24	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	type	-	-	Message type (0x11 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	X1	ref	-	-	Reference to be used to set time
bits 3...0	U:4	source	-	-	• 0 = none, i.e. on receipt of message (will be inaccurate!) • 1 = relative to pulse sent to EXTINT0 • 2 = relative to pulse sent to EXTINT1 • 3-15 = reserved

bit 4	U:1	fall	-	-	use falling edge of EXTINT pulse (default rising) - only if source is EXTINT
bit 5	U:1	last	-	-	use last EXTINT pulse (default next pulse) - only if source is EXTINT
3	U1	gnssId	-	-	Source of time information. Currently supported: • 0 = GPS time • 2 = Galileo time • 3 = BeiDou time • 6 = GLONASS time • 7 = NavIC time
4	X1	bitfield0	-	-	bitfield:
bit 0	U:1	trustedSource	-	-	Time is provided from a trusted source. Potentially usable for replay attack detection • 0: Unknown • 1: Time source can be trusted for spoofing detection
5	U1	reserved0	-	-	Reserved
6	U2	week	-	-	GNSS week number
8	U4	tow	-	s	GNSS time of week
12	U4	ns	-	ns	GNSS time of week, nanosecond part from 0 to 999,999,999
16	U2	tAccS	-	s	Seconds part of time accuracy
18	U1[2]	reserved1	-	-	Reserved
20	U4	tAccNs	-	ns	Nanoseconds part of time accuracy, from 0 to 999,999,999

3.12.8.5 Initial clock drift assistance

Message	**UBX-MGA-INI-CLKD** **Initial clock drift assistance**					
Type	Input					
Comment	This message allows the delivery of clock drift assistance to a receiver. See section AssistNow online in the integration manual for details. ☞ Supplying clock drift assistance that is inaccurate by more than the specified accuracy, may lead to substantially degraded receiver performance.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x40	12	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	type	-	-	Message type (0x20 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1[2]	reserved0	-	-	Reserved
4	I4	clkD	-	ns/s	Clock drift
8	U4	clkDAcc	-	ns/s	Clock drift accuracy

3.12.8.6 Initial frequency assistance

Message	**UBX-MGA-INI-FREQ** **Initial frequency assistance**
Type	Input
Comment	This message allows the delivery of external frequency assistance to a receiver. See section AssistNow online in the integration manual for details. ☞ Supplying external frequency assistance that is inaccurate by more than the specified accuracy, may lead to substantially degraded receiver performance.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x40	12	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x21 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U1	`reserved0`	-	-	Reserved
3	X1	`flags`	-	-	Frequency reference
bits 3...0	$U_{:4}$	`source`	-	-	• 0 = frequency available on EXTINT0 • 1 = frequency available on EXTINT1 • 2-15 = reserved
bit 4	$U_{:1}$	`fall`	-	-	use falling edge of EXTINT pulse (default rising)
4	I4	`freq`	1e-2	Hz	Frequency
8	U4	`freqAcc`	-	ppb	Frequency accuracy

3.12.8.7 Earth orientation parameters assistance

Message	**UBX-MGA-INI-EOP** **Earth orientation parameters assistance**
Type	Input
Comment	This message allows the delivery of new earth orientation parameters (EOP) to a receiver to improve AssistNow Autonomous operation.

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x40	72	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x30 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U1[2]	`reserved0`	-	-	Reserved
4	U2	`d2kRef`	-	d	reference time (days since 1.1.2000 12.00h UTC)
6	U2	`d2kMax`	-	d	expiration time (days since 1.1.2000 12.00h UTC)
8	I4	`xpP0`	2^-30	arcsec	x_p t^0 polynomial term (offset)
12	I4	`xpP1`	2^-30	arcsec/d	x_p t^1 polynomial term (drift)
16	I4	`ypP0`	2^-30	arcsec	y_p t^0 polynomial term (offset)
20	I4	`ypP1`	2^-30	arcsec/d	y_p t^1 polynomial term (drift)
24	I4	`dUT1`	2^-25	s	dUT1 t^0 polynomial term (offset)
28	I4	`ddUT1`	2^-30	s/d	dUT1 t^1 polynomial term (drift)

32	U1[40]	reserved1	-	-	Reserved

3.12.9 UBX-MGA-QZSS (0x13 0x05)

3.12.9.1 QZSS ephemeris assistance

Message	**UBX-MGA-QZSS-EPH** **QZSS ephemeris assistance**					
Type	Input					
Comment	This message allows the delivery of QZSS ephemeris assistance to a receiver. See section AssistNow Online in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x05	68	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	type	-	-	Message type (0x01 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	svId	-	-	QZSS Satellite identifier (see Satellite Numbering), Range 1-5
3	U1	reserved0	-	-	Reserved
4	U1	fitInterval	-	-	Fit interval flag
5	U1	uraIndex	-	-	URA index
6	U1	svHealth	-	-	SV health
7	I1	tgd	2^-31	s	Group delay differential
8	U2	iodc	-	-	IODC
10	U2	toc	2^4	s	Clock data reference time
12	U1	reserved1	-	-	Reserved
13	I1	af2	2^-55	s/s squared	Time polynomial coefficient 2
14	I2	af1	2^-43	s/s	Time polynomial coefficient 1
16	I4	af0	2^-31	s	Time polynomial coefficient 0
20	I2	crs	2^-5	m	Crs
22	I2	deltaN	2^-43	semi-circles/s	Mean motion difference from computed value
24	I4	m0	2^-31	semi-circles	Mean anomaly at reference time
28	I2	cuc	2^-29	radians	Amp of cosine harmonic corr term to arg of lat
30	I2	cus	2^-29	radians	Amp of sine harmonic corr term to arg of lat
32	U4	e	2^-33	-	eccentricity
36	U4	sqrtA	2^-19	m^0.5	Square root of the semi-major axis A
40	U2	toe	2^4	s	Reference time of ephemeris
42	I2	cic	2^-29	radians	Amp of cos harmonic corr term to angle of inclination
44	I4	omega0	2^-31	semi-circles	Long of asc node of orbit plane at weekly epoch
48	I2	cis	2^-29	radians	Amp of sine harmonic corr term to angle of inclination
50	I2	crc	2^-5	m	Amp of cosine harmonic corr term to orbit radius

52	I4	i0	2^-31	semi-circles	Inclination angle at reference time
56	I4	omega	2^-31	semi-circles	Argument of perigee
60	I4	omegaDot	2^-43	semi-circles/s	Rate of right ascension
64	I2	idot	2^-43	semi-circles/s	Rate of inclination angle
66	U1[2]	reserved2	-	-	Reserved

3.12.9.2 QZSS almanac assistance

Message	**UBX-MGA-QZSS-ALM** **QZSS almanac assistance**					
Type	Input					
Comment	This message allows the delivery of QZSS almanac assistance to a receiver. See section AssistNow Online in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x05	36	*see below*	CK_A CK_B

Payload description:

0	U1	type	-	-	Message type (0x02 for this type)
1	U1	version	-	-	Message version (0x00 for this version)
2	U1	svId	-	-	QZSS Satellite identifier (see Satellite Numbering), Range 1-5
3	U1	svHealth	-	-	Almanac SV health information
4	U2	e	2^-21	-	Almanac eccentricity
6	U1	almWNa	-	week	Reference week number of almanac (the 8-bit WNa field)
7	U1	toa	2^12	s	Reference time of almanac
8	I2	deltaI	2^-19	semi-circles	Delta inclination angle at reference time
10	I2	omegaDot	2^-38	semi-circles/s	Almanac rate of right ascension
12	U4	sqrtA	2^-11	m^0.5	Almanac square root of the semi-major axis A
16	I4	omega0	2^-23	semi-circles	Almanac long of asc node of orbit plane at weekly
20	I4	omega	2^-23	semi-circles	Almanac argument of perigee
24	I4	m0	2^-23	semi-circles	Almanac mean anomaly at reference time
28	I2	af0	2^-20	s	Almanac time polynomial coefficient 0 (8 MSBs)
30	I2	af1	2^-38	s/s	Almanac time polynomial coefficient 1
32	U1[4]	reserved0	-	-	Reserved

3.12.9.3 QZSS health assistance

Message	**UBX-MGA-QZSS-HEALTH** **QZSS health assistance**
Type	Input

Comment	This message allows the delivery of QZSS health assistance to a receiver. See section AssistNow Online in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x13	0x05	12	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`type`	-	-	Message type (0x04 for this type)
1	U1	`version`	-	-	Message version (0x00 for this version)
2	U1[2]	`reserved0`	-	-	Reserved
4	U1[5]	`healthCode`	-	-	Each byte represents a QZSS SV (1-5). The 6 LSBs of each byte contains the 6 bit health code from subframes 4/5, data ID = 3, SV ID = 51
9	U1[3]	`reserved1`	-	-	Reserved

3.13 UBX-MON (0x0a)

The messages in the UBX-MON class are used to report the receiver status, such as hardware status or I/O subsystem statistics.

3.13.1 UBX-MON-COMMS (0x0a 0x36)

3.13.1.1 Communication port information

Message	**UBX-MON-COMMS** **Communication port information**					
Type	Periodic/polled					
Comment	Consolidated communications information for all ports. The size of the message is determined by the number of ports that are in use on the receiver. A port is only included if communication, either send or receive, has been initiated on that port.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x0a	0x36	8 + nPorts·40	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`version`	-	-	Message version (0x00 for this version)
1	U1	`nPorts`	-	-	Number of ports included
2	X1	`txErrors`	-	-	TX error bitmask
bit 0	U:1	`mem`	-	-	Memory Allocation error
bit 1	U:1	`alloc`	-	-	Allocation error (TX buffer full)
bits 4...2	U:3	`outputPort`	-	-	Output port: Reports the port from which this message was output from. • 0 = N/A • 1 = I2C • 2 = UART1 • 3 = UART2 • 4 = USB • 5 = SPI
3	U1	`reserved0`	-	-	Reserved

4	U1[4]	protIds	-		The identifiers of the protocols reported in the msgs array. 0: UBX, 1: NMEA, 2: RTCM2, 5: RTCM3, 6: SPARTN, 0xFF: No protocol reported.
Start of repeated group (nPorts times)					
8 + n·40	U2	portId	-	-	Unique identifier for the port. See section Communications ports in the integration manual for details.
10 + n·40	U2	txPending	-	bytes	Number of bytes pending in transmitter buffer
12 + n·40	U4	txBytes	-	bytes	Number of bytes ever sent
16 + n·40	U1	txUsage	-	%	Maximum usage transmitter buffer during the last sysmon period
17 + n·40	U1	txPeakUsage	-	%	Maximum usage transmitter buffer
18 + n·40	U2	rxPending	-	bytes	Number of bytes in receiver buffer
20 + n·40	U4	rxBytes	-	bytes	Number of bytes ever received
24 + n·40	U1	rxUsage	-	%	Maximum usage receiver buffer during the last sysmon period
25 + n·40	U1	rxPeakUsage	-	%	Maximum usage receiver buffer
26 + n·40	U2	overrunErrs	-	-	Number of 100 ms timeslots with overrun errors
28 + n·40	U2[4]	msgs	-	msg	Number of successfully parsed messages for each protocol. The reported protocols are identified through the protIds field.
36 + n·40	U1[8]	reserved1	-	-	Reserved
44 + n·40	U4	skipped	-	bytes	Number of skipped bytes
End of repeated group (nPorts times)					

3.13.2 UBX-MON-GNSS (0x0a 0x28)

3.13.2.1 Information message major GNSS selection

Message	**UBX-MON-GNSS** **Information message major GNSS selection**					
Type	Polled					
Comment	This message reports major GNSS selection. It does this by means of bit masks in U1 fields. Each bit in a bit mask corresponds to one major GNSS. Augmentation systems are not reported.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x0a	0x28	8	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	version	-	-	Message version (0x00 for this version)
1	X1	supported	-	-	A bit mask showing the major GNSS that can be supported by this receiver
bit 0	U:1	GPSSup	-	-	GPS is supported
bit 1	U:1	GlonassSup	-	-	GLONASS is supported
bit 2	U:1	BeidouSup	-	-	BeiDou is supported
bit 3	U:1	GalileoSup	-	-	Galileo is supported

2		X1	defaultGnss	-	-	A bit mask showing the default major GNSS selection. If the default major GNSS selection is currently configured in the OTP memory for this receiver, it takes precedence over the default major GNSS selection configured in the executing firmware of this receiver.
	bit 0	U:1	GPSDef	-	-	GPS is default-enabled
	bit 1	U:1	GlonassDef	-	-	GLONASS is default-enabled
	bit 2	U:1	BeidouDef	-	-	BeiDou is default-enabled
	bit 3	U:1	GalileoDef	-	-	Galileo is default-enabled
3		X1	enabled	-	-	A bit mask showing the current major GNSS selection enabled for this receiver
	bit 0	U:1	GPSEna	-	-	GPS is enabled
	bit 1	U:1	GlonassEna	-	-	GLONASS is enabled
	bit 2	U:1	BeidouEna	-	-	BeiDou is enabled
	bit 3	U:1	GalileoEna	-	-	Galileo is enabled
4		U1	simultaneous	-	-	Maximum number of concurrent major GNSS that can be supported by this receiver
5		U1[3]	reserved0	-	-	Reserved

3.13.3 UBX-MON-HW3 (0x0a 0x37)

3.13.3.1 I/O pin status

Message	**UBX-MON-HW3** **I/O pin status**					
Type	Periodic/polled					
Comment	This message contains information specific to each HW I/O pin, for example whether the pin is set as Input or Output. For the antenna supervisor status and other RF status information, see the UBX-MON-RF message.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x0a	0x37	22 + nPins·6	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	version	-	-	Message version (0x00 for this version)
1	U1	nPins	-	-	The number of I/O pins included
2	X1	flags	-	-	Flags
bit 0	U:1	rtcCalib	-	-	RTC is calibrated
bit 1	U:1	safeBoot	-	-	Safeboot mode (0 = inactive, 1 = active)
bit 2	U:1	xtalAbsent	-	-	RTC xtal has been determined to be absent
3	CH[10]	hwVersion	-	-	Zero-terminated hardware version string (same as that returned in the UBX-MON-VER message)
13	U1[9]	reserved0	-	-	Reserved
Start of repeated group (nPins times)					

22 + n·6	U1	reserved1	-	-	Reserved
23 + n·6	U1	pinId	-	-	Identifier for the pin, including both external and internal pins
24 + n·6	X2	pinMask	-	-	Pin mask
bit 0	U:1	periphPIO	-	-	Pin is set to peripheral or PIO? 0=Peripheral 1=PIO
bits 3...1	U:3	pinBank	-	-	Bank the pin belongs to, where 0=A 1=B 2=C 3=D 4=E 5=F 6=G 7=H
bit 4	U:1	direction	-	-	Pin direction? 0=Input 1=Output
bit 5	U:1	value	-	-	Pin value? 0=Low 1=High
bit 6	U:1	vpManager	-	-	Used by virtual pin manager? 0=No 1=Yes
bit 7	U:1	pioIrq	-	-	Interrupt enabled? 0=No 1=Yes
bit 8	U:1	pioPullHigh	-	-	Using pull high resistor? 0=No 1=Yes
bit 9	U:1	pioPullLow	-	-	Using pull low resistor 0=No 1=Yes
26 + n·6	U1	VP	-	-	Virtual pin mapping
27 + n·6	U1	reserved2	-	-	Reserved
End of repeated group (nPins times)					

3.13.4 UBX-MON-PATCH (0x0a 0x27)

3.13.4.1 Installed patches

Message	**UBX-MON-PATCH** **Installed patches**					
Type	Polled					
Comment	This message reports information about patches installed and currently enabled on the receiver. It does not report on patches installed and then disabled. An enabled patch is considered active when the receiver executes from the code space where the patch resides on. For example, a ROM patch is reported active only when the system runs from ROM.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x0a	0x27	4 + nEntries·16	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U2	version	-	-	Message version (0x0001 for this version)
2	U2	nEntries	-	-	Total number of reported patches
Start of repeated group (nEntries times)					
4 + n·16	X4	patchInfo	-	-	Status information about the reported patch
bit 0	U:1	activated	-	-	1: the patch is active, 0: otherwise
bits 2...1	U:2	location	-	-	Indicates where the patch is stored. 0: OTP, 1: ROM, 2: BBR, 3: file system
8 + n·16	U4	comparator Number	-	-	The number of the comparator
12 + n·16	U4	patchAddress	-	-	The address that is targeted by the patch
16 + n·16	U4	patchData	-	-	The data that is inserted at the patchAddress

End of repeated group (`nEntries` times)

3.13.5 UBX-MON-RCVRSTAT (0x0a 0x40)

3.13.5.1 Status of the configurable receiver features

Message	**UBX-MON-RCVRSTAT** **Status of the configurable receiver features**
Type	Polled
Comment	Status of the configurable receiver features, e.g. enabled signals. The current configuration of the receiver is visible on the RAM layer. This message shows the current configuration values and the source of the data. The source is one of the following: • 0 = RAM (run-time settings) • 1 = BBR (settings restored from the BBR or set at run-time) • 2 = FLASH (settings restored from the Flash or set at run-time) • 3-6 = Default (firmware default setting) • 7 = Setting is not supported in this firmware version The bits indicating enabling of a feature mean: • 0 = Disabled • 1 = Enabled

Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

3.13.6 UBX-MON-RF (0x0a 0x38)

3.13.6.1 RF information

Message	**UBX-MON-RF** **RF information**
Type	Periodic/polled
Comment	Information for each RF block. There are as many RF blocks reported as bands supported by this receiver.

Message structure	Header	Class	ID	Length (Bytes)	Payload	Checksum
	0xb5 0x62	0x0a	0x38	4 + nBlocks·24	*see below*	CK_A CK_B

Payload description:

Byte offset	Type	Name	Scale	Unit	Description
0	U1	`version`	-	-	Message version (0x00 for this version)
1	U1	`nBlocks`	-	-	The number of RF blocks included
2	U1[2]	`reserved0`	-	-	Reserved
Start of repeated group (`nBlocks` times)					
4 + n·24	U1	`blockId`	-	-	RF block ID (0 = L1 band, 1 = L2 or L5 band depending on product configuration)
5 + n·24	X1	`flags`	-	-	Flags
bits 1...0	U:2	`jammingState`	-	-	Output from jamming/interference monitor (0 = unknown or feature disabled or flag unavailable, 1 = ok - no significant jamming, 2 = warning - interference visible but fix OK, 3 = critical - interference visible and no fix). This flag is deprecated in protocol versions that support UBX-SEC-SIG (version 0x02) and always reported as 0; instead jammingState in UBX-SEC-SIG should be monitored.
6 + n·24	U1	`antStatus`	-	-	Status of the antenna supervisor state machine (0x00=INIT, 0x01=DONTKNOW, 0x02=OK, 0x03=SHORT, 0x04=OPEN)
7 + n·24	U1	`antPower`	-	-	Current power status of antenna (0x00=OFF, 0x01=ON, 0x02=DONTKNOW)
8 + n·24	U4	`postStatus`	-	-	POST status word
12 + n·24	U1[4]	`reserved1`	-	-	Reserved
16 + n·24	U2	`noisePerMS`	-	-	Noise level as measured by the GPS core
18 + n·24	U2	`agcCnt`	-	-	AGC Monitor, as percentage of maximum gain, range 0 to 8191 (100%)
20 + n·24	U1	`cwSuppression`	-	-	CW interference suppression level, scaled (0=no CW jamming, 255 = strong CW jamming)
21 + n·24	I1	`ofsI`	-	-	Imbalance of I-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)
22 + n·24	U1	`magI`	-	-	Magnitude of I-part of complex signal, scaled (0 = no signal, 255 = max.magnitude)
23 + n·24	I1	`ofsQ`	-	-	Imbalance of Q-part of complex signal, scaled (-128 = max. negative imbalance, 127 = max. positive imbalance)
24 + n·24	U1	`magQ`	-	-	Magnitude of Q-part of complex signal, scaled (0 = no signal, 255 = max.magnitude)
25 + n·24	U1[3]	`reserved2`	-	-	Reserved
End of repeated group (`nBlocks` times)					

3.13.7 UBX-MON-RXR (0x0a 0x21)

3.13.7.1 Receiver status information

Message	**UBX-MON-RXR** **Receiver status information**					
Type	Output					
Comment	The receiver ready message is sent when the receiver changes from or to backup mode.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	X1	`flags`	-	-	Receiver status flags
bit 0	$U_{:1}$	`awake`	-	-	not in backup mode

3.13.8 UBX-MON-SPAN (0x0a 0x31)

3.13.8.1 Signal characteristics

Message	**UBX-MON-SPAN** **Signal characteristics**					
Type	Periodic/polled					
Comment	This message is to be used as a basic spectrum analyzer, where it displays one spectrum for each of the receiver's existing RF paths. The spectrum is conveyed with the following parameters: The frequency span in Hz, the frequency bin resolution in Hz, the center frequency in Hz, and 256 bins with amplitude data. Additionally, in order to give further insight on the signal captured by the receiver, the current gain of the internal programmable gain amplifier (PGA) is provided. **This message gives information for comparative analysis rather than absolute and precise spectrum overview. Users should not expect highly accurate spectrum amplitude.** Note that the PGA gain is not included in the spectrum data but is available as a separate field. Neither the spectrum, nor the PGA gain considers the internal fixed LNA gain or an external third-party LNA. The center frequency at each bin, assuming a zero-based bin count, can be computed as *f(i) = center + span * (i - 127) / 256*

30	CH[10]	`hwVersion`	-	-	Nul-terminated hardware version string
Start of repeated group (N times)					
40 + n·30	CH[30]	`extension`	-	-	Extended software information strings. A series of nul-terminated strings. Each extension field is 30 characters long and contains varying software information. Not all extension fields may appear. Examples of reported information: the software version string of the underlying ROM (when the receiver's firmware is running from flash), the firmware version, the supported protocol version, the module identifier, the flash information structure (FIS) file information, the supported major GNSS, the supported augmentation systems. See Firmware and protocol versions for details.
End of repeated group (N times)					

3.14 UBX-NAV (0x01)

The messages in the UBX-NAV class are used to output navigation results and data, such as position, altitude and velocity in a number of formats, and status flags and accuracy estimate figures, or satellite and signal information. The messages are generated with the configured navigation rate.

3.14.1 UBX-NAV-AOPSTATUS (0x01 0x60)

3.14.1.1 AssistNow Autonomous status

Message	**UBX-NAV-AOPSTATUS** **AssistNow Autonomous status**					
Type	Periodic/polled					
Comment	This message provides information on the status of the *AssistNow Autonomous* subsystem on the receiver. For example, a host application can determine the optimal time to shut down the receiver by monitoring the `status` field for a steady 0. See the integration manual for details on this feature.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

3.14.3 UBX-NAV-COV (0x01 0x36)

3.14.3.1 Covariance matrices

Message	**UBX-NAV-COV** **Covariance matrices**
Type	Periodic/polled

Comment	This message outputs the covariance matrices for the position and velocity solutions in the topocentric coordinate system defined as the local-level North (N), East (E), Down (D) frame. As the covariance matrices are symmetric, only the upper triangular part is output.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

3.14.4 UBX-NAV-DOP (0x01 0x04)

3.14.4.1 Dilution of precision

Message	**UBX-NAV-DOP** **Dilution of precision**					
Type	Periodic/polled					
Comment	• DOP values are dimensionless. • All DOP values are scaled by a factor of 100. If the unit transmits a value of e.g. 156, the DOP value is 1.56.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.

3.14.6 UBX-NAV-ODO (0x01 0x09)

3.14.6.1 Odometer solution

Message	**UBX-NAV-ODO** **Odometer solution**					
Type	Periodic/polled					
Comment	This message outputs the traveled distance since last reset (see UBX-NAV-RESETODO) together with an associated estimated accuracy and the total cumulated ground distance (can only be reset by a cold start of the receiver).					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

3.14.8 UBX-NAV-PL (0x01 0x62)

3.14.8.1 Protection level information

Message	**UBX-NAV-PL** **Protection level information**					
Type	Periodic					
Comment	This message provides protection level (PL) values per protection level state (e.g. position ECEF X/Y/Z) and w.r.t. the given target misleading information risk (TMIR) per coordinate axis. Target misleading information risk is expressed as X [%MI/epoch] (read: X% probability of having an MI per epoch). Misleading information (MI) occurs when the Protection Level value is smaller than the true position error.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01	0x62	52	*see below*	CK_A CK_B

56	I4	velD	-	mm/s	NED down velocity
60	I4	gSpeed	-	mm/s	Ground Speed (2-D)
64	I4	headMot	1e-5	deg	Heading of motion (2-D)
68	U4	sAcc	-	mm/s	Speed accuracy estimate
72	U4	headAcc	1e-5	deg	Heading accuracy estimate (both motion and vehicle)
76	U2	pDOP	0.01	-	Position DOP
78	X2	flags3	-	-	Additional flags
bit 0	U:1	invalidLlh	-	-	1 = Invalid lon, lat, height and hMSL (applicable to heading products only)
bits 4...1	U:4	lastCorrectionAge	-	-	Age of the most recently received differential correction: • 0 = Not available • 1 = Age between 0 and 1 second • 2 = Age between 1 (inclusive) and 2 seconds • 3 = Age between 2 (inclusive) and 5 seconds • 4 = Age between 5 (inclusive) and 10 seconds • 5 = Age between 10 (inclusive) and 15 seconds • 6 = Age between 15 (inclusive) and 20 seconds • 7 = Age between 20 (inclusive) and 30 seconds • 8 = Age between 30 (inclusive) and 45 seconds • 9 = Age between 45 (inclusive) and 60 seconds • 10 = Age between 60 (inclusive) and 90 seconds • 11 = Age between 90 (inclusive) and 120 seconds • >=12 = Age greater or equal than 120 seconds
bit 13	U:1	authTime	-	-	Flag that indicates if the output time has been validated against an external trusted time source • 0 = Time is not authenticated • 1 = Time is authenticated
bit 14	U:1	nmaFixStatus	-	-	Flag assigned to a fix that has been computed mixing satellites with data authenticated through Navigation Message Authentication (NMA) methods and satellites using unauthenticated data. The fix is flagged as Verified when internal cross-checks validates the unauthenticated signals against the authenticated ones. Note that Not Verified status

					does not imply directly spoofing attacks, to identify spoofing alerts refer to UBX-SEC-SIG. • 0 = Not Verified: The mixed solution does not agree with the NMA authenticated data or the comparison could not be performed, e.g., not enough authenticated SVs to extrapolate the result or cryptographic data not decoded yet • 1 = Verified: The mixed solution agrees with the NMA authenticated data Currently, the only existing NMA method is Galileo Open Service Navigation Message Authentication (OSNMA) protocol.
80	U1[4]	`reserved0`	-	-	Reserved
84	I4	`headVeh`	1e-5	deg	Heading of vehicle (2-D), this is only valid when headVehValid is set, otherwise the output is set to the heading of motion
88	I2	`magDec`	1e-2	deg	Magnetic declination. Only supported in ADR 4.10 and later.
90	U2	`magAcc`	1e-2	deg	Magnetic declination accuracy. Only supported in ADR 4.10 and later.

3.14.12 UBX-NAV-RESETODO (0x01 0x10)

3.14.12.1 Reset odometer

Message	**UBX-NAV-RESETODO** **Reset odometer**					
Type	Command					
Comment	This message resets the traveled distance computed by the odometer (see UBX-NAV-ODO). UBX-ACK-ACK or UBX-ACK-NAK are returned to indicate success or failure.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01	0x10	0	*see below*	CK_A CK_B
Payload	This message has no payload.					

3.14.13 UBX-NAV-SAT (0x01 0x35)

3.14.13.1 Satellite information

Message	**UBX-NAV-SAT** **Satellite information**					
Type	Periodic/polled					
Comment	This message displays information about SVs that are either known to be visible or currently tracked by the receiver. All signal related information corresponds to the subset of signals specified in Signal Identifiers.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

3.14.17 UBX-NAV-STATUS (0x01 0x03)

3.14.17.1 Receiver navigation status

Message	**UBX-NAV-STATUS** **Receiver navigation status**					
Type	Periodic/polled					
Comment	See important comments concerning the validity of the position given in section Navigation output filters in the Integration manual.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01	0x03	16	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. For details, see section iTOW timestamps in the integration manual.
4	U1	gpsFix	-	-	GPSfix Type, this value does **not** qualify a fix as valid and within the limits. See note on flag gpsFixOk below. • 0x00 = no fix • 0x01 = dead reckoning only • 0x02 = 2D-fix • 0x03 = 3D-fix • 0x04 = GPS + dead reckoning combined • 0x05 = Time only fix • 0x06..0xff = reserved
5	X1	flags	-	-	Navigation Status Flags
bit 0	U:1	gpsFixOk	-	-	1 = position and velocity valid and within DOP and ACC Masks.
bit 1	U:1	diffSoln	-	-	1 = differential corrections were applied
bit 2	U:1	wknSet	-	-	1 = Week Number valid (for details, see section Time validity in the Integration manual)
bit 3	U:1	towSet	-	-	1 = Time of Week valid (for details, see section Time validity in the integration manual)
6	X1	fixStat	-	-	Fix Status Information
bit 0	U:1	diffCorr	-	-	1 = differential corrections available
bit 1	U:1	carrSolnValid	-	-	1 = valid carrSoln
bits 7...6	U:2	mapMatching	-	-	map matching status: • 00: none • 01: valid but not used, i.e. map matching data was received, but was too old • 10: valid and used, map matching data was applied • 11: valid and used, map matching data was applied. In case of sensor unavailability map

						matching data enables dead reckoning. This requires map matched latitude/longitude or heading data.
7		X1	flags2	-	-	further information about navigation output
	bits 1...0	U:2	psmState	-	-	power save mode state (not supported for protocol versions less than 13.01) • 0 = ACQUISITION [or when psm disabled] • 1 = TRACKING • 2 = POWER OPTIMIZED TRACKING • 3 = INACTIVE
	bits 4...3	U:2	spoofDetState	-	-	Spoofing detection state (not supported for protocol versions less than 18.00) • 0: Unknown or deactivated • 1: No spoofing indicated • 2: Spoofing indicated • 3: Multiple spoofing indications Note that the spoofing state value only reflects the detector state for the current navigation epoch. As spoofing can be detected most easily at the transition from real signal to spoofing signal, this is also where the detector is triggered the most. I.e. a value of *1 - No spoofing indicated* does not mean that the receiver is not spoofed, it simply states that the detector was not triggered in this epoch.
	bits 7...6	U:2	carrSoln	-	-	Carrier phase range solution status: • 0 = no carrier phase range solution • 1 = carrier phase range solution with floating ambiguities • 2 = carrier phase range solution with fixed ambiguities
8		U4	ttff	-	ms	Time to first fix (millisecond time tag)
12		U4	msss	-	ms	Milliseconds since startup / reset

3.14.18 UBX-NAV-TIMEBDS (0x01 0x24)

3.14.18.1 BeiDou time solution

Message	**UBX-NAV-TIMEBDS** **BeiDou time solution**					
Type	Periodic/polled					
Comment	This message reports the precise BDS time of the most recent navigation solution including validity flags and an accuracy estimate.

0	U4	`iTOW`	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	I4	`fTOW`	-	ns	Fractional part of iTOW (range: +/-500000). The precise GPS time of week in seconds is: `(iTOW * 1e-3) + (fTOW * 1e-9)`
8	I2	`week`	-	-	GPS week number of the navigation epoch
10	I1	`leapS`	-	s	GPS leap seconds (GPS-UTC)
11	X1	`valid`	-	-	Validity Flags
bit 0	U:1	`towValid`	-	-	1 = Valid GPS time of week (iTOW & fTOW, (see section Time validity in the integration manual for details)
bit 1	U:1	`weekValid`	-	-	1 = Valid GPS week number (see section Time validity in the integration manual for details)
bit 2	U:1	`leapSValid`	-	-	1 = Valid GPS leap seconds
12	U4	`tAcc`	-	ns	Time Accuracy Estimate

3.14.21 UBX-NAV-TIMELS (0x01 0x26)

3.14.21.1 Leap second event information

Message	**UBX-NAV-TIMELS** **Leap second event information**					
Type	Periodic/polled					
Comment	Information about the upcoming leap second event if one is scheduled.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01	0x26	24	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U4	`iTOW`	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	U1	`version`	-	-	Message version (0x00 for this version)
5	U1[3]	`reserved0`	-	-	Reserved

8	U1	srcOfCurrLs	-	-	Information source for the current number of leap seconds. • 0 = Default (hardcoded in the firmware, can be outdated) • 1 = Derived from time difference between GPS and GLONASS time • 2 = GPS • 3 = SBAS • 4 = BeiDou • 5 = Galileo • 6 = Aided data • 7 = Configured • 8 = NavIC • 255 = Unknown
9	I1	currLs	-	s	Current number of leap seconds since start of GPS time (Jan 6, 1980). It reflects how much GPS time is ahead of UTC time. Galileo number of leap seconds is the same as GPS. BeiDou number of leap seconds is 14 less than GPS. GLONASS follows UTC time, so no leap seconds.
10	U1	srcOfLsChange	-	-	Information source for the future leap second event. • 0 = No source • 2 = GPS • 3 = SBAS • 4 = BeiDou • 5 = Galileo • 6 = GLONASS • 7 = NavIC
11	I1	lsChange	-	s	Future leap second change if one is scheduled. +1 = positive leap second, -1 = negative leap second, 0 = no future leap second event scheduled or no information available. If the value is 0, then the amount of leap seconds did not change and the event should be ignored.
12	I4	timeToLsEvent	-	s	Number of seconds until the next leap second event, or from the last leap second event if no future event scheduled. If > 0 event is in the future, = 0 event is now, < 0 event is in the past. Valid only if validTimeToLsEvent = 1.
16	U2	dateOfLsGps Wn	-	-	GPS week number (WN) of the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1.
18	U2	dateOfLsGps Dn	-	-	GPS day of week number (DN) for the next leap second event or the last one if no future event scheduled. Valid only if validTimeToLsEvent = 1. (GPS and Galileo DN: from 1 = Sun to 7 = Sat. BeiDou DN: from 0 = Sun to 6 = Sat.)
20	U1[3]	reserved1	-	-	Reserved
23	X1	valid	-	-	Validity flags
bit 0	U:1	validCurrLs	-	-	1 = Valid current number of leap seconds value.
bit 1	U:1	validTimeToLs Event	-	-	1 = Valid time to next leap second event or from the last leap second event if no future event scheduled.

3.14.22 UBX-NAV-TIMENAVIC (0x01 0x63)

3.14.22.1 NavIC time solution

Message	**UBX-NAV-TIMENAVIC** **NavIC time solution**					
Type	Periodic/polled					
Comment	This message reports the precise NavIC time of the most recent navigation solution including validity flags and an accuracy estimate.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01	0x63	20	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U4	`iTOW`	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	U4	`NavICTow`	-	s	NavIC time of week (rounded to seconds)
8	I4	`fNavICTow`	-	ns	Fractional part of the NavIC time of week (range: +/-500000000). The precise NavIC time of week in seconds is: `NavICTow + fNavICTow * 1e-9`
12	I2	`NavICWno`	-	-	NavIC week number
14	I1	`leapS`	-	s	NavIC leap seconds (NavIC-UTC)
15	X1	`valid`	-	-	Validity Flags
bit 0	U:1	`NavICTow Valid`	-	-	1 = Valid NavICTow and fNavICTow (see section Time validity in the integration manual for details)
bit 1	U:1	`NavICWno Valid`	-	-	1 = Valid NavICWno (see section Time validity in the integration manual for details)
bit 2	U:1	`leapSValid`	-	-	1 = Valid leapS
16	U4	`tAcc`	-	ns	Time Accuracy Estimate

3.14.23 UBX-NAV-TIMEQZSS (0x01 0x27)

3.14.23.1 QZSS time solution

Message	**UBX-NAV-TIMEQZSS** **QZSS time solution**					
Type	Periodic/polled					
Comment	This message reports the precise QZSS time of the most recent navigation solution including validity flags and an accuracy estimate. See the Clocks and time section in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01	0x27	20	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U4	`iTOW`	-	ms	GPS time of week of the navigation epoch.
4	U4	`qzssTow`	-	s	QZSS time of week (rounded to seconds)

8		I4	fQzssTow	-	ns	Fractional part of QZSS time of week (range: +/-500000000). The precise QZSS time of week in seconds is: qzssTow + (fQzssTow * 1e-9)
12		I2	qzssWno	-	-	QZSS week number of the navigation epoch
14		I1	leapS	-	s	QZSS leap seconds (QZSS-UTC)
15		X1	valid	-	-	Validity Flags
	bit 0	U:1	qzssTowValid	-	-	1 = Valid QZSS time of week (qzssTow and fQzssTow)
	bit 1	U:1	qzssWnoValid	-	-	1 = Valid QZSS week number
	bit 2	U:1	leapSValid	-	-	1 = Valid QZSS leap seconds
16		U4	tAcc	-	ns	Time Accuracy Estimate

3.14.24 UBX-NAV-TIMEUTC (0x01 0x21)

3.14.24.1 UTC time solution

Message	**UBX-NAV-TIMEUTC** **UTC time solution**					
Type	Periodic/polled					
Comment	Note that during a leap second there may be more or less than 60 seconds in a minute. See the description of leap seconds in the integration manual for details.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x01	0x21	20	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	U4	tAcc	-	ns	Time accuracy estimate (UTC)
8	I4	nano	-	ns	Fraction of second, range -1e9 .. 1e9 (UTC)
12	U2	year	-	y	Year, range 1999..2099 (UTC)
14	U1	month	-	month	Month, range 1..12 (UTC)
15	U1	day	-	d	Day of month, range 1..31 (UTC)
16	U1	hour	-	h	Hour of day, range 0..23 (UTC)
17	U1	min	-	min	Minute of hour, range 0..59 (UTC)
18	U1	sec	-	s	Seconds of minute, range 0..60 (UTC)
19	X1	valid	-	-	Validity Flags
bit 0	U:1	validTOW	-	-	1 = Valid Time of Week (see section Time validity in the integration manual for details)
bit 1	U:1	validWKN	-	-	1 = Valid Week Number (see section Time validity in the integration manual for details)
bit 2	U:1	validUTC	-	-	1 = Valid UTC Time
bit 3	U:1	authStatus	-	-	Indicates if the parameters used to convert GNSS time into UTC time have been authenticated. • 0 = Unknown • 1 = Authenticated

					Note that currently the only data authentication function is provided by Galileo Open Service Navigation Message Authentication (OSNMA) protocol for E1 I/NAV message which means that data can only be authenticated for EU UTC standard.
bits 7...4	U:4	utcStandard	-	-	UTC standard identifier. (Not supported for protocol versions less than 15.00) • 0 = Information not available • 1 = Communications Research Labratory (CRL), Tokyo, Japan • 2 = National Institute of Standards and Technology (NIST) • 3 = U.S. Naval Observatory (USNO) • 4 = International Bureau of Weights and Measures (BIPM) • 5 = European laboratories • 6 = Former Soviet Union (SU) • 7 = National Time Service Center (NTSC), China • 8 = National Physics Laboratory India (NPLI) • 15 = Unknown

3.14.25 UBX-NAV-VELECEF (0x01 0x11)

3.14.25.1 Velocity solution in ECEF

Message	**UBX-NAV-VELECEF** **Velocity solution in ECEF**					
Type	Periodic/polled					
Comment	See important comments concerning validity of position given in section Navigation output filters in the integration manual.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*

0	U4	iTOW	-	ms	GPS time of week of the navigation epoch. See section iTOW timestamps in the integration manual for details.
4	I4	velN	-	cm/s	North velocity component
8	I4	velE	-	cm/s	East velocity component
12	I4	velD	-	cm/s	Down velocity component
16	U4	speed	-	cm/s	Speed (3-D)
20	U4	gSpeed	-	cm/s	Ground speed (2-D)
24	I4	heading	1e-5	deg	Heading of motion 2-D
28	U4	sAcc	-	cm/s	Speed accuracy Estimate
32	U4	cAcc	1e-5	deg	Course / Heading accuracy estimate

3.15 UBX-RXM (0x02)

The messages in the UBX-RXM class are used to output status and result data from the receiver manager as well as sending commands to the receiver manager.

3.15.1 UBX-RXM-MEASX (0x02 0x14)

3.15.1.1 Satellite measurements for RRLP

Message	**UBX-RXM-MEASX** **Satellite measurements for RRLP**					
Type	Periodic/polled					
Comment	The message payload data is, where possible and appropriate, according to the Radio Resource LCS (Location Services) Protocol (RRLP) [1]. One exception is the satellite and GNSS IDs, which here are given according to the Satellite Numbering scheme. The correct satellites have to be selected and their satellite ID translated accordingly [1, tab. A.10.14] for use in a RRLP Measure Position Response Component. Similarly, the measurement reference time of week has to be forwarded correctly (modulo 14400000 for the 24 LSB GPS measurements variant, modulo 3600000 for the 22 LSB Galileo and Additional Navigation Satelllite Systems (GANSS) measurements variant) of the RRLP measure position response to the SMLC. Reference: [1] ETSI TS 144 031 V11.0.0 (2012-10), Digital cellular telecommunications system (Phase 2+), Location Services (LCS), Mobile Station (MS) - Serving Mobile Location Centre (SMLC), Radio Resource LCS Protocol (RRLP), (3GPP TS 44.031 version 11.0.0 Release 11).

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`gnssId`	-	-	GNSS identifier (see Satellite Numbering)
1	U1	`svId`	-	-	Satellite identifier (see Satellite Numbering)
2	U1	`sigId`	-	-	Signal identifier (see Signal Identifiers)
3	U1	`freqId`	-	-	Only used for GLONASS: This is the frequency slot + 7 (range from 0 to 13)
4	U1	`numWords`	-	-	The number of data words contained in this message (up to 10, for currently supported signals)
5	U1	`chn`	-	-	The tracking channel number the message was received on
6	U1	`version`	-	-	Message version, (0x02 for this version)
7	U1	`reserved0`	-	-	Reserved
Start of repeated group (`numWords` times)					

8 + n·4	U4	dwrd	-	-	The data words
End of repeated group (numWords times)					

3.16 UBX-SEC (0x27)

The messages in the UBX-SEC class are used for security features of the receiver.

3.16.1 UBX-SEC-SIG (0x27 0x09)

3.16.1.1 Signal security information

Message	**UBX-SEC-SIG** **Signal security information**					
Type	Periodic/polled					
Comment	Information related to the security, i.e. availability and integrity, of the signals.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x27	0x09	12	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	version	-	-	Message version (0x01 for this version)
1	U1[3]	reserved0	-	-	Reserved
4	X1	jamFlags	-	-	Information related to jamming/interference
bit 0	U:1	jamDetEnabled	-	-	Flag indicates whether jamming/interference detection is enabled
bits 2...1	U:2	jammingState	-	-	Jamming/interference state • 0: Unknown • 1: No jamming indicated • 2: Warning; jamming indicated but fix OK • 3: Critical; jamming indicated and no fix
5	U1[3]	reserved1	-	-	Reserved
8	X1	spfFlags	-	-	Information related to GNSS spoofing
bit 0	U:1	spfDetEnabled	-	-	Flag indicates whether spoofing detection is enabled
bits 3...1	U:3	spoofingState	-	-	Spoofing state • 0: Unknown • 1: No spoofing indicated • 2: Spoofing indicated • 3: Spoofing affirmed Note that the spoofing state value only reflects the detector state for the current navigation epoch. I.e. a value of *1: No spoofing indicated* does not mean that the receiver is not spoofed, it simply states that the detector was not triggered in this epoch.
9	U1[3]	reserved2	-	-	Reserved

3.16.2 UBX-SEC-SIGLOG (0x27 0x10)

3.16.2.1 Signal security log

Message	**UBX-SEC-SIGLOG** **Signal security log**					
Type	Periodic/polled					
Comment	This message provides a log of past signal security related events, that is, events related to jamming and spoofing. Each event is a combination of a detection type and a event type, where the event type 'indication started' and 'indication stopped' and also the event type 'indication triggered' and 'indication timed-out' form a pair. A maximum of 16 events are logged; after the log is filled, recent events take precedence over past events in the log. Power cycles and restarts of the receiver reset the log, deleting its content. Note: It is advised not to restart the receiver while it's indicating spoofing.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x27	0x10	8 + numEvents·8	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	`version`	-	-	Message version (0x00 for this version)
1	U1	`numEvents`	-	-	Number of events
2	U1[6]	`reserved0`	-	-	Reserved
Start of repeated group (`numEvents` times)					
8 + n·8	U4	`timeElapsed`	-	s	Seconds elapsed since this event Special value 0xFFFFFFFF: more than 45 days
12 + n·8	U1	`detectionType`	-	-	Type of the spoofing or jamming detection: • 0 = simulated signal • 1 = abnormal signal • 2 = INS/GNSS mismatch • 3 = abrupt changes in GNSS signal • 4 = broadband jamming/interference (deprecated) • 5 = narrowband jamming/interference (deprecated)
13 + n·8	U1	`eventType`	-	-	Type of the event: • 0 = indication started • 1 = indication stopped • 2 = indication triggered • 3 = indication timed-out Note: Single epoch events, caused by abrupt changes due to switching from the real to the spoofing signal or vice versa are handled as time-out events. This means that the time-out event is reported after a certain cool off period which is not related to any observations in the signal. The other detection types make use of 'start' and 'stop' event types.
14 + n·8	U1[2]	`reserved1`	-	-	Reserved
End of repeated group (`numEvents` times)					

3.16.3 UBX-SEC-UNIQID (0x27 0x03)

3.16.3.1 Unique chip ID

Message	**UBX-SEC-UNIQID** **Unique chip ID**
Type	Output

Comment	This message is used to retrieve a unique chip identifier (40 bits, 5 bytes).					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x27	0x03	9	*see below*	CK_A CK_B

bit 2	U:1	`newFallingEdge`	-	-	New falling edge detected
bits 4...3	U:2	`timeBase`	-	-	• 0=Time base is Receiver time • 1=Time base is GNSS time (the system according to the configuration in CFG-TP Configuration Items for tpIdx=0) • 2=Time base is UTC (the variant according to the configuration in CFG-NAVSPG-* configuration items)
bit 5	U:1	`utc`	-	-	• 0=UTC not available • 1=UTC available
bit 6	U:1	`time`	-	-	• 0=Time is not valid

					• 1=Time is valid (Valid GNSS fix)
bit 7	U:1	newRisingEdge	-	-	New rising edge detected
2	U2	count	-	-	Rising edge counter
4	U2	wnR	-	-	Week number of last rising edge
6	U2	wnF	-	-	Week number of last falling edge
8	U4	towMsR	-	ms	Tow of rising edge
12	U4	towSubMsR	-	ns	Millisecond fraction of tow of rising edge in nanoseconds
16	U4	towMsF	-	ms	Tow of falling edge
20	U4	towSubMsF	-	ns	Millisecond fraction of tow of falling edge in nanoseconds
24	U4	accEst	-	ns	Accuracy estimate

3.17.2 UBX-TIM-TP (0x0d 0x01)

3.17.2.1 Time pulse time data

Message	**UBX-TIM-TP** **Time pulse time data**					
Type	Periodic/polled					
Comment	This message contains information on the timing of the next pulse at the TIMEPULSE0 output. The recommended configuration when using this message is to set both the measurement rate (CFG-RATE) and the timepulse frequency (CFG-TP) to 1 Hz.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x0d	0x01	16	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U4	towMS	-	ms	Time pulse time of week according to time base
4	U4	towSubMS	2^-32	ms	Submillisecond part of towMS
8	I4	qErr	-	ps	Quantization error of time pulse
12	U2	week	-	weeks	Time pulse week number according to time base
14	X1	flags	-	-	Flags
bit 0	U:1	timeBase	-	-	• 0 = Time base is GNSS • 1 = Time base is UTC
bit 1	U:1	utc	-	-	• 0 = UTC not available • 1 = UTC available
bits 3...2	U:2	raim	-	-	(T)RAIM information • 0 = Information not available • 1 = Not active • 2 = Active
bit 4	U:1	qErrInvalid	-	-	• 0 = Quantization error valid • 1 = Quantization error invalid
bit 5	U:1	TpNotLocked	-	-	• 0 = Next TP is locked to GNSS • 1 = Next TP is based on local time and not locked to GNSS - week/tow may be invalid

15		X1	refInfo	-	-	Time reference information
	bits 3...0	U:4	timeRefGnss	-	-	GNSS reference information. Only valid if time base is GNSS (timeBase=0). • 0 = GPS • 1 = GLONASS • 2 = BeiDou • 3 = Galileo • 4 = NavIC • 15 = Unknown
	bits 7...4	U:4	utcStandard	-	-	UTC standard identifier. Only valid if time base is UTC (timeBase=1). • 0 = Information not available • 1 = Communications Research Laboratory (CRL), Tokyo, Japan • 2 = National Institute of Standards and Technology (NIST) • 3 = U.S. Naval Observatory (USNO) • 4 = International Bureau of Weights and Measures (BIPM) • 5 = European laboratories • 6 = Former Soviet Union (SU) • 7 = National Time Service Center (NTSC), China • 8 = National Physics Laboratory India (NPLI) • 15 = Unknown

3.17.3 UBX-TIM-VRFY (0x0d 0x06)

3.17.3.1 Sourced time verification

Message	**UBX-TIM-VRFY** **Sourced time verification**					
Type	Periodic/polled					
Comment	This message contains verification information about previous time received via assistance data or from RTC.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x0d	0x06	20	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	I4	itow	-	ms	integer millisecond tow received by source
4	I4	frac	-	ns	sub-millisecond part of tow
8	I4	deltaMs	-	ms	integer milliseconds of delta time (current time minus sourced time)
12	I4	deltaNs	-	ns	Sub-millisecond part of delta time
16	U2	wno	-	week	Week number
18	X1	flags	-	-	Flags
bits 2...0	U:3	src	-	-	Aiding time source • 0 = no time aiding done • 2 = source was RTC

					• 3 = source was assistance data
19	U1	reserved0	-	-	Reserved

3.18 UBX-UPD (0x09)

The messages in the UBX-UPD class are used to download a firmware to the receiver and to update the firmware on the flash.

3.18.1 UBX-UPD-SOS (0x09 0x14)

3.18.1.1 Poll backup restore status

Message	**UBX-UPD-SOS**					
	Poll backup restore status					
Type	Poll request					
Comment	Sending this (empty) message to the receiver results in the receiver returning a *System restored from backup* message as defined below.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x09	0x14	0	*see below*	CK_A CK_B
Payload	This message has no payload.					

3.18.1.2 Create backup in flash

Message	**UBX-UPD-SOS**					
	Create backup in flash					
Type	Command					
Comment	The host can send this message in order to save part of the battery-backed memory (BBR) in a file in the flash file system. The feature is designed in order to emulate the presence of the backup battery even if it is not present; the host can issue the save on shutdown command before switching off the device supply. It is recommended to issue a GNSS stop command using UBX-CFG-RST before in order to keep the BBR memory content consistent.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x09	0x14	4	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	cmd	-	-	Command (must be 0)
1	U1[3]	reserved0	-	-	Reserved

3.18.1.3 Clear backup in flash

Message	**UBX-UPD-SOS**					
	Clear backup in flash					
Type	Command					
Comment	The host can send this message in order to erase the backup file present in flash. It is recommended that the clear operation is issued after the host has received the notification that the memory has been restored after a reset. Alternatively the host can parse the startup string *Restored data saved on shutdown* or poll the UBX-UPD-SOS message for obtaining the status.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x09	0x14	4	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*

0	U1	cmd	-	-	Command (must be 1)
1	U1[3]	reserved0	-	-	Reserved

3.18.1.4 Backup creation acknowledge

Message	**UBX-UPD-SOS** **Backup creation acknowledge**					
Type	Output					
Comment	The message is sent from the device as confirmation of creation of a backup file in flash. The host can safely shut down the device after having received this message.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x09	0x14	8	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	cmd	-	-	Command (must be 2)
1	U1[3]	reserved0	-	-	Reserved
4	U1	response	-	-	• 0 = Not acknowledged • 1 = Acknowledged
5	U1[3]	reserved1	-	-	Reserved

3.18.1.5 System restored from backup

Message	**UBX-UPD-SOS** **System restored from backup**					
Type	Output					
Comment	The message is sent from the device to notify the host the BBR has been restored from a backup file in the flash file system. The host should clear the backup file after receiving this message. If the UBX-UPD-SOS message is polled, this message is resent.					
Message structure	*Header*	*Class*	*ID*	*Length (Bytes)*	*Payload*	*Checksum*
	0xb5 0x62	0x09	0x14	8	*see below*	CK_A CK_B

Payload description:

Byte offset	*Type*	*Name*	*Scale*	*Unit*	*Description*
0	U1	cmd	-	-	Command (must be 3)
1	U1[3]	reserved0	-	-	Reserved
4	U1	response	-	-	• 0 = Unknown • 1 = Failed restoring from backup • 2 = Restored from backup • 3 = Not restored (no backup)
5	U1[3]	reserved1	-	-	Reserved

4 Configuration interface

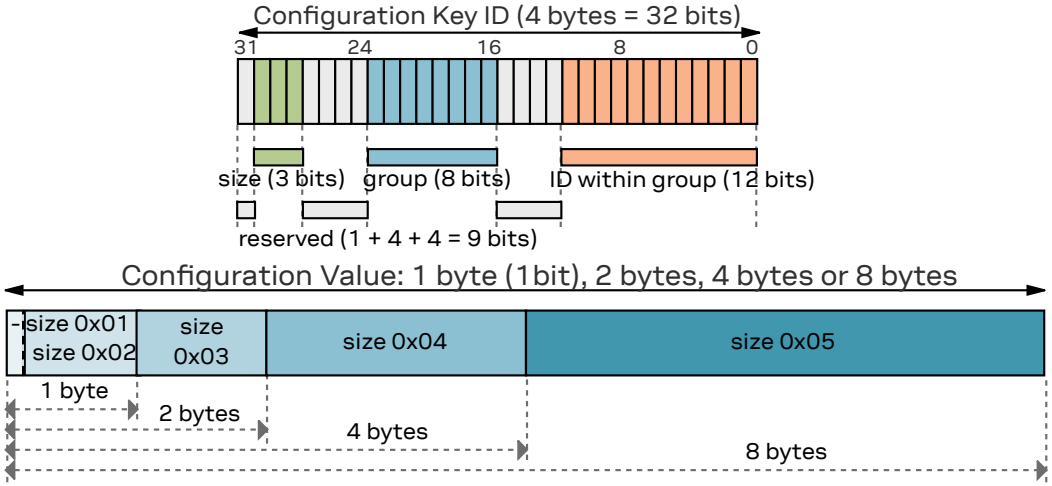
This chapter describes the receiver configuration interface.

4.1 Configuration database

The configuration database in the receiver's RAM holds the current configuration, which is used by the receiver at run-time. It is constructed on startup of the receiver from several sources of configuration. These sources are called *Configuration Layers*. The current configuration is called the *RAM Layer*. Any configuration in any layer is organized as *Configuration Items*, where each Configuration Item is referenced to by a unique *Configuration Key ID* and holds a single *Configuration Value*.

4.2 Configuration items

The following figure shows the structure of a *Configuration Item*, which consists of a *(Configuration) Key ID* and its *(Configuration) Value*:



A Configuration Key ID is a 32-bit integer value, which is split into the following parts:

- Bit 31: Currently unused. Reserved for future use.
- Bits 30...28: Three bits that indicate the storage size of a Configuration Value (range 0x01-0x05, see below)
- Bits 27...24: Currently unused. Reserved for future use.
- Bits 23...16: Eight bits that define a unique group ID (range 0x01-0xfe)
- Bits 15...12: Currently unused. Reserved for future use.
- Bits 11...0: Twelve bits that define a unique item ID within a group (range 0x001-0xffe)

The entire 32-bit value is the unique Key ID, which uniquely identifies a particular item. The numeric representation of the Key ID uses the lower-case hexadecimal format, such as `0x20c400a1`. An easier, more readable text representation uses the form CFG-*GROUP-ITEM*. This is also referred to as the *(Configuration) Key Name*.

Supported storage size identifiers (bits 30...28 of the Key ID) are:

- 0x01: one bit (the actual storage used is one byte, but only the least significant bit is used)
- 0x02: one byte
- 0x03: two bytes
- 0x04: four bytes

- 0x05: eight bytes

Each Configuration Item is of a certain type, which defines the interpretation of the raw binary data (see also UBX data types):

- U1, U2, U4, U8: unsigned little-endian integers of 8-, 16-, 32- and 64-bit widths
- I1, I2, I4, I8: signed little-endian, two's complement integers of 8-, 16-, 32- and 64-bit widths
- R4, R8: IEEE 754 single (32-bit) and double (64-bit) precision floats
- E1, E2, E4: unsigned little-endian enumeration of 8-, 16-, and 32-bit widths
- X1, X2, X4, X8: unsigned little-endian integers of 8-, 16-, 32- and 64-bit widths for bitfields and other binary data, such as strings
- L: single-bit boolean (true = 1, false = 0), stored as U1

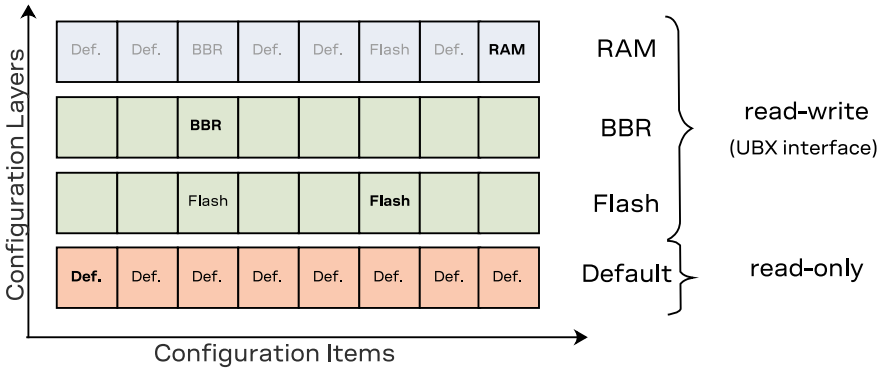
4.3 Configuration layers

The receiver has several *Configuration Layers*. They are separate sources of Configuration Items. Some of the layers are read-only and others are modifiable. Layers are organized in terms of priority. Values in a high-priority layer replace values stored in a low-priority layer. At startup, the receiver reads all configuration layers and stacks up the items to create the *Current Configuration*, which is used by the receiver at run-time.

The following configuration layers are available (in order of priority, highest priority first):

- **RAM**: This layer contains items stored in volatile RAM. This is the Current Configuration. The value of any item can be set by the user at run-time (see UBX protocol interface) and it is effective immediately.
- **BBR**: This layer contains items stored in the battery-backed RAM. The contents in this layer are preserved as long as a battery backup supply is provided during off periods. The value of any item can be set by the user at run-time (see UBX protocol interface) and it becomes effective when the receiver is restarted.
- **Flash**: This layer contains items stored permanently in the external flash memory. This layer is only available if there is a usable external flash memory. The value of any item can be set by the user at run-time (see UBX protocol interface) and it becomes effective when the receiver is restarted.
- **Default:** This layer contains all items known to the running receiver software and their hard-coded default values. Data in this layer is not writable.

The stacking of the configuration items from the different layers (sources) in order to construct the Current Configuration in the RAM Layer is depicted in the following figure. For each defined item, i.e. for each item in the Default Layer, the receiver software goes through the layers above and stacks all the found items on top. Some items may not be present in every layer. The result is the RAM Layer filled with all configuration items given Configuration Values coming from the highest priority layer the corresponding item was present. In the example figure below bold text indicates the source of the value in the Current Configuration (the RAM Layer). Empty boxes mean that the layer can hold the item but that it is not currently stored there. Boxes with text mean that an item is currently stored in the layer.



In the example figure above several items (e.g. the first item) are only set in the Default Layer and hence the default value ends up in Current Configuration in the RAM Layer. The third item is present in the Default, Flash and BBR Layers. The value from the BBR Layer has the highest priority and therefore it ends up in the RAM Layer. On the other hand, the default value of the sixth item is changed by the value in the Flash Layer. The value of the last item is changed in the RAM Layer only, i.e. upon startup the value in the RAM Layer was the value from the Default Layer, but the user has changed the value in the RAM Layer at run-time.

4.4 Configuration interface access

The following sections describe the existing interfaces to access the Configuration Database.

4.4.1 UBX protocol interface

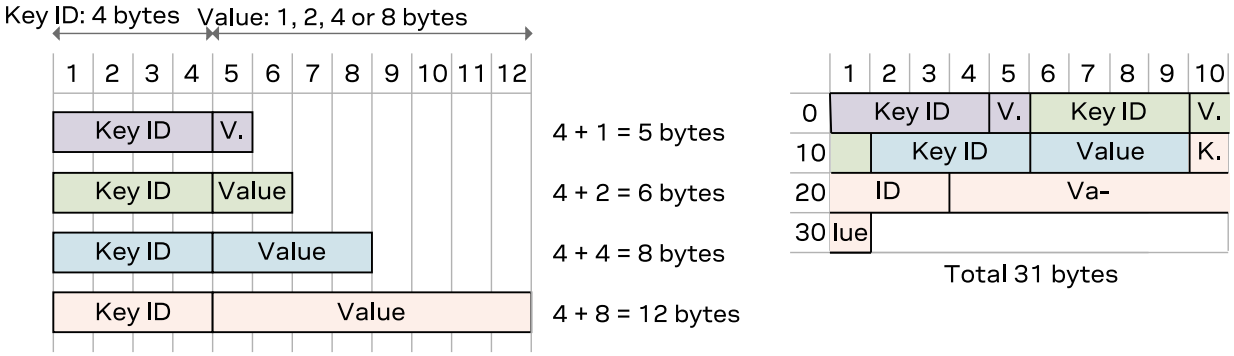
The following UBX protocol messages are available to access the Configuration Database:

- UBX-CFG-VALGET to read configuration items from the database
- UBX-CFG-VALSET to set configuration items in the database
- UBX-CFG-VALDEL to delete configuration items from the database

4.5 Configuration data

Configuration data is the binary representation of a list of Key ID and Value pairs. It is formed by concatenating keys (U4 values) and values (variable type) without any padding. This format is used in the UBX-CFG-VALSET and UBX-CFG-VALGET messages.

The figure below shows an example. The four Items (Key ID - Value pairs) on the left use the four fundamental storage sizes: one byte (L, U1, I1, E1 and X1 types), 2 bytes (U2, I2, E2 and X2 types), four byte (U4, I4, E4, X4 and R4 types) and eight bytes (U8, I8, X8 and R8 types). When concatenated (right) the Key IDs and Values are not aligned and there is no padding.



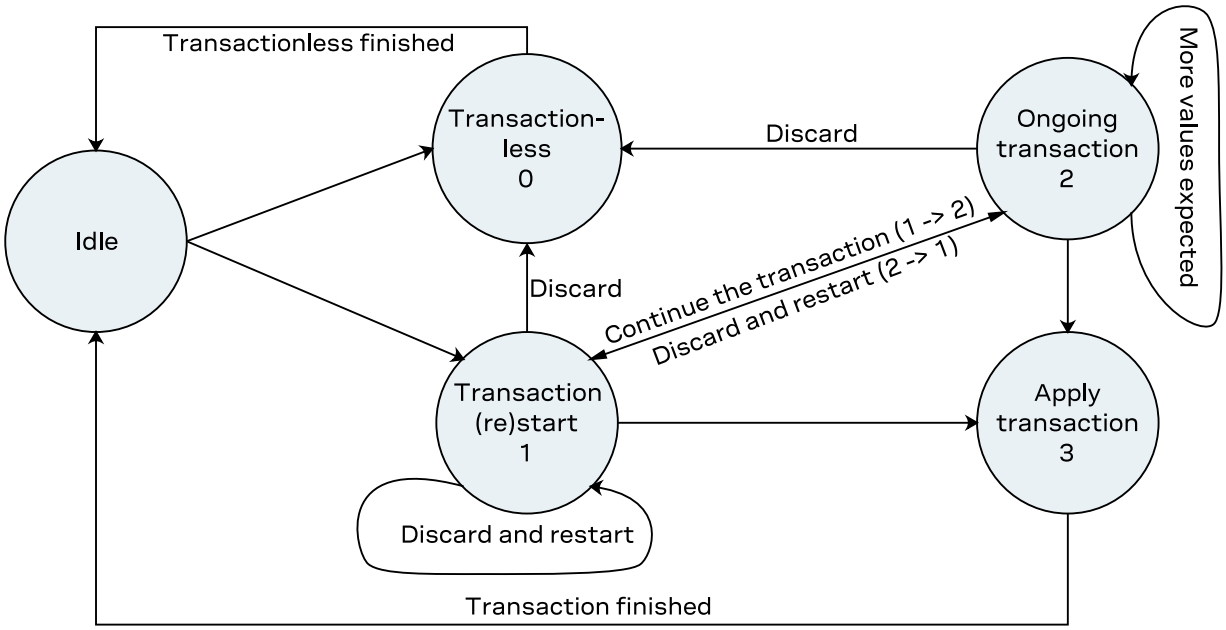
Note that this is an arbitrary example and any number of items of any value storage size can be concatenated the same way.

4.6 Configuration transactions

The configuration interface supports two mechanisms of configuration: the first is a transactionless mechanism where sent configuration changes are applied immediately to the configuration layer(s) requested. The second mechanism is a configuration transaction.

A transaction offers a way of queuing multiple configuration changes. It is particularly useful where different configuration keys depend on each other in such a way that sending one before the other can cause the configuration to be rejected. The queued configuration change requests are stored then checked collectively before being applied to the receiver.

A transaction can have the following states described in the figure below.



When starting a transaction, specify the layer(s) to apply the changes to. This list of configuration layer(s) must be observed throughout the transaction states. Modifying the configuration layer(s) mid-transaction causes the transaction to be aborted and consequently, no queued changes will be applied.

In the start transaction state, the receiver locks the configuration database so that changes from another entity or message cannot be applied. It is possible to send a configuration key-value pairs with the start transaction state. These are queued waiting to be applied.

In the ongoing state, a configuration key and value must be sent. The receiver aborts the transaction and does not apply any changes if this condition is violated. Key-value pairs sent in the ongoing state are queued waiting to be applied.

In the apply state, the receiver collectively checkes the queued changes and applied them to the requested configuration layer(s). Note that any additional key-value pairs sent within the apply state are ignored.

Note that a transaction can only come from a single source, a UBX-CFG-VALSET message or a UBX-CFG-VALDEL message. This means that in any given transaction it is not possible to mix a delete

and a save request. Starting a transaction from a different source aborts the current transaction and the queued changes are not applied.

Refer to UBX-CFG-VALSET and UBX-CFG-VALDEL messages for a detailed description of how to set up a configuration transaction, its limitations and conditions that would cause the transaction to be rejected.

4.7 Configuration reset behavior

The RAM layer is always rebuilt from the layers below when the chip's processor comes out from reset. When using UBX-CFG-RST the processor goes through a reset cycle with these reset types (`resetMode` field):

- `0x00` hardware reset (watchdog) immediately
- `0x01` controlled software reset
- `0x04` hardware reset (watchdog) after shutdown

See section Forcing a receiver reset in the integration manual.

4.8 Configuration overview

Group	Description
CFG-ANA	AssistNow Autonomous and Offline configuration
CFG-BDS	BeiDou system configuration
CFG-HW	Hardware configuration
CFG-I2C	Configuration of the I2C interface
CFG-I2CINPROT	Input protocol configuration of the I2C interface
CFG-I2COUTPROT	Output protocol configuration of the I2C interface
CFG-INFMSG	Information message configuration
CFG-ITFM	Jamming and interference monitor configuration
CFG-MOT	Motion detector configuration
CFG-MSGOUT	Message output configuration
CFG-NAVMASK	Satellite Mask Configuration
CFG-NAVSPG	Standard precision navigation configuration
CFG-NMEA	NMEA protocol configuration
CFG-ODO	Odometer and low-speed course over ground filter configuration
CFG-QZSS	QZSS system configuration
CFG-RATE	Navigation and measurement rate configuration
CFG-RINV	Remote inventory
CFG-SBAS	SBAS configuration
CFG-SEC	Security configuration
CFG-SIGNAL	Satellite systems (GNSS) signal configuration
CFG-SPI	Configuration of the SPI interface
CFG-SPIINPROT	Input protocol configuration of the SPI interface
CFG-SPIOUTPROT	Output protocol configuration of the SPI interface
CFG-TP	Time pulse configuration
CFG-TXREADY	TX ready configuration

Group	Description
CFG-UART1	Configuration of the UART1 interface
CFG-UART1INPROT	Input protocol configuration of the UART1 interface
CFG-UART1OUTPROT	Output protocol configuration of the UART1 interface

4.9 Configuration reference

4.9.1 CFG-ANA: AssistNow Autonomous and Offline configuration

Configuration for the AssistNow Autonomous feature. See section AssistNow Autonomous in the integration manual for feature details.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-ANA-USE_ANA	0x10230001	L	-	-	Use AssistNow Autonomous
CFG-ANA-ORBMAXERR	0x30230002	U2	-	m	Maximum acceptable (modeled) orbit error
Range is from 5 to 1000.					

Table 5: CFG-ANA configuration items

4.9.2 CFG-BDS: BeiDou system configuration

Note that enabling and disabling of individual GNSS is done via the CFG-SIGNAL configuration group.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-BDS-USE_GEO_PRN	0x10340014	L	-	-	Use BeiDou geostationary satellites (PRN 1-5 and 59-63)

Table 6: CFG-BDS configuration items

4.9.3 CFG-HW: Hardware configuration

Hardware configuration settings.

Note that not all settings are available for all products. See the applicable data sheet for supported features.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-HW-ANT_CFG_VOLTCTRL	0x10a3002e	L	-	-	Active antenna voltage control flag
Enable active antenna voltage control flag. Used by EXT and MADC engines.					
CFG-HW-ANT_CFG_SHORTDET	0x10a3002f	L	-	-	Short antenna detection flag
Enable short antenna detection flag. Used by EXT and MADC engines.					
CFG-HW-ANT_CFG_SHORTDET_POL	0x10a30030	L	-	-	Short antenna detection polarity
Set to true if polarity of the antenna short detection is active low. Used by EXT engine.					
CFG-HW-ANT_CFG_OPENDET	0x10a30031	L	-	-	Open antenna detection flag
Enable open antenna detection flag. Used by EXT and MADC engines.					
CFG-HW-ANT_CFG_OPENDET_POL	0x10a30032	L	-	-	Open antenna detection polarity
Set to true if polarity of the antenna open detection is active low. Used by EXT engine.					
CFG-HW-ANT_CFG_PWRDOWN	0x10a30033	L	-	-	Power down antenna flag
Enable power down antenna logic in the event of antenna short circuit. CFG-HW-ANT_CFG_SHORTDET must be enabled to use this feature. Used by EXT and MADC engines.					
CFG-HW-ANT_CFG_PWRDOWN_POL	0x10a30034	L	-	-	Power down antenna logic polarity
Set to true if polarity of the antenna power down logic is active high. Used by EXT and MADC engines.					

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-HW-ANT_CFG_RECOVER	0x10a30035	L	-	-	Automatic recovery from short state flag
Enable automatic recovery from short state. Used by EXT and MADC engines.					
CFG-HW-ANT_SUP_SWITCH_PIN	0x20a30036	U1	-	-	Antenna switch PIO number
Antenna switch PIO number. Used by EXT and MADC engines.					
CFG-HW-ANT_SUP_SHORT_PIN	0x20a30037	U1	-	-	Antenna short detection PIO number
Antenna short detection PIO number. Used by EXT engine.					
CFG-HW-ANT_SUP_OPEN_PIN	0x20a30038	U1	-	-	Antenna open detection PIO number
Antenna open detection PIO number. Used by EXT engine.					
CFG-HW-ANT_ON_SHORT_US	0x30a3003c	U2	-	-	ANT on->short timeout[us]
Delay in microseconds between turning the antenna power supply on and enabling the antenna short circuit detection.					
CFG-HW-ANT_SUP_ENGINE	0x20a30054	E1	-	-	Antenna supervisor engine selection
Select the engine used to evaluate antenna state. The EXT engine uses an external comparator for current measurement. The MADC engine uses built-in measurement ADC and requires only a shunt resistor for current measurement. The MADC engine is supported only in selected u-blox generation 9 receivers. See Table 8 below for a list of possible constants for this item.					
CFG-HW-ANT_SUP_SHORT_THR	0x20a30055	U1	-	mV	Antenna supervisor MADC engine short detection threshold
Threshold above which antenna short is detected. Used by MADC engine.					
CFG-HW-ANT_SUP_OPEN_THR	0x20a30056	U1	-	mV	Antenna supervisor MADC engine open detection threshold
Threshold below which antenna open/disconnected is detected. Used by MADC engine.					
CFG-HW-RF_LNA_MODE	0x20a30057	E1	-	-	Mode for internal LNA
Sets the operating mode for the RF LNA. Lowgain or bypass options can be used if there is already a external LNA in front of the chip with sufficient gain. See Table 9 below for a list of possible constants for this item.					

Table 7: CFG-HW configuration items

Constant	Value	Description
EXT	0	Use the EXT engine.
MADC	1	Use the MADC engine.

Table 8: Constants for CFG-HW-ANT_SUP_ENGINE

Constant	Value	Description
NORMAL	0	All RFs. Normal operation, internal LNA enabled at full gain
LOWGAIN	1	All RFs. LNA enabled in low gain mode
BYPASS	2	All RFs. Bypass LNA

Table 9: Constants for CFG-HW-RF_LNA_MODE

4.9.4 CFG-I2C: Configuration of the I2C interface

Settings needed to configure the I2C communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-I2C-ADDRESS	0x20510001	U1	-	-	I2C address of the receiver (7 bits)
CFG-I2C-EXTENDEDTIMEOUT	0x10510002	L	-	-	Flag to disable timeouting the interface after 1.5 s

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-I2C-ENABLED	0x10510003	L	-	-	Flag to indicate if the I2C interface should be enabled

Table 10: CFG-I2C configuration items

4.9.5 CFG-I2CINPROT: Input protocol configuration of the I2C interface

Input protocol enable flags of the I2C interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-I2CINPROT-UBX	0x10710001	L	-	-	Flag to indicate if UBX should be an input protocol on I2C
CFG-I2CINPROT-NMEA	0x10710002	L	-	-	Flag to indicate if NMEA should be an input protocol on I2C

Table 11: CFG-I2CINPROT configuration items

4.9.6 CFG-I2COUTPROT: Output protocol configuration of the I2C interface

Output protocol enable flags of the I2C interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-I2COUTPROT-UBX	0x10720001	L	-	-	Flag to indicate if UBX should be an output protocol on I2C
CFG-I2COUTPROT-NMEA	0x10720002	L	-	-	Flag to indicate if NMEA should be an output protocol on I2C

Table 12: CFG-I2COUTPROT configuration items

4.9.7 CFG-INFMSG: Information message configuration

Information message configuration for the NMEA and UBX protocols.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-INFMSG-UBX_I2C	0x20920001	X1	-	-	Information message enable flags for the UBX protocol on the I2C interface
See Table 14 below for a list of possible constants for this item.					
CFG-INFMSG-UBX_UART1	0x20920002	X1	-	-	Information message enable flags for the UBX protocol on the UART1 interface
See Table 14 below for a list of possible constants for this item.					
CFG-INFMSG-UBX_SPI	0x20920005	X1	-	-	Information message enable flags for the UBX protocol on the SPI interface
See Table 14 below for a list of possible constants for this item.					
CFG-INFMSG-NMEA_I2C	0x20920006	X1	-	-	Information message enable flags for the NMEA protocol on the I2C interface
See Table 14 below for a list of possible constants for this item.					
CFG-INFMSG-NMEA_UART1	0x20920007	X1	-	-	Information message enable flags for the NMEA protocol on the UART1 interface
See Table 14 below for a list of possible constants for this item.					
CFG-INFMSG-NMEA_SPI	0x2092000a	X1	-	-	Information message enable flags for the NMEA protocol on the SPI interface
See Table 14 below for a list of possible constants for this item.					

Table 13: CFG-INFMSG configuration items

Constant	Value	Description
ERROR	0x01	Enable ERROR information messages
WARNING	0x02	Enable WARNING information messages

Constant	Value	Description
NOTICE	0x04	Enable NOTICE information messages
TEST	0x08	Enable TEST information messages
DEBUG	0x10	Enable DEBUG information messages

Table 14: Constants for CFG-INFMSG-UBX_I2C, CFG-INFMSG-UBX_UART1, CFG-INFMSG-UBX_SPI, CFG-INFMSG-NMEA_I2C, CFG-INFMSG-NMEA_UART1, CFG-INFMSG-NMEA_SPI

4.9.8 CFG-ITFM: Jamming and interference monitor configuration

Configuration of jamming and interference monitor.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-ITFM-BBTHRESHOLD	0x20410001	U1	-	-	Broadband jamming detection threshold
CFG-ITFM-CWTHRESHOLD	0x20410002	U1	-	-	CW jamming detection threshold
CFG-ITFM-ENABLE	0x1041000d	L	-	-	Enable interference detection
CFG-ITFM-ANTSETTING	0x20410010	E1	-	-	Antenna setting
See Table 16 below for a list of possible constants for this item.					
CFG-ITFM-ENABLE_AUX	0x10410013	L	-	-	Scan auxiliary bands
Set to true to scan auxiliary bands. Supported on u-blox 8 / u-blox M8 only, otherwise ignored.					

Table 15: CFG-ITFM configuration items

Constant	Value	Description
UNKNOWN	0	Unknown
PASSIVE	1	Passive
ACTIVE	2	Active

Table 16: Constants for CFG-ITFM-ANTSETTING

4.9.9 CFG-MOT: Motion detector configuration

The items in this group specify the parameters used for the internal receiver motion detector. The platform motion is assessed by combining the detected motion of different detectors looking at specific data types (i.e. GNSS, gyroscopes, accelerometers, wheel ticks). The decision thresholds of the internal detectors can be specified using the configuration items in this group.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-MOT-GNSSSPEED_THRS	0x20250038	U1	0.01	m/s	Static hold speed threshold, below which the receiver is considered to be stationary
Set this parameter to 0 to enable the default firmware value or behavior.					
CFG-MOT-GNSSDIST_THRS	0x3025003b	U2	1.0	m	Static hold distance threshold, within which the receiver is considered to be stationary
Set this parameter to 0 to enable the default firmware value or behavior.					

Table 17: CFG-MOT configuration items

4.9.10 CFG-MSGOUT: Message output configuration

For each message and port a separate output rate (per second, per epoch) can be configured.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-MSGOUT-NMEA_ID_DTM_I2C	0x209100a6	U1	-	-	Output rate of the NMEA-GX-DTM message on port I2C
CFG-MSGOUT-NMEA_ID_DTM_SPI	0x209100aa	U1	-	-	Output rate of the NMEA-GX-DTM message on port SPI

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-MSGOUT-NMEA_ID_DTM_UART1	0x209100a7	U1	-	-	Output rate of the NMEA-GX-DTM message on port UART1
CFG-MSGOUT-NMEA_ID_GBS_I2C	0x209100dd	U1	-	-	Output rate of the NMEA-GX-GBS message on port I2C
CFG-MSGOUT-NMEA_ID_GBS_SPI	0x209100e1	U1	-	-	Output rate of the NMEA-GX-GBS message on port SPI
CFG-MSGOUT-NMEA_ID_GBS_UART1	0x209100de	U1	-	-	Output rate of the NMEA-GX-GBS message on port UART1
CFG-MSGOUT-NMEA_ID_GGA_I2C	0x209100ba	U1	-	-	Output rate of the NMEA-GX-GGA message on port I2C
CFG-MSGOUT-NMEA_ID_GGA_SPI	0x209100be	U1	-	-	Output rate of the NMEA-GX-GGA message on port SPI
CFG-MSGOUT-NMEA_ID_GGA_UART1	0x209100bb	U1	-	-	Output rate of the NMEA-GX-GGA message on port UART1
CFG-MSGOUT-NMEA_ID_GLL_I2C	0x209100c9	U1	-	-	Output rate of the NMEA-GX-GLL message on port I2C
CFG-MSGOUT-NMEA_ID_GLL_SPI	0x209100cd	U1	-	-	Output rate of the NMEA-GX-GLL message on port SPI
CFG-MSGOUT-NMEA_ID_GLL_UART1	0x209100ca	U1	-	-	Output rate of the NMEA-GX-GLL message on port UART1
CFG-MSGOUT-NMEA_ID_GNS_I2C	0x209100b5	U1	-	-	Output rate of the NMEA-GX-GNS message on port I2C
CFG-MSGOUT-NMEA_ID_GNS_SPI	0x209100b9	U1	-	-	Output rate of the NMEA-GX-GNS message on port SPI

Table 18: CFG-MSGOUT configuration items

4.9.11 CFG-NAVMASK: Satellite Mask Configuration

This can be used to mask out defined satellites to not be used.

The satellites can be specified directly by GNSS system, or when entering a part of sky view in given azimuth and elevation coordinates.

It can be used to block certain portions of sky that are known to introduce signal distortions such as multi-path, etc.

Recommended to be used for receivers that are stationary.

Please note, the satellites may be blocked also by CFG-NAVSPG-INFIL_MINELEV key.

SBAS can be specified using CFG-SBAS-PRNSCANMASK key.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NAVMASK-SV_MASK_GPS	0x50180013	X8	-	-	Satellite mask for the GPS system
Every bit corresponds to a satellite in GPS system. Each bit of a mask corresponds to a satellite with same number: bit 0: reserved bit 1: SV #1 bit 2: SV #2 ... bit 31: SV #31 bit 32: SV #32 bit 33 - 63: reserved The meaning of the bits: 1: SV allowed 0: SV blocked See Table 20 below for a list of possible constants for this item.					
CFG-NAVMASK-SV_MASK_GAL	0x50180014	X8	-	-	Satellite mask for the GALILEO system
Every bit corresponds to a satellite in GALILEO system. Each bit of a mask corresponds to a satellite with same number: bit 0: reserved bit 1: SV #1 bit 2: SV #2 ... bit 35: SV #35 bit 36: SV #36 bit 37 - 63: reserved The meaning of the bits: 1: SV allowed 0: SV blocked See Table 21 below for a list of possible constants for this item.					
CFG-NAVMASK-SV_MASK_BDS	0x50180016	X8	-	-	Satellite mask for the BeiDou system
Every bit corresponds to a satellite in BeiDou system. Each bit of a mask corresponds to a satellite with same number: bit 0: reserved bit 1: SV #1 bit 2: SV #2 ... bit 62: SV #62 bit 63: SV #63 The meaning of the bits: 1: SV allowed 0: SV blocked See Table 22 below for a list of possible constants for this item.					

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NAVMASK-SV_MASK_QZSS	0x50180017	X8	-	-	Satellite mask for the QZSS system
Every bit corresponds to a satellite in QZSS system. Each bit of a mask corresponds to a satellite with same number: bit 0: reserved bit 1: SV #1 bit 2: SV #2 ... bit 9: SV #9 bit 10: SV #10 bit 11 - 63: reserved The meaning of the bits: 1: SV allowed 0: SV blocked See Table 23 below for a list of possible constants for this item.					
CFG-NAVMASK-SV_MASK_NAVIC	0x50180018	X8	-	-	Satellite mask for the NavIC system
Every bit corresponds to a satellite in NavIC system. Each bit of a mask corresponds to a satellite with same number: bit 0: reserved bit 1: SV #1 bit 2: SV #2 ... bit 13: SV #13 bit 14: SV #14 bit 15 - 63: reserved The meaning of the bits: 1: SV allowed 0: SV blocked See Table 24 below for a list of possible constants for this item.

4.9.12 CFG-NAVSPG: Standard precision navigation configuration

This group contains configuration items related to the operation of the receiver at standard precision, including configuring position fix mode, ionospheric model selection and other related items.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NAVSPG-FIXMODE	0x20110011	E1	-	-	Position fix mode
See Table 26 below for a list of possible constants for this item.					
CFG-NAVSPG-INIFIX3D	0x10110013	L	-	-	Initial fix must be a 3D fix
CFG-NAVSPG-WKNROLLOVER	0x30110017	U2	-	-	GPS week rollover number
GPS week numbers are set correctly from this week up to 1024 weeks after this week. The range is from 1 to 4096.					
CFG-NAVSPG-UTCSTANDARD	0x2011001c	E1	-	-	UTC standard to be used
See section GNSS time base in the integration manual. See Table 27 below for a list of possible constants for this item.					
CFG-NAVSPG-DYNMODEL	0x20110021	E1	-	-	Dynamic platform model
See Table 28 below for a list of possible constants for this item.					
CFG-NAVSPG-ACKAIDING	0x10110025	L	-	-	Acknowledge assistance input messages
CFG-NAVSPG-USE_USRDAT	0x10110061	L	-	-	Use user geodetic datum parameters
User specified geodetic system can be used instead of the receiver's default WGS84 ellipsoid. All of the CFG-NAVSPG-USERDAT_* user geodetic datum parameters listed here must be configured before enabling the user specified geodetic system.					
CFG-NAVSPG-USRDAT_MAJA	0x50110062	R8	-	m	Geodetic datum semi-major axis
Accepted range is from 6,300,000.0 to 6,500,000.0 meters					
CFG-NAVSPG-USRDAT_FLAT	0x50110063	R8	-	-	Geodetic datum 1.0 / flattening
Accepted range is 0.0 to 500.0.					
CFG-NAVSPG-USRDAT_DX	0x40110064	R4	-	m	Geodetic datum X axis shift at the origin
Accepted range is +/- 5000.0 meters.					
CFG-NAVSPG-USRDAT_DY	0x40110065	R4	-	m	Geodetic datum Y axis shift at the origin
Accepted range is +/- 5000.0 meters.					
CFG-NAVSPG-USRDAT_DZ	0x40110066	R4	-	m	Geodetic datum Z axis shift at the origin
Accepted range is +/- 5000.0 meters.					
CFG-NAVSPG-USRDAT_ROTX	0x40110067	R4	-	arcsec	Geodetic datum rotation about the X axis
Accepted range is +/- 20.0 milli arc seconds.					
CFG-NAVSPG-USRDAT_ROTY	0x40110068	R4	-	arcsec	Geodetic datum rotation about the Y axis ()
Accepted range is +/- 20.0 milli-arc seconds.					
CFG-NAVSPG-USRDAT_ROTZ	0x40110069	R4	-	arcsec	Geodetic datum rotation about the Z axis
Accepted range is +/- 20.0 milli-arc seconds.					
CFG-NAVSPG-USRDAT_SCALE	0x4011006a	R4	-	ppm	Geodetic datum scale factor
Accepted range is 0.0 to 50.0 parts per million.					
CFG-NAVSPG-INFIL_MINSVS	0x201100a1	U1	-	-	Minimum number of satellites for navigation

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NAVSPG-INFIL_MAXSVS	0x201100a2	U1	-	-	Maximum number of satellites for navigation
CFG-NAVSPG-INFIL_MINCNO	0x201100a3	U1	-	dBHz	Minimum satellite signal level for navigation
CFG-NAVSPG-INFIL_MINELEV	0x201100a4	I1	-	deg	Minimum elevation for a GNSS satellite to be used in navigation
CFG-NAVSPG-INFIL_NCNOTHRS	0x201100aa	U1	-	-	Number of satellites required to have C/N0 above CFG-NAVSPG-INFIL_CNOTHRS for a fix to be attempted
CFG-NAVSPG-INFIL_CNOTHRS	0x201100ab	U1	-	-	C/N0 threshold for deciding whether to attempt a fix
CFG-NAVSPG-OUTFIL_PDOP	0x301100b1	U2	0.1	-	Output filter position DOP mask (threshold)
CFG-NAVSPG-OUTFIL_TDOP	0x301100b2	U2	0.1	-	Output filter time DOP mask (threshold)
CFG-NAVSPG-OUTFIL_PACC	0x301100b3	U2	-	m	Output filter position accuracy mask (threshold)
CFG-NAVSPG-OUTFIL_TACC	0x301100b4	U2	-	m	Output filter time accuracy mask (threshold)
CFG-NAVSPG-OUTFIL_FACC	0x301100b5	U2	0.01	m/s	Output filter frequency accuracy mask (threshold)
CFG-NAVSPG-CONSTR_ALT	0x401100c1	I4	0.01	m	Fixed altitude (mean sea level) for 2D fix mode
CFG-NAVSPG-CONSTR_ALTVAR	0x401100c2	U4	0.0001	m^2	Fixed altitude variance for 2D mode
CFG-NAVSPG-CONSTR_DGNSSTO	0x201100c4	U1	-	s	DGNSS timeout
CFG-NAVSPG-SIGATTCOMP	0x201100d6	E1	-	-	Permanently attenuated signal compensation mode
See Table 29 below for a list of possible constants for this item.					
CFG-NAVSPG-PL_ENA	0x101100d7	L	-	-	Enable Protection level
If enabled, protection level computing is on.					

Table 25: CFG-NAVSPG configuration items

Constant	Value	Description
2DONLY	1	2D only
3DONLY	2	3D only
AUTO	3	Auto 2D/3D

Table 26: Constants for CFG-NAVSPG-FIXMODE

Constant	Value	Description
AUTO	0	Automatic; receiver selects based on GNSS configuration
USNO	3	UTC as operated by the U.S. Naval Observatory (USNO); derived from GPS time
EU	5	UTC as combined from multiple European laboratories; derived from Galileo time
SU	6	UTC as operated by the former Soviet Union (SU); derived from GLONASS time
NTSC	7	UTC as operated by the National Time Service Center (NTSC), China; derived from BeiDou time
NPLI	8	UTC as operated by the National Physics Laboratory, India (NPLI); derived from NavIC time
NICT	9	UTC as operated by the National Institute of Information and Communications Technology, Japan (NICT); derived from QZSS time

Table 27: Constants for CFG-NAVSPG-UTCSTANDARD

Constant	Value	Description
PORT	0	Portable
STAT	2	Stationary
PED	3	Pedestrian
AUTOMOT	4	Automotive
SEA	5	Sea
AIR1	6	Airborne with <1g acceleration
AIR2	7	Airborne with <2g acceleration
AIR4	8	Airborne with <4g acceleration
WRIST	9	Wrist-worn watch (not available in all products)
BIKE	10	Motorbike (not available in all products)
MOWER	11	Robotic lawn mower (not available in all products)
ESCOOTER	12	E-scooter (not available in all products)

Table 28: Constants for CFG-NAVSPG-DYNMODEL

Constant	Value	Description
DIS	0	Disable signal attenuation compensation
AUTO	255	Automatic signal attenuation compensation
01DBHZ	1	Maximum expected C/NO level is 1 dBHz
02DBHZ	2	Maximum expected C/NO level is 2 dBHz
03DBHZ	3	Maximum expected C/NO level is 3 dBHz
04DBHZ	4	Maximum expected C/NO level is 4 dBHz
05DBHZ	5	Maximum expected C/NO level is 5 dBHz
06DBHZ	6	Maximum expected C/NO level is 6 dBHz
07DBHZ	7	Maximum expected C/NO level is 7 dBHz
08DBHZ	8	Maximum expected C/NO level is 8 dBHz
09DBHZ	9	Maximum expected C/NO level is 9 dBHz
10DBHZ	10	Maximum expected C/NO level is 10 dBHz
11DBHZ	11	Maximum expected C/NO level is 11 dBHz
12DBHZ	12	Maximum expected C/NO level is 12 dBHz
13DBHZ	13	Maximum expected C/NO level is 13 dBHz
14DBHZ	14	Maximum expected C/NO level is 14 dBHz
15DBHZ	15	Maximum expected C/NO level is 15 dBHz
16DBHZ	16	Maximum expected C/NO level is 16 dBHz
17DBHZ	17	Maximum expected C/NO level is 17 dBHz
18DBHZ	18	Maximum expected C/NO level is 18 dBHz
19DBHZ	19	Maximum expected C/NO level is 19 dBHz
20DBHZ	20	Maximum expected C/NO level is 20 dBHz
21DBHZ	21	Maximum expected C/NO level is 21 dBHz
22DBHZ	22	Maximum expected C/NO level is 22 dBHz
23DBHZ	23	Maximum expected C/NO level is 23 dBHz
24DBHZ	24	Maximum expected C/NO level is 24 dBHz

Constant	Value	Description
25DBHZ	25	Maximum expected C/NO level is 25 dBHz
26DBHZ	26	Maximum expected C/NO level is 26 dBHz
27DBHZ	27	Maximum expected C/NO level is 27 dBHz
28DBHZ	28	Maximum expected C/NO level is 28 dBHz
29DBHZ	29	Maximum expected C/NO level is 29 dBHz
30DBHZ	30	Maximum expected C/NO level is 30 dBHz
31DBHZ	31	Maximum expected C/NO level is 31 dBHz
32DBHZ	32	Maximum expected C/NO level is 32 dBHz
33DBHZ	33	Maximum expected C/NO level is 33 dBHz
34DBHZ	34	Maximum expected C/NO level is 34 dBHz
35DBHZ	35	Maximum expected C/NO level is 35 dBHz
36DBHZ	36	Maximum expected C/NO level is 36 dBHz
37DBHZ	37	Maximum expected C/NO level is 37 dBHz
38DBHZ	38	Maximum expected C/NO level is 38 dBHz
39DBHZ	39	Maximum expected C/NO level is 39 dBHz
40DBHZ	40	Maximum expected C/NO level is 40 dBHz
41DBHZ	41	Maximum expected C/NO level is 41 dBHz
42DBHZ	42	Maximum expected C/NO level is 42 dBHz
43DBHZ	43	Maximum expected C/NO level is 43 dBHz
44DBHZ	44	Maximum expected C/NO level is 44 dBHz
45DBHZ	45	Maximum expected C/NO level is 45 dBHz
46DBHZ	46	Maximum expected C/NO level is 46 dBHz
47DBHZ	47	Maximum expected C/NO level is 47 dBHz
48DBHZ	48	Maximum expected C/NO level is 48 dBHz
49DBHZ	49	Maximum expected C/NO level is 49 dBHz
50DBHZ	50	Maximum expected C/NO level is 50 dBHz
51DBHZ	51	Maximum expected C/NO level is 51 dBHz
52DBHZ	52	Maximum expected C/NO level is 52 dBHz
53DBHZ	53	Maximum expected C/NO level is 53 dBHz
54DBHZ	54	Maximum expected C/NO level is 54 dBHz
55DBHZ	55	Maximum expected C/NO level is 55 dBHz
56DBHZ	56	Maximum expected C/NO level is 56 dBHz
57DBHZ	57	Maximum expected C/NO level is 57 dBHz
58DBHZ	58	Maximum expected C/NO level is 58 dBHz
59DBHZ	59	Maximum expected C/NO level is 59 dBHz
60DBHZ	60	Maximum expected C/NO level is 60 dBHz
61DBHZ	61	Maximum expected C/NO level is 61 dBHz
62DBHZ	62	Maximum expected C/NO level is 62 dBHz

Constant	Value	Description
63DBHZ	63	Maximum expected C/NO level is 63 dBHz

Table 29: Constants for CFG-NAVSPG-SIGATTCOMP

4.9.13 CFG-NMEA: NMEA protocol configuration

This group configures the NMEA protocol. See section NMEA protocol configuration for a detailed description of the configuration effects on NMEA output.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NMEA-PROTVER	0x20930001	E1	-	-	NMEA protocol version
See Table 31 below for a list of possible constants for this item.					
CFG-NMEA-MAXSVS	0x20930002	E1	-	-	Maximum number of SVs to report per Talker ID
See Table 32 below for a list of possible constants for this item.					
CFG-NMEA-COMPAT	0x10930003	L	-	-	Enable compatibility mode
This might be needed for certain applications, e.g. for an NMEA parser that expects a fixed number of digits in position coordinates.					
CFG-NMEA-CONSIDER	0x10930004	L	-	-	Enable considering mode
This affects the way the used satellite count in NMEA output is calculated. If set, also considered but rejected satellites (e.g. RAIMED) are counted as used satellites as well.					
CFG-NMEA-LIMIT82	0x10930005	L	-	-	Enable strict limit to 82 characters maximum NMEA message length
CFG-NMEA-HIGHPREC	0x10930006	L	-	-	Enable high precision mode
This flag cannot be set in conjunction with either CFG-NMEA-COMPAT or CFG-NMEA-LIMIT82 mode.					
CFG-NMEA-SVNUMBERING	0x20930007	E1	-	-	Display configuration for SVs that do not have value defined in NMEA
Configures the display of satellites that do not have an NMEA-defined value. Note: this does not apply to satellites with an unknown ID. See also Satellite Numbering. See Table 33 below for a list of possible constants for this item.					
CFG-NMEA-FILT_GPS	0x10930011	L	-	-	Disable reporting of GPS satellites
CFG-NMEA-FILT_SBAS	0x10930012	L	-	-	Disable reporting of SBAS satellites
CFG-NMEA-FILT_GAL	0x10930013	L	-	-	Disable reporting of Galileo satellites
CFG-NMEA-FILT_QZSS	0x10930015	L	-	-	Disable reporting of QZSS satellites
CFG-NMEA-FILT_BDS	0x10930017	L	-	-	Disable reporting of BeiDou satellites
CFG-NMEA-FILT_NAVIC	0x10930018	L	-	-	Disable reporting of NavIC satellites
CFG-NMEA-OUT_INVFIX	0x10930021	L	-	-	Enable position output for failed or invalid fixes
CFG-NMEA-OUT_MSKFIX	0x10930022	L	-	-	Enable position output for invalid fixes
CFG-NMEA-OUT_INVTIME	0x10930023	L	-	-	Enable time output for invalid times
CFG-NMEA-OUT_INVDATE	0x10930024	L	-	-	Enable date output for invalid dates
CFG-NMEA-OUT_ONLYGPS	0x10930025	L	-	-	Restrict output to GPS satellites only
CFG-NMEA-OUT_FROZENCOG	0x10930026	L	-	-	Enable course over ground output even if it is frozen
CFG-NMEA-MAINTALKERID	0x20930031	E1	-	-	Main Talker ID
By default the main Talker ID (i.e. the Talker ID used for all messages other than GSV) is determined by the GNSS assignment of the receiver's channels (see CFG-SIGNAL). This field enables the main Talker ID to be overridden. See Table 34 below for a list of possible constants for this item.					

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-NMEA-GSVTALKERID	0x20930032	E1	-	-	Talker ID for GSV NMEA messages
By default the Talker ID for GSV messages is GNSS-specific (as defined by NMEA). This field enables the GSV Talker ID to be overridden. See Table 35 below for a list of possible constants for this item.					
CFG-NMEA-BDSTALKERID	0x30930033	U2	-	-	BeiDou Talker ID
Sets the two ASCII characters that should be used for the BeiDou Talker ID. If these are set to zero, the receiver uses the default BeiDou Talker ID.					

Table 30: CFG-NMEA configuration items

Constant	Value	Description
V21	21	NMEA protocol version 2.1
V23	23	NMEA protocol version 2.3
V40	40	NMEA protocol version 4.0 (not available in all products)
V41	41	NMEA protocol version 4.10 (not available in all products)
V411	42	NMEA protocol version 4.11 (not available in all products)

Table 31: Constants for CFG-NMEA-PROTVER

Constant	Value	Description
UNLIM	0	Unlimited
8SVS	8	8 SVs
12SVS	12	12 SVs
16SVS	16	16 SVs

Table 32: Constants for CFG-NMEA-MAXSVS

Constant	Value	Description
STRICT	0	Strict - satellites are not output
EXTENDED	1	Extended - use proprietary numbering

Table 33: Constants for CFG-NMEA-SVNUMBERING

Constant	Value	Description
AUTO	0	Main Talker ID is not overridden
GP	1	Set main Talker ID to 'GP'
GL	2	Set main Talker ID to 'GL'
GN	3	Set main Talker ID to 'GN'
GA	4	Set main Talker ID to 'GA' (not available in all products)
GB	5	Set main Talker ID to 'GB' (not available in all products)
GQ	7	Set main Talker ID to 'GQ' (not available in all products)

Table 34: Constants for CFG-NMEA-MAINTALKERID

Constant	Value	Description
GNSS	0	Use GNSS-specific Talker ID (as defined by NMEA)

Constant	Value	Description
MAIN	1	Use the main Talker ID

Table 35: Constants for CFG-NMEA-GSVTALKERID

4.9.14 CFG-ODO: Odometer and low-speed course over ground filter configuration

The items in this group allow the user to configure the Odometer feature and Low-Speed Course Over Ground Filter.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-ODO-USE_ODO	0x10220001	L	-	-	Use odometer
CFG-ODO-USE_COG	0x10220002	L	-	-	Use low-speed course over ground filter
CFG-ODO-OUTLPVEL	0x10220003	L	-	-	Output low-pass filtered velocity
CFG-ODO-OUTLPCOG	0x10220004	L	-	-	Output low-pass filtered course over ground (heading)
CFG-ODO-PROFILE	0x20220005	E1	-	-	Odometer profile configuration See Table 37 below for a list of possible constants for this item.
CFG-ODO-COGMAXSPEED	0x20220021	U1	1e-1	m/s	Upper speed limit for low-speed course over ground filter
CFG-ODO-COGMAXPOSACC	0x20220022	U1	-	-	Maximum acceptable position accuracy for computing low-speed filtered course over ground
CFG-ODO-VELLPGAIN	0x20220031	U1	-	-	Velocity low-pass filter level Range is from 0 to 255.
CFG-ODO-COGLPGAIN	0x20220032	U1	-	-	Course over ground low-pass filter level (at speed < 8 m/s) Range is from 0 to 255.

Table 36: CFG-ODO configuration items

Constant	Value	Description
RUN	0	Running
CYCL	1	Cycling
SWIM	2	Swimming
CAR	3	Car
CUSTOM	4	Custom

Table 37: Constants for CFG-ODO-PROFILE

4.9.15 CFG-QZSS: QZSS system configuration

Note that enabling and disabling of individual GNSS is done via the CFG-SIGNAL configuration group.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-QZSS-USE_SLAS_DGNSS	0x10370005	L	-	-	Apply QZSS SLAS DGNSS corrections
CFG-QZSS-USE_SLAS_TESTMODE	0x10370006	L	-	-	Use QZSS SLAS data when it is in test mode (SLAS msg 0)
CFG-QZSS-USE_SLAS_RAIM_UNCORR	0x10370007	L	-	-	Raim out measurements that are not corrected by QZSS SLAS, if at least 5 measurements are corrected
CFG-QZSS-SLAS_MAX_BASELINE	0x30370008	U2	-	km	Maximum baseline distance to closest GMS

Configuration item	Key ID	Type	Scale	Unit	Description
SLAS corrections are only applied if the receiver is at most this far away from the closest ground monitoring station (GMS). Note that due to the nature of the service, the usefulness of corrections degrades with distance. When far away from GMS, SBAS may be a better correction source.					

Table 38: CFG-QZSS configuration items

4.9.16 CFG-RATE: Navigation and measurement rate configuration

The configuration items in this group allow the user to alter the rate at which navigation solutions (and the measurements that they depend on) are generated by the receiver. The calculation of the navigation solution is aligned to the top of a second zero (first second of the week) of the configured reference time system. The navigation period is an integer multiple of the measurement period.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-RATE-MEAS	0x30210001	U2	0.001	s	Nominal time between GNSS measurements
E.g. 100 ms results in 10 Hz measurement rate, 1000 ms = 1 Hz measurement rate.					
CFG-RATE-NAV	0x30210002	U2	-	-	Ratio of number of measurements to number of navigation solutions
E.g. 5 means five measurements for every navigation solution. The minimum value is 1. The maximum value is 127.					
CFG-RATE-TIMEREF	0x20210003	E1	-	-	Time system to which measurements are aligned
See Table 40 below for a list of possible constants for this item.					

Table 39: CFG-RATE configuration items

Constant	Value	Description
UTC	0	Align measurements to UTC time
GPS	1	Align measurements to GPS time
GLO	2	Align measurements to GLONASS time
BDS	3	Align measurements to BeiDou time
GAL	4	Align measurements to Galileo time
NAVIC	5	Align measurements to NavIC time

Table 40: Constants for CFG-RATE-TIMEREF

4.9.17 CFG-RINV: Remote inventory

The remote inventory enables storing user-defined data in the receiver's non-volatile memory. The data can be either binary or a string of ASCII characters. In the latter case, it can optionally be output at startup after the boot screen.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-RINV-DUMP	0x10c70001	L	-	-	Dump data at startup
When true, data is dumped to the interface at startup, unless CFG-RINV-BINARY is set.					
CFG-RINV-BINARY	0x10c70002	L	-	-	Data is binary
When true, the data is treated as binary data.					
CFG-RINV-DATA_SIZE	0x20c70003	U1	-	-	Size of data
Size of data to store/stored in the remote inventory (maximum 30 bytes).					
CFG-RINV-CHUNK0	0x50c70004	X8	-	-	Data bytes 1-8 (LSB)
Data to store/stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.					
CFG-RINV-CHUNK1	0x50c70005	X8	-	-	Data bytes 9-16
Data to store/stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.					

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-RINV-CHUNK2	0x50c70006	X8	-	-	Data bytes 17-24
Data to store/stored in remote inventory - max 8 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.					
CFG-RINV-CHUNK3	0x50c70007	X8	-	-	Data bytes 25-30 (MSB)
Data to store/stored in remote inventory - max 6 bytes, left-most in LSB, e.g. string ABCD will appear as 0x44434241.					

Table 41: CFG-RINV configuration items

4.9.18 CFG-SBAS: SBAS configuration

This group configures the SBAS receiver subsystem (i.e. WAAS, EGNOS, MSAS). See SBAS configuration settings description in the integration manual for a detailed description of how these settings affect receiver operation.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SBAS-USE_TESTMODE	0x10360002	L	-	-	Use SBAS data when it is in test mode (SBAS msg 0)
CFG-SBAS-USE_RANGING	0x10360003	L	-	-	Use SBAS GEOs as a ranging source (for navigation)
CFG-SBAS-USE_DIFFCORR	0x10360004	L	-	-	Use SBAS differential corrections
CFG-SBAS-USE_INTEGRITY	0x10360005	L	-	-	Use SBAS integrity information
If enabled, the receiver uses only GPS satellites for which integrity information is available					
CFG-SBAS-ACCEPT_NOT_IN_PRNMASK	0x30360008	X2	-	-	Accept corrections from SBAS SV, even if not self included in PRN MASK (Message Type 1)
If enabled, the receiver will still use the SBAS data, even when the SBAS SV itself is not included in its PRN MASK. This is only useful for BDSBAS and not compatible whith current EGNOS implementation. See Table 43 below for a list of possible constants for this item.					
CFG-SBAS-USE_IONOONLY	0x10360007	L	-	-	Use SBAS ionosphere correction only
CFG-SBAS-PRNSCANMASK	0x50360006	X8	-	-	SBAS PRN search configuration
This configuration item determines which SBAS PRNs should be searched. Setting it to 0 indicates auto-scanning all SBAS PRNs. For non-zero values the bits correspond to the allocated SBAS PRNs ranging from PRN120 (bit 0) to PRN158 (bit 38), where a bit set enables searching for the corresponding PRN. See Table 44 below for a list of possible constants for this item.					

Table 42: CFG-SBAS configuration items

Constant	Value	Description
WAAS	0x01	WAAS bit
1 = Use WAAS provider Id.		
EGNOS	0x02	EGNOS bit
1 = Use EGNOS provider Id.		
MSAS	0x04	MSAS bit
1 = Use MSAS provider Id.		
GAGAN	0x08	GAGAN bit
1 = Use GAGAN provider Id.		
SDCM	0x10	SDCM bit
1 = Use SDCM provider Id.		
BDSBAS	0x20	BDSBAS bit
1 = Use BDSBAS provider Id.		
KASS	0x40	KASS bit

Constant	Value	Description
1 = Use KASS provider Id.		

Table 43: Constants for CFG-SBAS-ACCEPT_NOT_IN_PRNMASK

Constant	Value	Description
ALL	0x0000000000000000	Enable search for all SBAS PRNs
PRN120	0x0000000000000001	Enable search for SBAS PRN120
PRN121	0x0000000000000002	Enable search for SBAS PRN121
PRN122	0x0000000000000004	Enable search for SBAS PRN122
PRN123	0x0000000000000008	Enable search for SBAS PRN123
PRN124	0x0000000000000010	Enable search for SBAS PRN124
PRN125	0x0000000000000020	Enable search for SBAS PRN125
PRN126	0x0000000000000040	Enable search for SBAS PRN126
PRN127	0x0000000000000080	Enable search for SBAS PRN127
PRN128	0x0000000000000100	Enable search for SBAS PRN128
PRN129	0x0000000000000200	Enable search for SBAS PRN129
PRN130	0x0000000000000400	Enable search for SBAS PRN130
PRN131	0x0000000000000800	Enable search for SBAS PRN131
PRN132	0x0000000000001000	Enable search for SBAS PRN132
PRN133	0x0000000000002000	Enable search for SBAS PRN133
PRN134	0x0000000000004000	Enable search for SBAS PRN134
PRN135	0x0000000000008000	Enable search for SBAS PRN135
PRN136	0x0000000000010000	Enable search for SBAS PRN136
PRN137	0x0000000000020000	Enable search for SBAS PRN137
PRN138	0x0000000000040000	Enable search for SBAS PRN138
PRN139	0x0000000000080000	Enable search for SBAS PRN139
PRN140	0x0000000000100000	Enable search for SBAS PRN140
PRN141	0x0000000000200000	Enable search for SBAS PRN141
PRN142	0x0000000000400000	Enable search for SBAS PRN142
PRN143	0x0000000000800000	Enable search for SBAS PRN143
PRN144	0x0000000001000000	Enable search for SBAS PRN144
PRN145	0x0000000002000000	Enable search for SBAS PRN145
PRN146	0x0000000004000000	Enable search for SBAS PRN146
PRN147	0x0000000008000000	Enable search for SBAS PRN147
PRN148	0x0000000010000000	Enable search for SBAS PRN148
PRN149	0x0000000020000000	Enable search for SBAS PRN149
PRN150	0x0000000040000000	Enable search for SBAS PRN150
PRN151	0x0000000080000000	Enable search for SBAS PRN151
PRN152	0x0000000100000000	Enable search for SBAS PRN152
PRN153	0x0000000200000000	Enable search for SBAS PRN153
PRN154	0x0000000400000000	Enable search for SBAS PRN154
PRN155	0x0000000800000000	Enable search for SBAS PRN155

Constant	Value	Description
PRN156	0x0000001000000000	Enable search for SBAS PRN156
PRN157	0x0000002000000000	Enable search for SBAS PRN157
PRN158	0x0000004000000000	Enable search for SBAS PRN158

Table 44: Constants for CFG-SBAS-PRNSCANMASK

4.9.19 CFG-SEC: Security configuration

Security configuration.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SEC-CFG_LOCK	0x10f60009	L	-	-	Configuration lockdown
When set, the receiver configuration is locked and cannot be changed any more.					
CFG-SEC-CFG_LOCK_UNLOCKGRP1	0x30f6000a	U2	-	-	Configuration lockdown exempted group 1
This item can be set before enabling the configuration lockdown. It enables writing to the specified group even after the configuration lockdown has been enabled.					
CFG-SEC-CFG_LOCK_UNLOCKGRP2	0x30f6000b	U2	-	-	Configuration lockdown exempted group 2
This item can be set before enabling the configuration lockdown. It enables writing to the specified group even after the configuration lockdown has been enabled.					

Table 45: CFG-SEC configuration items

4.9.20 CFG-SIGNAL: Satellite systems (GNSS) signal configuration

The enable items for individual signals are governed by their corresponding constellation enable item. It is necessary that at least one signal from a major GNSS constellation is enabled. See GNSS signal configuration in the integration manual for more details.

Configuration specific to a GNSS system is available in other groups (e.g. CFG-SBAS).

Note that changes to any items within this group triggers a reset to the GNSS subsystem. The reset takes some time, so wait first for the acknowledgement from the receiver and then 0.5 seconds before sending the next command.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SIGNAL-GPS_ENA	0x1031001f	L	-	-	GPS enable
CFG-SIGNAL-GPS_L1CA_ENA	0x10310001	L	-	-	GPS L1C/A
CFG-SIGNAL-GPS_L5_ENA	0x10310004	L	-	-	GPS L5
CFG-SIGNAL-SBAS_ENA	0x10310020	L	-	-	SBAS enable
CFG-SIGNAL-SBAS_L1CA_ENA	0x10310005	L	-	-	SBAS L1C/A
CFG-SIGNAL-GAL_ENA	0x10310021	L	-	-	Galileo enable
CFG-SIGNAL-GAL_E1_ENA	0x10310007	L	-	-	Galileo E1
CFG-SIGNAL-GAL_E5A_ENA	0x10310009	L	-	-	Galileo E5a
CFG-SIGNAL-BDS_ENA	0x10310022	L	-	-	BeiDou Enable
CFG-SIGNAL-BDS_B1_ENA	0x1031000d	L	-	-	BeiDou B1I
CFG-SIGNAL-BDS_B1C_ENA	0x1031000f	L	-	-	BeiDou B1C
CFG-SIGNAL-BDS_B2A_ENA	0x10310028	L	-	-	BeiDou B2a
CFG-SIGNAL-QZSS_ENA	0x10310024	L	-	-	QZSS enable
CFG-SIGNAL-QZSS_L1CA_ENA	0x10310012	L	-	-	QZSS L1C/A
CFG-SIGNAL-QZSS_L1S_ENA	0x10310014	L	-	-	QZSS L1S

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SIGNAL-QZSS_L5_ENA	0x10310017	L	-	-	QZSS L5
CFG-SIGNAL-NAVIC_ENA	0x10310026	L	-	-	NavIC enable
CFG-SIGNAL-NAVIC_L5_ENA	0x1031001d	L	-	-	NavIC L5

Table 46: CFG-SIGNAL configuration items

4.9.21 CFG-SPI: Configuration of the SPI interface

Settings needed to configure the SPI communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SPI-MAXFF	0x20640001	U1	-	-	Number of bytes containing 0xFF to receive before switching off reception. Range: 0 (mechanism off) - 63
CFG-SPI-CPOLARITY	0x10640002	L	-	-	Clock polarity select: 0: Active Hight Clock, SCLK idles low, 1: Active Low Clock, SCLK idles high
CFG-SPI-CPHASE	0x10640003	L	-	-	Clock phase select: 0: Data captured on first edge of SCLK, 1: Data captured on second edge of SCLK
CFG-SPI-EXTENDEDTIMEOUT	0x10640005	L	-	-	Flag to disable timeouting the interface after 1.5s
CFG-SPI-ENABLED	0x10640006	L	-	-	Flag to indicate if the SPI interface should be enabled

Table 47: CFG-SPI configuration items

4.9.22 CFG-SPIINPROT: Input protocol configuration of the SPI interface

Input protocol enable flags of the SPI interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SPIINPROT-UBX	0x10790001	L	-	-	Flag to indicate if UBX should be an input protocol on SPI
CFG-SPIINPROT-NMEA	0x10790002	L	-	-	Flag to indicate if NMEA should be an input protocol on SPI

Table 48: CFG-SPIINPROT configuration items

4.9.23 CFG-SPIOUTPROT: Output protocol configuration of the SPI interface

Output protocol enable flags of the SPI interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-SPIOUTPROT-UBX	0x107a0001	L	-	-	Flag to indicate if UBX should be an output protocol on SPI
CFG-SPIOUTPROT-NMEA	0x107a0002	L	-	-	Flag to indicate if NMEA should be an output protocol on SPI

Table 49: CFG-SPIOUTPROT configuration items

4.9.24 CFG-TP: Time pulse configuration

Use this group to configure the generation of time pulses.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-TP-PULSE_DEF	0x20050023	E1	-	-	Determines whether the time pulse is interpreted as frequency or period

See Table 51 below for a list of possible constants for this item.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-TP-PULSE_LENGTH_DEF	0x20050030	E1	-	-	Determines whether the time pulse length is interpreted as length[us] or pulse ratio[%]
See Table 52 below for a list of possible constants for this item.					
CFG-TP-ANT_CABLEDELAY	0x30050001	I2	1e-9	s	Antenna cable delay in [ns]
CFG-TP-PERIOD_TP1	0x40050002	U4	1e-6	s	Time pulse period (TP1) in [us]
This is used only if CFG-TP-PULSE_DEF=PERIOD.					
CFG-TP-PERIOD_LOCK_TP1	0x40050003	U4	1e-6	s	Time pulse period when locked to GNSS time (TP1) in [us]
Only used if CFG-TP-PULSE_DEF=PERIOD and CFG-TP-USE_LOCKED_TP1 is set.					
CFG-TP-FREQ_TP1	0x40050024	U4	-	Hz	Time pulse frequency (TP1) in [Hz]
This is used only if CFG-TP-PULSE_DEF=FREQ.					
CFG-TP-FREQ_LOCK_TP1	0x40050025	U4	-	Hz	Time pulse frequency when locked to GNSS time (TP1) in [Hz]
Only used if CFG-TP-PULSE_DEF=FREQ and CFG-TP-USE_LOCKED_TP1 is set.					
CFG-TP-LEN_TP1	0x40050004	U4	1e-6	s	Time pulse length (TP1) in [us]
Only used if CFG-TP-PULSE_LENGTH_DEF=LENGTH is set.					
CFG-TP-LEN_LOCK_TP1	0x40050005	U4	1e-6	s	Time pulse length when locked to GNSS time (TP1) in [us]
Only used if CFG-TP-PULSE_LENGTH_DEF=LENGTH and CFG-TP-USE_LOCKED_TP1 is set.					
CFG-TP-DUTY_TP1	0x5005002a	R8	-	%	Time pulse duty cycle (TP1) in [%]
Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO is set.					
CFG-TP-DUTY_LOCK_TP1	0x5005002b	R8	-	%	Time pulse duty cycle when locked to GNSS time (TP1) in [%]
Only used if CFG-TP-PULSE_LENGTH_DEF=RATIO and CFG-TP-USE_LOCKED_TP1 are set.					
CFG-TP-USER_DELAY_TP1	0x40050006	I4	1e-9	s	User-configurable time pulse delay (TP1) in [ns]
CFG-TP-TP1_ENA	0x10050007	L	-	-	Enable the time pulse (TP1)
if pin associated with time pulse is assigned for another function, the other function takes precedence. Must be set for frequency-time products.					
CFG-TP-SYNC_GNSS_TP1	0x10050008	L	-	-	Sync time pulse to GNSS time or local clock (TP1)
If set, sync to GNSS if GNSS time is valid. Otherwise, use local clock. This flag can be unset only in Timing product variants.					
CFG-TP-USE_LOCKED_TP1	0x10050009	L	-	-	Use locked parameters when possible (TP1)
If set, use CFG-TP-PERIOD_LOCK_TP1 and CFG-TP-LEN_LOCK_TP1 as soon as GNSS time is valid. Otherwise, use CFG-TP-PERIOD_TP1 and CFG-TP-LEN_TP1.					
CFG-TP-ALIGN_TO_TOW_TP1	0x1005000a	L	-	-	Align time pulse to top of second (TP1)
To use this feature, CFG-TP-SYNC_GNSS_TP1 must be set. Time pulse period must be an integer fraction of 1 second.					
CFG-TP-POL_TP1	0x1005000b	L	-	-	Set time pulse polarity (TP1)
false (0) : falling edge at top of second. true (1) : rising edge at top of second.					
CFG-TP-TIMEGRID_TP1	0x2005000c	E1	-	-	Time grid to use (TP1)

Configuration item	Key ID	Type	Scale	Unit	Description
Only relevant if CFG-TP-SYNC_GNSS_TP1 is set. Note that configured GNSS time is estimated by the receiver if locked to any GNSS system. If the receiver has a valid GNSS fix it attempts to steer the TP to the specified time grid even if the specified time is not based on information from the constellation's satellites. To ensure timing based purely on a given GNSS, restrict the supported constellations in CFG-SIGNAL-*. No TP is generated if the selected GNSS constellation is not configured. See Table 53 below for a list of possible constants for this item.					
CFG-TP-DRSTR_TP1	0x20050035	E1	-	-	Set drive strength of TP1
Time Pulse pin 1 (TP1) can support 4 possible drive strength cases: 2, 4, 8 and 12 mA See Table 54 below for a list of possible constants for this item.					

Table 50: CFG-TP configuration items

Constant	Value	Description
PERIOD	0	Time pulse period [us]
FREQ	1	Time pulse frequency [Hz]

Table 51: Constants for CFG-TP-PULSE_DEF

Constant	Value	Description
RATIO	0	Time pulse ratio
LENGTH	1	Time pulse length

Table 52: Constants for CFG-TP-PULSE_LENGTH_DEF

Constant	Value	Description
UTC	0	UTC time reference
GPS	1	GPS time reference
GLO	2	GLONASS time reference
BDS	3	BeiDou time reference
GAL	4	Galileo time reference
NAVIC	5	NavIC time reference

Table 53: Constants for CFG-TP-TIMEGRID_TP1

Constant	Value	Description
DRIVE_STRENGTH_2MA	0	2 mA drive strength
DRIVE_STRENGTH_4MA	1	4 mA drive strength
DRIVE_STRENGTH_8MA	2	8 mA drive strength
DRIVE_STRENGTH_12MA	3	12 mA drive strength

Table 54: Constants for CFG-TP-DRSTR_TP1

4.9.25 CFG-TXREADY: TX ready configuration

Configuration of the TX ready pin.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-TXREADY-ENABLED	0x10a20001	L	-	-	Flag to indicate if TX ready pin mechanism should be enabled
CFG-TXREADY-POLARITY	0x10a20002	L	-	-	The polarity of the TX ready pin: false:high-active, true:low-active
CFG-TXREADY-PIN	0x20a20003	U1	-	-	Pin number to use for the TX ready functionality

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-TXREADY-THRESHOLD	0x30a20004	U2	-	-	Amount of data that should be ready on the interface before triggering the TX ready pin
The value is amount of 8-byte chunks. For example, value of 250 sets the trigger to 2000 bytes.					
CFG-TXREADY-INTERFACE	0x20a20005	E1	-	-	Interface where the TX ready feature should be linked to
See Table 56 below for a list of possible constants for this item.					

Table 55: CFG-TXREADY configuration items

Constant	Value	Description
I2C	0	I2C interface
SPI	1	SPI interface

Table 56: Constants for CFG-TXREADY-INTERFACE

4.9.26 CFG-UART1: Configuration of the UART1 interface

Settings needed to configure the UART1 communication interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-UART1-BAUDRATE	0x40520001	U4	-	-	The baud rate that should be configured on the UART1
CFG-UART1-STOPBITS	0x20520002	E1	-	-	Number of stopbits that should be used on UART1
See Table 58 below for a list of possible constants for this item.					
CFG-UART1-DATABITS	0x20520003	E1	-	-	Number of databits that should be used on UART1
See Table 59 below for a list of possible constants for this item.					
CFG-UART1-PARITY	0x20520004	E1	-	-	Parity mode that should be used on UART1
See Table 60 below for a list of possible constants for this item.					
CFG-UART1-ENABLED	0x10520005	L	-	-	Flag to indicate if the UART1 should be enabled

Table 57: CFG-UART1 configuration items

Constant	Value	Description
HALF	0	0.5 stopbits
ONE	1	1.0 stopbits
ONEHALF	2	1.5 stopbits
TWO	3	2.0 stopbits

Table 58: Constants for CFG-UART1-STOPBITS

Constant	Value	Description
EIGHT	0	8 databits
SEVEN	1	7 databits

Table 59: Constants for CFG-UART1-DATABITS

Constant	Value	Description
NONE	0	No parity bit
ODD	1	Add an odd parity bit

Constant	Value	Description
EVEN	2	Add an even parity bit

Table 60: Constants for CFG-UART1-PARITY

4.9.27 CFG-UART1INPROT: Input protocol configuration of the UART1 interface

Input protocol enable flags of the UART1 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-UART1INPROT-UBX	0x10730001	L	-	-	Flag to indicate if UBX should be an input protocol on UART1
CFG-UART1INPROT-NMEA	0x10730002	L	-	-	Flag to indicate if NMEA should be an input protocol on UART1

Table 61: CFG-UART1INPROT configuration items

4.9.28 CFG-UART1OUTPROT: Output protocol configuration of the UART1 interface

Output protocol enable flags of the UART1 interface.

Configuration item	Key ID	Type	Scale	Unit	Description
CFG-UART1OUTPROT-UBX	0x10740001	L	-	-	Flag to indicate if UBX should be an output protocol on UART1
CFG-UART1OUTPROT-NMEA	0x10740002	L	-	-	Flag to indicate if NMEA should be an output protocol on UART1

Table 62: CFG-UART1OUTPROT configuration items

4.10 Legacy UBX message fields reference

The following table lists the legacy UBX message fields and the corresponding configuration item. Note that the mapping from UBX-CFG message fields to configuration items is not necessarily 1:1 and that that some legacy UBX-CFG messages may not be available for certain products.

UBX message and field	Configuration item(s)
UBX-CFG-ANT	
UBX-CFG-ANT.ocd	CFG-HW-ANT_CFG_OPENDET
UBX-CFG-ANT.pdwnOnSCD	CFG-HW-ANT_CFG_PWRDOWN
UBX-CFG-ANT.pinOCD	CFG-HW-ANT_SUP_OPEN_PIN
UBX-CFG-ANT.pinSCD	CFG-HW-ANT_SUP_SHORT_PIN
UBX-CFG-ANT.pinSwitch	CFG-HW-ANT_SUP_SWITCH_PIN
UBX-CFG-ANT.recovery	CFG-HW-ANT_CFG_RECOVER
UBX-CFG-ANT.scd	CFG-HW-ANT_CFG_SHORTDET
UBX-CFG-ANT.svcs	CFG-HW-ANT_CFG_VOLTCTRL
UBX-CFG-DAT	
UBX-CFG-DAT.dX	CFG-NAVSPG-USRDAT_DX
UBX-CFG-DAT.dY	CFG-NAVSPG-USRDAT_DY
UBX-CFG-DAT.dZ	CFG-NAVSPG-USRDAT_DZ
UBX-CFG-DAT.flat	CFG-NAVSPG-USRDAT_FLAT
UBX-CFG-DAT.majA	CFG-NAVSPG-USE_USRDAT, CFG-NAVSPG-USRDAT_MAJA
UBX-CFG-DAT.rotX	CFG-NAVSPG-USRDAT_ROTX
UBX-CFG-DAT.rotY	CFG-NAVSPG-USRDAT_ROTY
UBX-CFG-DAT.rotZ	CFG-NAVSPG-USRDAT_ROTZ

UBX message and field	Configuration item(s)
UBX-CFG-DAT.scale	CFG-NAVSPG-USRDAT_SCALE
UBX-CFG-GNSS	
UBX-CFG-GNSS.gnssId	CFG-SIGNAL-GPS_ENA, CFG-SIGNAL-SBAS_ENA, CFG-SIGNAL-BDS_ENA, CFG-SIGNAL-QZSS_ENA
UBX-CFG-INF	
UBX-CFG-INF.infMsgMask	CFG-INFMSG-UBX_I2C, CFG-INFMSG-UBX_UART1, CFG-INFMSG-UBX_SPI, CFG-INFMSG-NMEA_I2C, CFG-INFMSG-NMEA_UART1, CFG-INFMSG-NMEA_SPI
UBX-CFG-INF.protocolID	CFG-INFMSG-UBX_UART1, CFG-INFMSG-UBX_SPI, CFG-INFMSG-NMEA_I2C, CFG-INFMSG-NMEA_UART1, CFG-INFMSG-NMEA_SPI
UBX-CFG-ITFM	
UBX-CFG-ITFM.antSetting	CFG-ITFM-ANTSETTING
UBX-CFG-ITFM.bbThreshold	CFG-ITFM-BBTHRESHOLD
UBX-CFG-ITFM.cwThreshold	CFG-ITFM-CWTHRESHOLD
UBX-CFG-ITFM.enable	CFG-ITFM-ENABLE
UBX-CFG-ITFM.enable2	CFG-ITFM-ENABLE_AUX
UBX-CFG-MOT	
UBX-CFG-MOT.gnssDistThdl	CFG-MOT-GNSSDIST_THRS
UBX-CFG-MOT.gnssSpeedThdl	CFG-MOT-GNSSSPEED_THRS
UBX-CFG-NAV5	
UBX-CFG-NAV5.cnoThresh	CFG-NAVSPG-INFIL_CNOTHRS
UBX-CFG-NAV5.cnoThreshNumSVs	CFG-NAVSPG-INFIL_NCNOTHRS
UBX-CFG-NAV5.dgnssTimeout	CFG-NAVSPG-CONSTR_DGNSSTO
UBX-CFG-NAV5.dynModel	CFG-NAVSPG-DYNMODEL
UBX-CFG-NAV5.fixMode	CFG-NAVSPG-FIXMODE
UBX-CFG-NAV5.fixedAlt	CFG-NAVSPG-CONSTR_ALT
UBX-CFG-NAV5.fixedAltVar	CFG-NAVSPG-CONSTR_ALTVAR
UBX-CFG-NAV5.minElev	CFG-NAVSPG-INFIL_MINELEV
UBX-CFG-NAV5.pAcc	CFG-NAVSPG-OUTFIL_PACC
UBX-CFG-NAV5.pDop	CFG-NAVSPG-OUTFIL_PDOP
UBX-CFG-NAV5.staticHoldMaxDist	CFG-MOT-GNSSDIST_THRS
UBX-CFG-NAV5.staticHoldThresh	CFG-MOT-GNSSSPEED_THRS
UBX-CFG-NAV5.tAcc	CFG-NAVSPG-OUTFIL_TACC, CFG-NAVSPG-OUTFIL_FACC
UBX-CFG-NAV5.tDop	CFG-NAVSPG-OUTFIL_TDOP
UBX-CFG-NAV5.utcStandard	CFG-NAVSPG-UTCSTANDARD
UBX-CFG-NAVX5	
UBX-CFG-NAVX5.ackAiding	CFG-NAVSPG-ACKAIDING
UBX-CFG-NAVX5.aopOrbMaxErr	CFG-ANA-ORBMAXERR
UBX-CFG-NAVX5.iniFix3D	CFG-NAVSPG-INIFIX3D
UBX-CFG-NAVX5.maxSVs	CFG-NAVSPG-INFIL_MAXSVS
UBX-CFG-NAVX5.minCNO	CFG-NAVSPG-INFIL_MINCNO
UBX-CFG-NAVX5.minSVs	CFG-NAVSPG-INFIL_MINSVS
UBX-CFG-NAVX5.sigAttenCompMode	CFG-NAVSPG-SIGATTCOMP
UBX-CFG-NAVX5.useAOP	CFG-ANA-USE_ANA

UBX message and field	Configuration item(s)
UBX-CFG-NAVX5.wknRollover	CFG-NAVSPG-WKNROLLOVER
UBX-CFG-NMEA	
UBX-CFG-NMEA.bdsTalkerId	CFG-NMEA-BDSTALKERID
UBX-CFG-NMEA.beidou	CFG-NMEA-FILT_BDS
UBX-CFG-NMEA.compat	CFG-NMEA-COMPAT
UBX-CFG-NMEA.consider	CFG-NMEA-CONSIDER
UBX-CFG-NMEA.dateFilt	CFG-NMEA-OUT_INVDATE
UBX-CFG-NMEA.galileo	CFG-NMEA-FILT_GAL
UBX-CFG-NMEA.gps	CFG-NMEA-FILT_GPS
UBX-CFG-NMEA.gpsOnlyFilter	CFG-NMEA-OUT_ONLYGPS
UBX-CFG-NMEA.gsvTalkerId	CFG-NMEA-GSVTALKERID
UBX-CFG-NMEA.highPrec	CFG-NMEA-HIGHPREC
UBX-CFG-NMEA.limit82	CFG-NMEA-LIMIT82
UBX-CFG-NMEA.mainTalkerId	CFG-NMEA-MAINTALKERID
UBX-CFG-NMEA.mskPosFilt	CFG-NMEA-OUT_MSKFIX
UBX-CFG-NMEA.nmeaVersion	CFG-NMEA-PROTVER
UBX-CFG-NMEA.numSV	CFG-NMEA-MAXSVS
UBX-CFG-NMEA.posFilt	CFG-NMEA-OUT_INVFIX
UBX-CFG-NMEA.qzss	CFG-NMEA-FILT_QZSS
UBX-CFG-NMEA.sbas	CFG-NMEA-FILT_SBAS
UBX-CFG-NMEA.svNumbering	CFG-NMEA-SVNUMBERING
UBX-CFG-NMEA.timeFilt	CFG-NMEA-OUT_INVTIME
UBX-CFG-NMEA.trackFilt	CFG-NMEA-OUT_FROZENCOG
UBX-CFG-ODO	
UBX-CFG-ODO.cogLpGain	CFG-ODO-COGLPGAIN
UBX-CFG-ODO.cogMaxPosAcc	CFG-ODO-COGMAXPOSACC
UBX-CFG-ODO.cogMaxSpeed	CFG-ODO-COGMAXSPEED
UBX-CFG-ODO.outLPCog	CFG-ODO-OUTLPCOG
UBX-CFG-ODO.outLPVel	CFG-ODO-OUTLPVEL
UBX-CFG-ODO.profile	CFG-ODO-PROFILE
UBX-CFG-ODO.useCOG	CFG-ODO-USE_COG
UBX-CFG-ODO.useODO	CFG-ODO-USE_ODO
UBX-CFG-ODO.velLpGain	CFG-ODO-VELLPGAIN
UBX-CFG-PRT	
UBX-CFG-PRT.en	CFG-TXREADY-ENABLED
UBX-CFG-PRT.extendedTxTimeout	CFG-I2C-EXTENDEDTIMEOUT
UBX-CFG-PRT.inNmea	CFG-I2CINPROT-NMEA
UBX-CFG-PRT.inProtoMask	CFG-I2C-ENABLED
UBX-CFG-PRT.inUbx	CFG-I2CINPROT-UBX

UBX-CFG-TP5.isLength	CFG-TP-PULSE_LENGTH_DEF
UBX-CFG-TP5.lockGnssFreq	CFG-TP-SYNC_GNSS_TP1
UBX-CFG-TP5.lockedOtherSet	CFG-TP-USE_LOCKED_TP1
UBX-CFG-TP5.polarity	CFG-TP-POL_TP1
UBX-CFG-TP5.pulseLenRatio	CFG-TP-LEN_TP1, CFG-TP-DUTY_TP1
UBX-CFG-TP5.pulseLenRatioLock	CFG-TP-LEN_LOCK_TP1, CFG-TP-DUTY_LOCK_TP1
UBX-CFG-TP5.userConfigDelay	CFG-TP-USER_DELAY_TP1

Table 63: Legacy UBX message fields and the corresponding configuration items

Configuration defaults

The following tables contain the configuration defaults for the firmware. Some of these values may be changed in production. Refer to the integration manual for product-specific details.

Configuration item	Key ID	Type	Scale	Unit	Default value
CFG-ANA-USE_ANA	0x10230001	L	-	-	0 (false)
CFG-ANA-ORBMAXERR	0x30230002	U2	-	m	100

Table 64: CFG-ANA configuration defaults

Configuration item	Key ID	Type	Scale	Unit	Default value
CFG-BDS-USE_GEO_PRN	0x10340014	L	-	-	1 (true)

Table 65: CFG-BDS configuration defaults

Configuration item	Key ID	Type	Scale	Unit	Default value
CFG-HW-ANT_CFG_VOLTCTRL	0x10a3002e	L	-	-	0 (false)
CFG-HW-ANT_CFG_SHORTDET	0x10a3002f	L	-	-	0 (false)
CFG-HW-ANT_CFG_SHORTDET_POL	0x10a30030	L	-	-	1 (true)
CFG-HW-ANT_CFG_OPENDET	0x10a30031	L	-	-	0 (false)
CFG-HW-ANT_CFG_OPENDET_POL	0x10a30032	L	-	-	1 (true)
CFG-HW-ANT_CFG_PWRDOWN	0x10a30033	L	-	-	0 (false)
CFG-HW-ANT_CFG_PWRDOWN_POL	0x10a30034	L	-	-	1 (true)
CFG-HW-ANT_CFG_RECOVER	0x10a30035	L	-	-	0 (false)
